MITSUBISHI ELECTRIC

Changes for the Better

MITSUBISHI CNC

Specifications Manual

MDS-E/EH Series

IB-1501226(ENG)-C

Introduction

Thank you for selecting the Mitsubishi numerical control unit. This instruction manual describes the handling and caution points for using this AC servo/spindle. Incorrect handling may lead to unforeseen accidents, so always read this instruction manual thoroughly to ensure correct usage.
In order to confirm if all function specifications described in this manual are applicable, refer to the specifications for each CNC.

Notes on Reading This Manual

(1) Since the description of this specification manual deals with NC in general, for the specifications of individual machine tools, refer to the manuals issued by the respective machine manufacturers. The "restrictions" and "available functions" described in the manuals issued by the machine manufacturers have precedence to those in this manual.
(2) This manual describes as many special operations as possible, but it should be kept in mind that items not mentioned in this manual cannot be performed.

Precautions for Safety

Please read this manual and auxiliary documents before starting installation, operation, maintenance or inspection to ensure correct usage. Thoroughly understand the device, safety information and precautions before starting operation.
The safety precautions in this instruction manual are ranked as "WARNING" and "CAUTION".

⚠ DANGER

When there is a potential risk of fatal or serious injuries if handling is mistaken.

⚠ WARNING

When a dangerous situation, or fatal or serious injuries may occur if handling is mistaken.

⚠ CAUTION

When a dangerous situation may occur if handling is mistaken leading to medium or minor injuries, or physical damage.

Note that some items described as "⚠CAUTION" may lead to major results depending on the situation. In any case, important information that must be observed is described.

The signs indicating prohibited and mandatory matters are explained below.

	**Indicates a prohibited matter. For example, "Fire Prohibited" is indicated as  .**
	**Indicates a mandatory matter. For example, grounding is indicated as  .**

The meaning of each pictorial sign is as follows.

 **CAUTION**	 **CAUTION rotated object**	 **CAUTION HOT**	 **Danger Electric shock risk**	 **Danger explosive**
 **Prohibited**	 **Disassembly is prohibited**	 **KEEP FIRE AWAY**	 **General instruction**	 **Earth ground**

After reading this specifications and instructions manual, store it where the user can access it easily for reference.

The numeric control unit is configured of the control unit, operation board, servo drive unit, spindle drive unit, power supply, servo motor and spindle motor, etc.
In this section "Precautions for safety", the following items are generically called the "motor".

- Servo motor
- Linear servo motor
- Spindle motor
- Direct-drive motor

In this section "Precautions for safety", the following items are generically called the "unit".

- Servo drive unit
- Spindle drive unit
- Power supply unit
- Scale interface unit
- Magnetic pole detection unit

 **POINT**

Important matters that should be understood for operation of this machine are indicated as a POINT in this manual.

⚠ WARNING

1. Electric shock prevention

- **Do not open the front cover while the power is ON or during operation. Failure to observe this could lead to electric shocks.**
- **Do not operate the unit with the front cover removed. The high voltage terminals and charged sections will be exposed, and can cause electric shocks.**
- **Do not remove the front cover and connector even when the power is OFF unless carrying out wiring work or periodic inspections. The inside of the units is charged, and can cause electric shocks.**
- **Since the high voltage is supplied to the main circuit connector while the power is ON or during operation, do not touch the main circuit connector with an adjustment screwdriver or the pen tip. Failure to observe this could lead to electric shocks.**
- **Wait at least 15 minutes after turning the power OFF, confirm that the CHARGE lamp has gone out, and check the voltage between P and N terminals with a tester, etc., before starting wiring, maintenance or inspections. Failure to observe this could lead to electric shocks.**
- **Ground the unit and motor. For the motor, ground it via the drive unit.**
- **Wiring, maintenance and inspection work must be done by a qualified technician.**
- **Wire the servo drive unit and servo motor after installation. Failure to observe this could lead to electric shocks.**
- **Do not touch the switches with wet hands. Failure to observe this could lead to electric shocks.**
- **Do not damage, apply forcible stress, place heavy items on the cables or get them caught. Failure to observe this could lead to electric shocks.**
- **Always insulate the power terminal connection section. Failure to observe this could lead to electric shocks.**
- **After assembling the built-in IPM spindle motor, if the rotor is rotated by hand etc., voltage occurs between the terminals of lead. Take care not to get electric shocks.**

⚠ WARNING

2. Injury prevention

⚠ **When handling a motor, perform operations in safe clothing.**

⚠ **In the system where the optical communication with CNC is executed, do not see directly the light generated from CN1A/CN1B connector of drive unit or the end of cable. When the light gets into eye, you may feel something is wrong for eye.**
(The light source of optical communication corresponds to class1 defined in JISC6802 or IEC60825-1.)

⚠ **The linear servo motor, direct-drive motor and built-in IPM spindle motor uses permanent magnets in the rotor, so observe the following precautions.**

(1)Handling

- The linear servo motor, direct-drive motor and built-in IPM spindle motor could adversely affect medical electronics such as pacemakers, etc., therefore, do not approach the rotor.
- Do not place magnetic materials as iron.
- When a magnetic material as iron is placed, take safety measure not to pinch fingers or hands due to the magnetic attraction force.
- Remove metal items such as watch, piercing jewelry, necklace, etc.
- Do not place portable items that could malfunction or fail due to the influence of the magnetic force.
- When the rotor is not securely fixed to the machine or device, do not leave it unattended but store it in the package properly.
- When installing the motor to the machine, take it out from the package one by one, and then install it.
- It is highly dangerous to lay out the motor or magnetic plates together on the table or pallet, therefore never do so.

(2)Transportation and storage

- Correctly store the rotor in the package to transport and store.
- During transportation and storage, draw people's attention by applying a notice saying "Strong magnet-Handle with care" to the package or storage shelf.
- Do not use a damaged package.

(3)Installation

- Take special care not to pinch fingers, etc., when installing (and unpacking) the linear servo motor.

⚠ CAUTION

1. Fire prevention

- **Install the units, motors and regenerative resistor on non-combustible material. Direct installation on combustible material or near combustible materials could lead to fires.**
- **Always install a circuit protector and contactor on the servo drive unit power input as explained in this manual. Refer to this manual and select the correct circuit protector and contactor. An incorrect selection could result in fire.**
- **Shut off the power on the unit side if a fault occurs in the units. Fires could be caused if a large current continues to flow.**
- **When using a regenerative resistor, provide a sequence that shuts off the power with the regenerative resistor's error signal. The regenerative resistor could abnormally overheat and cause a fire due to a fault in the regenerative transistor, etc.**
- **The battery unit could heat up, ignite or rupture if submerged in water, or if the poles are incorrectly wired.**
- **Cut off the main circuit power with the contactor when an alarm or emergency stop occurs.**

2. Injury prevention

- **Do not apply a voltage other than that specified in this manual, on each terminal. Failure to observe this item could lead to ruptures or damage, etc.**
- **Do not mistake the terminal connections. Failure to observe this item could lead to ruptures or damage, etc.**
- **Do not mistake the polarity (+,-). Failure to observe this item could lead to ruptures or damage, etc.**
- **Do not touch the radiation fin on unit back face, regenerative resistor or motor, etc., or place parts (cables, etc.) while the power is turned ON or immediately after turning the power OFF. These parts may reach high temperatures, and can cause burns or part damage.**
- **Structure the cooling fan on the unit back face, etc., so that it cannot be touched after installation. Touching the cooling fan during operation could lead to injuries.**
- **Take care not to suck hair, clothes, etc. into the cooling fan.**

⚠ CAUTION

3. Various precautions

Observe the following precautions. Incorrect handling of the unit could lead to faults, injuries and electric shocks, etc.

(1) Transportation and installation

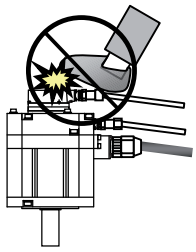
⚠ **Correctly transport the product according to its weight.**

❗ **Use the motor's hanging bolts only when transporting the motor. Do not transport the machine when the motor is installed on the machine.**

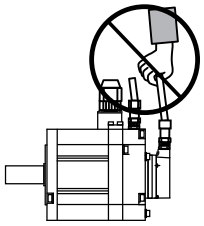
⚠ **Do not stack the products above the tolerable number.**

⚠ **Follow this manual and install the unit or motor in a place where the weight can be borne.**

⚠ **Do not get on top of or place heavy objects on the unit.**



⚠ **Do not hold the cables, axis or encoder when transporting the motor.**



⚠ **Do not hold the connected wires or cables when transporting the units.**

⚠ **Do not hold the front cover when transporting the unit. The unit could drop.**

⚠ **Always observe the installation directions of the units or motors.**

⚠ **Secure the specified distance between the units and control panel, or between the servo drive unit and other devices.**

⚠ **Do not install or run a unit or motor that is damaged or missing parts.**

⚠ **Do not block the intake or exhaust ports of the motor provided with a cooling fan.**

⚠ **Do not let foreign objects enter the units or motors. In particular, if conductive objects such as screws or metal chips, etc., or combustible materials such as oil enter, rupture or breakage could occur.**

⚠ **Provide adequate protection using a material such as connector for conduit to prevent screws, metallic detritus, water and other conductive matter or oil and other combustible matter from entering the motor through the power line lead-out port.**

⚠ **The units, motors and encoders are precision devices, so do not drop them or apply strong impacts to them.**

⚠ CAUTION

⚠ **Store and use the units under the following environment conditions.**

Environment	Unit	Motor
Ambient temperature	Operation: 0 to 55°C (with no freezing), Storage / Transportation: -15°C to 70°C (with no freezing)	Operation: 0 to 40°C (with no freezing), Storage: -15°C to 70°C (Note2) (with no freezing)
Ambient humidity	Operation: 90%RH or less (with no dew condensation) Storage / Transportation: 90%RH or less (with no dew condensation)	Operation: 80%RH or less (with no dew condensation), Storage: 90%RH or less (with no dew condensation)
Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles	
Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 13000 meters or less above sea level	Operation: 1000 meters or less above sea level, Storage: 10000 meters or less above sea level
Vibration/impact	According to each unit or motor specification	

(Note 1) For details, confirm each unit or motor specifications in addition.
(Note 2) -15°C to 55°C for linear servo motor.

⚠ **When disinfectants or insecticides must be used to treat wood packaging materials, always use methods other than fumigation (for example, apply heat treatment at the minimum wood core temperature of 56 °C for a minimum duration of 30 minutes (ISPM No. 15 (2009))).**
If products such as units are directly fumigated or packed with fumigated wooden materials, halogen substances (including fluorine, chlorine, bromine and iodine) contained in fumes may contribute to the erosion of the capacitors.
When exporting the products, make sure to comply with the laws and regulations of each country.

⚠ **Do not use the products in conjunction with any components that contain halogenated flame retardants (bromine, etc). Failure to observe this may cause the erosion of the capacitors.**

⚠ **Securely fix the servo motor to the machine. Insufficient fixing could lead to the servo motor slipping off during operation.**

⚠ **Always install the servo motor with reduction gear in the designated direction. Failure to do so could lead to oil leaks.**

⚠ **Structure the rotary sections of the motor so that it can never be touched during operation. Install a cover, etc., on the shaft.**

⚠ **When installing a coupling to a servo motor shaft end, do not apply an impact by hammering, etc. The encoder could be damaged.**

⚠ **Do not apply a load exceeding the tolerable load onto the servo motor shaft. The shaft could break.**

⚠ **Store the motor in the package box.**

⚠ **When inserting the shaft into the built-in IPM spindle motor, do not heat the rotor higher than 130°C. The magnet could be demagnetized, and the specifications characteristics will not be ensured.**

⚠ **Always use a nonmagnetic tool (explosion-proof beryllium copper alloy safety tool: NGK Insulators, etc.) when installing the built-in IPM spindle motor, direct-drive motor and linear servo motor.**

⚠ **Always provide a mechanical stopper on the end of the linear servo motor's travel path.**

❗ **If the unit has been stored for a long time, always check the operation before starting actual operation. Please contact the Service Center, Service Station, Sales Office or delayer.**

⚠ **Install the heavy peripheral devices to the lower part in the panel and securely fix it not to be moved due to vibration.**

⚠ CAUTION

(2) Wiring

⚠ **Correctly and securely perform the wiring. Failure to do so could lead to abnormal operation of the motor.**

⚠ **Do not install a condensing capacitor, surge absorber or radio noise filter on the output side of the drive unit.**

⚠ **Correctly connect the output side of the drive unit (terminals U, V, W). Failure to do so could lead to abnormal operation of the motor.**

⚠ **When using a power regenerative power supply unit, always install an AC reactor for each power supply unit.**

⚠ **In the main circuit power supply side of the unit, always install an appropriate circuit protector or contactor for each unit. Circuit protector or contactor cannot be shared by several units.**

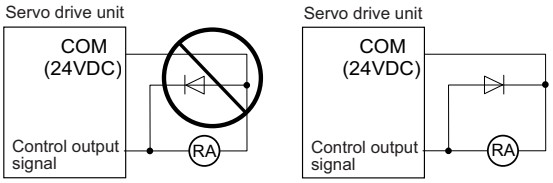
⚠ **Always connect the motor to the drive unit's output terminals (U, V, W).**

⚠ **Do not directly connect a commercial power supply to the servo motor. Failure to observe this could result in a fault.**

⚠ **When using an inductive load such as a relay, always connect a diode as a noise measure parallel to the load.**

⚠ **When using a capacitance load such as a lamp, always connect a protective resistor as a noise measure serial to the load.**

⚠ **Do not reverse the direction of a diode which connect to a DC relay for the control output signals such as contractor and motor brake output, etc. to suppress a surge. Connecting it backwards could cause the drive unit to malfunction so that signals are not output, and emergency stop and other safety circuits are inoperable.**



⚠ **Do not connect/disconnect the cables connected between the units while the power is ON.**

⚠ **Securely tighten the cable connector fixing screw or fixing mechanism. An insecure fixing could cause the cable to fall off while the power is ON.**

⚠ **When using a shielded cable instructed in the instruction manual, always ground the cable with a cable clamp, etc. (Refer to "EMC Installation Guidelines")**

⚠ **Always separate the signals wires from the drive wire and power line.**

⚠ **Use wires and cables that have a wire diameter, heat resistance and flexibility that conforms to the system.**

(3) Trial operation and adjustment

⚠ **Check and adjust each program and parameter before starting operation. Failure to do so could lead to unforeseen operation of the machine.**

⚠ **Do not make remarkable adjustments and changes of parameter as the operation could become unstable.**

⚠ **The usable motor and unit combination is predetermined. Always check the combinations and parameters before starting trial operation.**

⚠ **The direct-drive motor and linear servo motor do not have a stopping device such as magnetic brakes. Install a stopping device on the machine side.**

⚠ **When using the linear servo motor for an unbalance axis, adjust the unbalance weight to 0 by installing an air cylinder, etc. on the machine side. The unbalance weight disables the initial magnetic pole adjustment.**

⚠ CAUTION

(4) Usage methods

In abnormal state, install an external emergency stop circuit so that the operation can be stopped and power shut off immediately.

Turn the power OFF immediately if smoke, abnormal noise or odors are generated from the unit or motor.

Do not disassemble or repair this product.

Never make modifications.

When an alarm occurs, the machine will start suddenly if an alarm reset (RST) is carried out while an operation start signal (ST) is being input. Always confirm that the operation signal is OFF before carrying out an alarm reset. Failure to do so could lead to accidents or injuries.

Reduce magnetic damage by installing a noise filter. The electronic devices used near the unit could be affected by magnetic noise. Install a line noise filter, etc., if there is a risk of magnetic noise.

Use the unit, motor and regenerative resistor with the designated combination. Failure to do so could lead to fires or trouble.

The brake (magnetic brake) of the servo motor are for holding, and must not be used for normal braking.

There may be cases when holding is not possible due to the magnetic brake's life, the machine construction (when ball screw and servo motor are coupled via a timing belt, etc.) or the magnetic brake's failure. Install a stop device to ensure safety on the machine side.

After changing the programs/parameters or after maintenance and inspection, always test the operation before starting actual operation.

Do not enter the movable range of the machine during automatic operation. Never place body parts near or touch the spindle during rotation.

Follow the power supply specification conditions given in each specification for the power (input voltage, input frequency, tolerable sudden power failure time, etc.).

Set all bits to "0" if they are indicated as not used or empty in the explanation on the bits.

Do not use the dynamic brakes except during the emergency stop. Continued use of the dynamic brakes could result in brake damage.

If a circuit protector for the main circuit power supply is shared by several units, the circuit protector may not activate when a short-circuit fault occurs in a small capacity unit. This is dangerous, so never share the circuit protector.

Mitsubishi spindle motor is dedicated to machine tools. Do not use for other purposes.

(5) Troubleshooting

If a hazardous situation is predicted during power failure or product trouble, use a servo motor with magnetic brakes or install an external brake mechanism.

Always turn the main circuit power of the motor OFF when an alarm occurs.

If an alarm occurs, remove the cause, and secure the safety before resetting the alarm.

⚠ CAUTION

(6) Maintenance, inspection and part replacement

⚠ **Always backup the programs and parameters before starting maintenance or inspections.**

⚠ **The capacity of the electrolytic capacitor will drop over time due to self-discharging, etc. To prevent secondary disasters due to failures, replacing this part every five years when used under a normal environment is recommended. Contact the Service Center, Service Station, Sales Office or delayer for repairs or part replacement.**

⚠ **Do not perform a megger test (insulation resistance measurement) during inspections.**

⚠ **If the battery low warning is issued, immediately replace the battery. Replace the batteries while applying the drive unit's control power.**

⚠ **Do not short circuit, charge, overheat, incinerate or disassemble the battery.**

⚠ **For after-purchase servicing of the built-in motor, only the servicing parts for MITSUBISHI encoder can be supplied. For the motor body, prepare the spare parts at the machine manufacturers.**

⚠ **For maintenance, part replacement, and services in case of failures in the built-in motor (including the encoder), take necessary actions at the machine manufacturers. For drive unit, Mitsubishi can offer the after-purchase servicing as with the general drive unit.**

(7) Disposal

⚠ **Take the batteries and backlights for LCD, etc., off from the controller, drive unit and motor, and dispose of them as general industrial wastes.**

⚠ **Do not disassemble the unit or motor.**

⚠ **Dispose of the battery according to local laws.**

⚠ **Always return the secondary side (magnet side) of the linear servo motor to the Service Center or Service Station.**

⚠ **When incinerating optical communication cable, hydrogen fluoride gas or hydrogen chloride gas which is corrosive and harmful may be generated. For disposal of optical communication cable, request for specialized industrial waste disposal services that has incineration facility for disposing hydrogen fluoride gas or hydrogen chloride gas.**

(8) Transportation

⚠ **The unit and motor are precision parts and must be handled carefully.**

⚠ **According to a United Nations Advisory, the battery unit and battery must be transported according to the rules set forth by the International Civil Aviation Organization (ICAO), International Air Transportation Association (IATA), International Maritime Organization (IMO), and United States Department of Transportation (DOT), etc.**

(9) General precautions

The drawings given in this manual show the covers and safety partitions, etc., removed to provide a clearer explanation. Always return the covers or partitions to their respective places before starting operation, and always follow the instructions given in this manual.

Treatment of waste

The following two laws will apply when disposing of this product. Considerations must be made to each law. The following laws are in effect in Japan. Thus, when using this product overseas, the local laws will have a priority. If necessary, indicate or notify these laws to the final user of the product.

(1) Requirements for "Law for Promotion of Effective Utilization of Resources"
   (a) Recycle as much of this product as possible when finished with use.
   (b) When recycling, often parts are sorted into steel scraps and electric parts, etc., and sold to scrap contractors. Mitsubishi recommends sorting the product and selling the members to appropriate contractors.

(2) Requirements for "Law for Treatment of Waste and Cleaning"
   (a) Mitsubishi recommends recycling and selling the product when no longer needed according to item (1) above. The user should make an effort to reduce waste in this manner.
   (b) When disposing a product that cannot be resold, it shall be treated as a waste product.
   (c) The treatment of industrial waste must be commissioned to a licensed industrial waste treatment contractor, and appropriate measures, including a manifest control, must be taken.
   (d) Batteries correspond to "primary batteries", and must be disposed of according to local disposal laws.

Disposal

(Note) This symbol mark is for EU countries only.
This symbol mark is according to the directive 2006/66/EC Article 20 Information for end-users and Annex II.

Your MITSUBISHI ELECTRIC product is designed and manufactured with high quality materials and components which can be recycled and/or reused.
This symbol means that batteries and accumulators, at their end-of-life, should be disposed of separately from your household waste.
If a chemical symbol is printed beneath the symbol shown above, this chemical symbol means that the battery or accumulator contains a heavy metal at a certain concentration. This will be indicated as follows:
Hg: mercury (0,0005%), Cd: cadmium (0,002%), Pb: lead (0,004%)
In the European Union there are separate collection systems for used batteries and accumulators.
Please, dispose of batteries and accumulators correctly at your local community waste collection/ recycling centre.

Please, help us to conserve the environment we live in!

Trademarks

MELDAS, MELSEC, EZSocket, EZMotion, iQ Platform, MELSOFT, GOT, CC-Link, CC-Link/LT and CC-Link IE are either trademarks or registered trademarks of Mitsubishi Electric Corporation in Japan and/or other countries.

Other company and product names that appear in this manual are trademarks or registered trademarks of the respective companies.

本製品の取扱いについて

(日本語 /Japanese)
本製品は工業用 (クラス A) 電磁環境適合機器です。販売者あるいは使用者はこの点に注意し、住商業環境以外での使用をお願いいたします。

Handling of our product

(English)
This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

본 제품의 취급에 대해서

(한국어 /Korean)
이 기기는 업무용 (A 급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며 가정외의 지역에서 사용하는 것을 목적으로 합니다 .

WARRANTY

Please confirm the following product warranty details before using MITSUBISHI CNC.

1. Warranty Period and Coverage

Should any fault or defect (hereafter called "failure") for which we are liable occur in this product during the warranty period, we shall provide repair services at no cost through the distributor from which the product was purchased or through a Mitsubishi Electric service provider. Note, however that this shall not apply if the customer was informed prior to purchase of the product that the product is not covered under warranty. Also note that we are not responsible for any on-site readjustment and/or trial run that may be required after a defective unit is replaced.

[Warranty Term]
The term of warranty for this product shall be twenty-four (24) months from the date of delivery of product to the end user, provided the product purchased from us in Japan is installed in Japan (but in no event longer than thirty (30) months, Including the distribution time after shipment from Mitsubishi Electric or its distributor).
Note that, for the case where the product purchased from us in or outside Japan is exported and installed in any country other than where it was purchased; please refer to "2. Service in overseas countries" as will be explained.

[Limitations]
(1) The customer is requested to conduct an initial failure diagnosis by him/herself, as a general rule. It can also be carried out by us or our service provider upon the customer's request and the actual cost will be charged.
(2) This warranty applies only when the conditions, method, environment, etc., of use are in compliance with the terms and conditions and instructions that are set forth in the instruction manual, user's manual, and the caution label affixed to the product, etc.
(3) Even during the term of warranty, repair costs shall be charged to the customer in the following cases:
  (a) a failure caused by improper storage or handling, carelessness or negligence, etc., or a failure caused by the customer's hardware or software problem
  (b) a failure caused by any alteration, etc., to the product made by the customer without Mitsubishi Electric's approval
  (c) a failure which may be regarded as avoidable, if the customer's equipment in which this product is incorporated is equipped with a safety device required by applicable laws or has any function or structure considered to be indispensable in the light of common sense in the industry
  (d) a failure which may be regarded as avoidable if consumable parts designated in the instruction manual, etc. are duly maintained and replaced
  (e) any replacement of consumable parts (including a battery, relay and fuse)
  (f) a failure caused by external factors such as inevitable accidents, including without limitation fire and abnormal fluctuation of voltage, and acts of God, including without limitation earthquake, lightning, and natural disasters
  (g) a failure which is unforeseeable under technologies available at the time of shipment of this product from our company
  (h) any other failures which we are not responsible for or which the customer acknowledges we are not responsible for

2. Service in Overseas Countries

If the customer installs the product purchased from us in his/her machine or equipment, and export it to any country other than where he/she bought it, the customer may sign a paid warranty contract with our local FA center.
This falls under the case where the product purchased from us in or outside Japan is exported and installed in any country other than where it was purchased.
For details please contact the distributor from which the customer purchased the product.

3. Exclusion of Loss in Opportunity and Secondary Loss from Warranty Liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:
(1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
(2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
(3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
(4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

4. Changes in Product Specifications

Specifications shown in our catalogs, manuals or technical documents are subject to change without notice.

5. Product Application

(1) For the use of this product, its applications should be those that may not result in a serious damage even if any failure or malfunction occurs in the product, and a backup or fail-safe function should operate on an external system to the product when any failure or malfunction occurs.
(2) Mitsubishi CNC is designed and manufactured solely for applications to machine tools to be used for industrial purposes. Do not use this product in any applications other than those specified above, especially those which are substantially influential on the public interest or which are expected to have significant influence on human lives or properties.

3.5.1 Contactor Control Function 101
3.5.2 Motor Brake Control Function 101
3.5.3 External Emergency Stop Function 101
3.5.4 Specified Speed Output 101
3.5.5 Quick READY ON Sequence 101
3.6 Diagnosis Function 102
3.6.1 Monitor Output Function 102
3.6.2 Machine Resonance Frequency Display Function 103
3.6.3 Machine Inertia Display Function 103
3.6.4 Motor Temperature Display Function 103
3.6.5 Load Monitor Output Function 103
3.6.6 Open Loop Control Function 103
3.6.7 Power Supply Diagnosis Display Function 103
3.6.8 Drive Unit Diagnosis Display Function 103
4 Characteristics 105
4.1 Servo Motor 106
4.1.1 Environmental Conditions 106
4.1.2 Quakeproof Level 106
4.1.3 Shaft Characteristics 107
4.1.4 Machine Accuracy 108
4.1.5 Oil / Water Standards 108
4.1.6 Installation of Servo Motor 109
4.1.7 Overload Protection Characteristics 110
4.1.8 Magnetic Brake 115
4.1.9 Dynamic Brake Characteristics 119
4.2 Spindle Motor 121
4.2.1 Environmental Conditions 121
4.2.2 Shaft Characteristics 121
4.2.3 Machine Accuracy 122

4.2.4 Installation of Spindle Motor 122
4.3 Tool Spindle Motor 123
4.3.1 Environmental Conditions 123
4.3.2 Shaft Characteristics 123
4.3.3 Tool Spindle Temperature Characteristics 124
4.3.4 Installation of Tool Spindle Motor 124
4.4 Drive Unit 125
4.4.1 Environmental Conditions 125
4.4.2 Heating Value 126
4.4.3 Drive Unit Arrangement 127
5 Dedicated Options 129
5.1 Servo Options 130
5.1.1 Dynamic Brake Unit (MDS-D-DBU) 135
5.1.2 Battery Option (MDS-BAT6V1SET, MDSBTBOX-LR2060) 137
5.1.3 Ball Screw Side Encoder (OSA405ET2AS, OSA676ET2AS) 141
5.1.4 Machine Side Encoder 143
5.1.5 Twin-head Magnetic Encoder (MBA Series) 148
5.2 Spindle Options 152
5.2.1 Spindle Side ABZ Pulse Output Encoder (OSE-1024 Series) 153
5.2.2 Spindle Side PLG Serial Output Encoder (TS5690, MU1606 Series) 155
5.2.3 Twin-head Magnetic Encoder (MBE Series) 178
5.2.4 Spindle Side Accuracy Serial Output Encoder (ERM280, MPCI Series) (Other Manufacturer's Product) 182
5.2.5 Machine Side Encoder 182
5.3 Encoder Interface Unit 183
5.3.1 Serial Output Interface Unit for ABZ Analog Encoder MDS-B-HR 183
5.3.2 Serial Signal Division Unit MDS-B-SD 186
5.3.3 Pulse Output Interface Unit for ABZ Analog Encoder IBV Series (Other Manufacturer's Product) 188
5.3.4 Serial Output Interface Unit for ABZ Analog Encoder EIB192M (Other Manufacturer's Product) 189
5.3.5 Serial Output Interface Unit for ABZ Analog Encoder EIB392M (Other Manufacturer's Product) 190
5.3.6 Serial Output Interface Unit for ABZ Analog Encoder ADB-20J Series (Other Manufacturer's Product) 191
5.4 Drive Unit Option 192
5.4.1 DC Connection Bar 192
5.4.2 Side Protection Cover 193
5.4.3 Power Backup Unit (MDS-D/DH-PFU) 194
5.4.4 Regenerative Resistors for Power Backup Unit (R-UNIT-6,7) 198
5.4.5 Capacitor Unit for Power Backup Unit (MDS-D/DH-CU) 200
5.5 Cables and Connectors 202
5.5.1 Cable Connection Diagram 202
5.5.2 List of Cables and Connectors 204
5.5.3 Optical Communication Cable Specifications 214
6 Specifications of Peripheral Devices 217
6.1 Selection of Wire 218
6.1.1 Example of Wires by Unit 218
6.2 Selection of Circuit Protector and Contactor 225
6.2.1 Selection of Circuit Protector 225
6.2.2 Selection of Contactor 226
6.3 Selection of Earth Leakage Breaker 227
6.4 Branch-circuit Protection (for Control Power Supply) 228
6.4.1 Circuit Protector 228
6.4.2 Fuse Protection 228
6.5 Noise Filter 229
6.6 Surge Absorber 230
6.7 Relay 231
6.8 Selection of Link Bar 234

6.8.1 Wire Size for L11 and L21 Link Bar 234
6.8.2 Wire Size for L+ and L- Link Bar 234
7 Selection 237
7.1 Selection of the Servo Motor 238
7.1.1 Outline 238
7.1.2 Selection of Servo Motor Capacity 239
7.1.3 Motor Shaft Conversion Load Torque 246
7.1.4 Expressions for Load Inertia Calculation 247
7.2 Selection of the Spindle Motor 248
7.3 Selection of the Power Supply Unit 249
7.3.1 Calculation of Spindle Output 249
7.3.2 Calculation of Servo Motor Output 251
7.3.3 Selection of the Power Supply Unit 252
7.3.4 Required Capacity of Power Supply 253
7.3.5 Example for Power Supply Unit and Power Supply Facility Capacity 254

Outline for MDS-E/EH Series Instruction Manual (IB-1501229(ENG)-C)

1 Installation

1.1 Installation of Servo Motor
- 1.1.1 Environmental Conditions
- 1.1.2 Quakeproof Level
- 1.1.3 Cautions for Mounting Load (Prevention of Impact on Shaft)
- 1.1.4 Installation Direction
- 1.1.5 Shaft Characteristics
- 1.1.6 Machine Accuracy
- 1.1.7 Coupling with the Load
- 1.1.8 Oil / Water Standards
- 1.1.9 Installation of Servo Motor
- 1.1.10 Cable Stress

1.2 Installation of Spindle Motor
- 1.2.1 Environmental Conditions
- 1.2.2 Balancing the Spindle Motor (Unit)
- 1.2.3 Shaft Characteristics
- 1.2.4 Machine Accuracy
- 1.2.5 Coupling with the Fittings
- 1.2.6 Ambient Environment
- 1.2.7 Installation of Spindle Motor
- 1.2.8 Connection
- 1.2.9 Installation of the Terminal Box Cover
- 1.2.10 Cable Stress

1.3 Installation of the Drive Unit
- 1.3.1 Environmental Conditions
- 1.3.2 Installation Direction and Clearance
- 1.3.3 Prevention of Entering of Foreign Matter
- 1.3.4 Panel Installation Hole Work Drawings (Panel Cut Drawings)
- 1.3.5 Heating Value
- 1.3.6 Heat Radiation Countermeasures

1.4 Installation of the Machine End Encoder
- 1.4.1 Spindle Side ABZ Pulse Output Encoder (OSE-1024 Series)
- 1.4.2 Spindle Side PLG Serial Output Encoder (TS5690, MU1606 Series)
- 1.4.3 Twin-head Magnetic Encoder (MBA405W, MBE405W Series)

1.5 Noise Measures

2 Wiring and Connection

2.1 Part System Connection Diagram

2.2 Main Circuit Terminal Block/Control Circuit Connector
- 2.2.1 Names and Applications of Main Circuit Terminal Block Signals and Control Circuit Connectors
- 2.2.2 Connector Pin Assignment
- 2.2.3 Main Circuit Connector (TE1) Wiring Method

2.3 NC and Drive Unit Connection

2.4 Motor and Encoder Connection
- 2.4.1 Connection of the Servo Motor
- 2.4.2 Connection of the Full-closed Loop System
- 2.4.3 Connection of the Speed Command Synchronization Control System
- 2.4.4 Connection of the Spindle Motor
- 2.4.5 Connection of Tool Spindle Motor

2.5 Connection of Power Supply
- 2.5.1 Power Supply Input Connection
- 2.5.2 Connection of the Grounding Cable

2.6 Wiring of the Motor Brake
- 2.6.1 Wiring of the Motor Magnetic Brake
- 2.6.2 Dynamic Brake Unit Wiring

2.7 Peripheral Control Wiring
- 2.7.1 Input/Output Circuit Wiring
- 2.7.2 Specified Speed Output
- 2.7.3 Spindle Coil Changeover
- 2.7.4 Proximity Switch Orientation

3 Safety Function

3.1 Safety Function
- 3.1.1 Harmonized Standard
- 3.1.2 Outline of Safety Function

3.2 STO (Safe Torque Off) Function

3.3 SBC (Safe Brake Control) Function

4 Setup

4.1 Initial Setup
- 4.1.1 Setting the Rotary Switch
- 4.1.2 Setting DIP Switch
- 4.1.3 Transition of LED Display After Power Is Turned ON

4.2 Setting the Initial Parameters for the Servo Drive Unit
- 4.2.1 Setting of Servo Specification Parameters
- 4.2.2 Setting of Machine Side Encoder
- 4.2.3 Setting of Distance-coded Reference Scale
- 4.2.4 Setting of Speed Command Synchronous Control
- 4.2.5 List of Standard Parameters for Each Servo Motor
- 4.2.6 Servo Parameters

4.3 Setting the Initial Parameters for the Spindle Drive Unit
- 4.3.1 Setting of Parameters Related to the Spindle
- 4.3.2 List of Standard Parameters for Each Spindle Motor
- 4.3.3 Spindle Specification Parameters
- 4.3.4 Spindle Parameters
- 4.3.5 Spindle-type Servo Parameters

5 Servo Adjustment

5.1 Servo Adjustment Procedure

5.2 Gain Adjustment
- 5.2.1 Current Loop Gain
- 5.2.2 Speed Loop Gain
- 5.2.3 Position Loop Gain
- 5.2.4 OMR-FF Function

5.3 Characteristics Improvement
- 5.3.1 Optimal Adjustment of Cycle Time
- 5.3.2 Vibration Suppression Measures
- 5.3.3 Improving the Cutting Surface Precision
- 5.3.4 Improvement of Characteristics during Acceleration/Deceleration

5.3.5 Improvement of Protrusion at Quadrant Changeover
5.3.6 Improvement of Overshooting
5.3.7 Improvement of the Interpolation Control Path
5.4 Adjustment during Full Closed Loop Control
5.4.1 Outline
5.4.2 Speed Loop Delay Compensation
5.4.3 Dual Feedback Control
5.5 Settings for Emergency Stop
5.5.1 Deceleration Control
5.5.2 Vertical Axis Drop Prevention Control
5.5.3 Vertical Axis Pull-up Control
5.6 Protective Functions
5.6.1 Overload Detection
5.6.2 Excessive Error Detection
5.6.3 Collision Detection Function
5.7 Servo Control Signal
5.7.1 Servo Control Input (NC to Servo)
5.7.2 Servo Control Output (Servo to NC)

6 Spindle Adjustment

6.1 Adjustment Procedures for Each Control
6.1.1 Basic Adjustments
6.1.2 Gain Adjustment
6.1.3 Adjusting the Acceleration/Deceleration Operation
6.1.4 Orientation Adjustment
6.1.5 Synchronous Tapping Adjustment
6.1.6 High-speed Synchronous Tapping
6.1.7 Spindle C Axis Adjustment (For Lathe System)
6.1.8 Spindle Synchronization Adjustment (For Lathe System)
6.1.9 Deceleration Coil Changeover Valid Function by Emergency Stop
6.1.10 High-response Acceleration/Deceleration Function
6.1.11 Spindle Cutting Withstand Level Improvement
6.1.12 Spindle Motor Temperature Compensation Function
6.2 Settings for Emergency Stop
6.2.1 Deceleration Control
6.3 Spindle Control Signal
6.3.1 Spindle Control Input (NC to Spindle)
6.3.2 Spindle Control Output (Spindle to NC)

7 Troubleshooting

7.1 Points of Caution and Confirmation
7.1.1 LED Display When Alarm or Warning Occurs
7.2 Protective Functions List of Units
7.2.1 List of Alarms
7.2.2 List of Warnings
7.3 Troubleshooting
7.3.1 Troubleshooting at Power ON
7.3.2 Troubleshooting for Each Alarm No.
7.3.3 Troubleshooting for Each Warning No.
7.3.4 Parameter Numbers during Initial Parameter Error
7.3.5 Troubleshooting the Spindle System When There Is No Alarm or Warning

8 Maintenance

8.1 Periodic Inspections
8.1.1 Inspections
8.1.2 Cleaning of Spindle Motor
8.2 Service Parts
8.3 Adding and Replacing Units and Parts
8.3.1 Replacing the Drive Unit
8.3.2 Replacing the Unit Fan
8.3.3 Replacing the Battery

9 Power Backup System

9.1 Deceleration and Stop Function at Power Failure
9.1.1 Specifications of Stop Method for Deceleration and Stop Function at Power Failure System
9.1.2 Wiring of Deceleration and Stop Function at Power Failure
9.1.3 Setup of Deceleration and Stop Function at Power Failure
9.2 Retraction function at power failure
9.2.1 Wiring of Retraction Function at Power Failure
9.2.2 Setup of Retraction Function at Power Failure System
9.3 Explanation of Each Part of Power Backup System
9.3.1 How to Set Rotary Switch and Dip Switches
9.3.2 Transition of LED Display After Power Is Turned ON
9.4 Troubleshooting for Power Backup System
9.4.1 LED Display When Alarm or Warning Occurs
9.4.2 List of Power Backup Function Alarms
9.4.3 List of Power Backup Function Warnings
9.4.4 Troubleshooting for Each Alarm No.
9.4.5 Troubleshooting for Each Warning No.
9.4.6 Trouble Shooting at Power ON

Appendix 1 Cable and Connector Assembly

Appendix 1.1 CMV1-xPxxS-xx Plug Connector
Appendix 1.2 1747464-1 Plug Connector
Appendix 1.2.1 Applicable Products
Appendix 1.2.2 Applicable Cable
Appendix 1.2.3 Related Documents
Appendix 1.2.4 Assembly Procedure

Appendix 2 D/A Output Specifications for Drive Unit

Appendix 2.1 D/A Output Specifications
Appendix 2.2 Output Data Settings
Appendix 2.2.1 Servo Drive Unit Settings
Appendix 2.2.2 Spindle Drive Unit Settings
Appendix 2.3 Setting the Output Magnification
Appendix 2.3.1 Servo Drive Unit Settings
Appendix 2.3.2 Spindle Drive Unit Settings

Appendix 3 Protection Function

Appendix 3.1 Protection Function
Appendix 3.1.1 Outline of Protection Function
Appendix 3.2 Emergency Stop Observation
Appendix 3.3 SLS (Safely Limited Speed) function

Appendix 4 Compliance to EC Directives
Appendix 4.1 Compliance to EC Directives
Appendix 4.1.1 European EC Directives
Appendix 4.1.2 Cautions for EC Directive Compliance

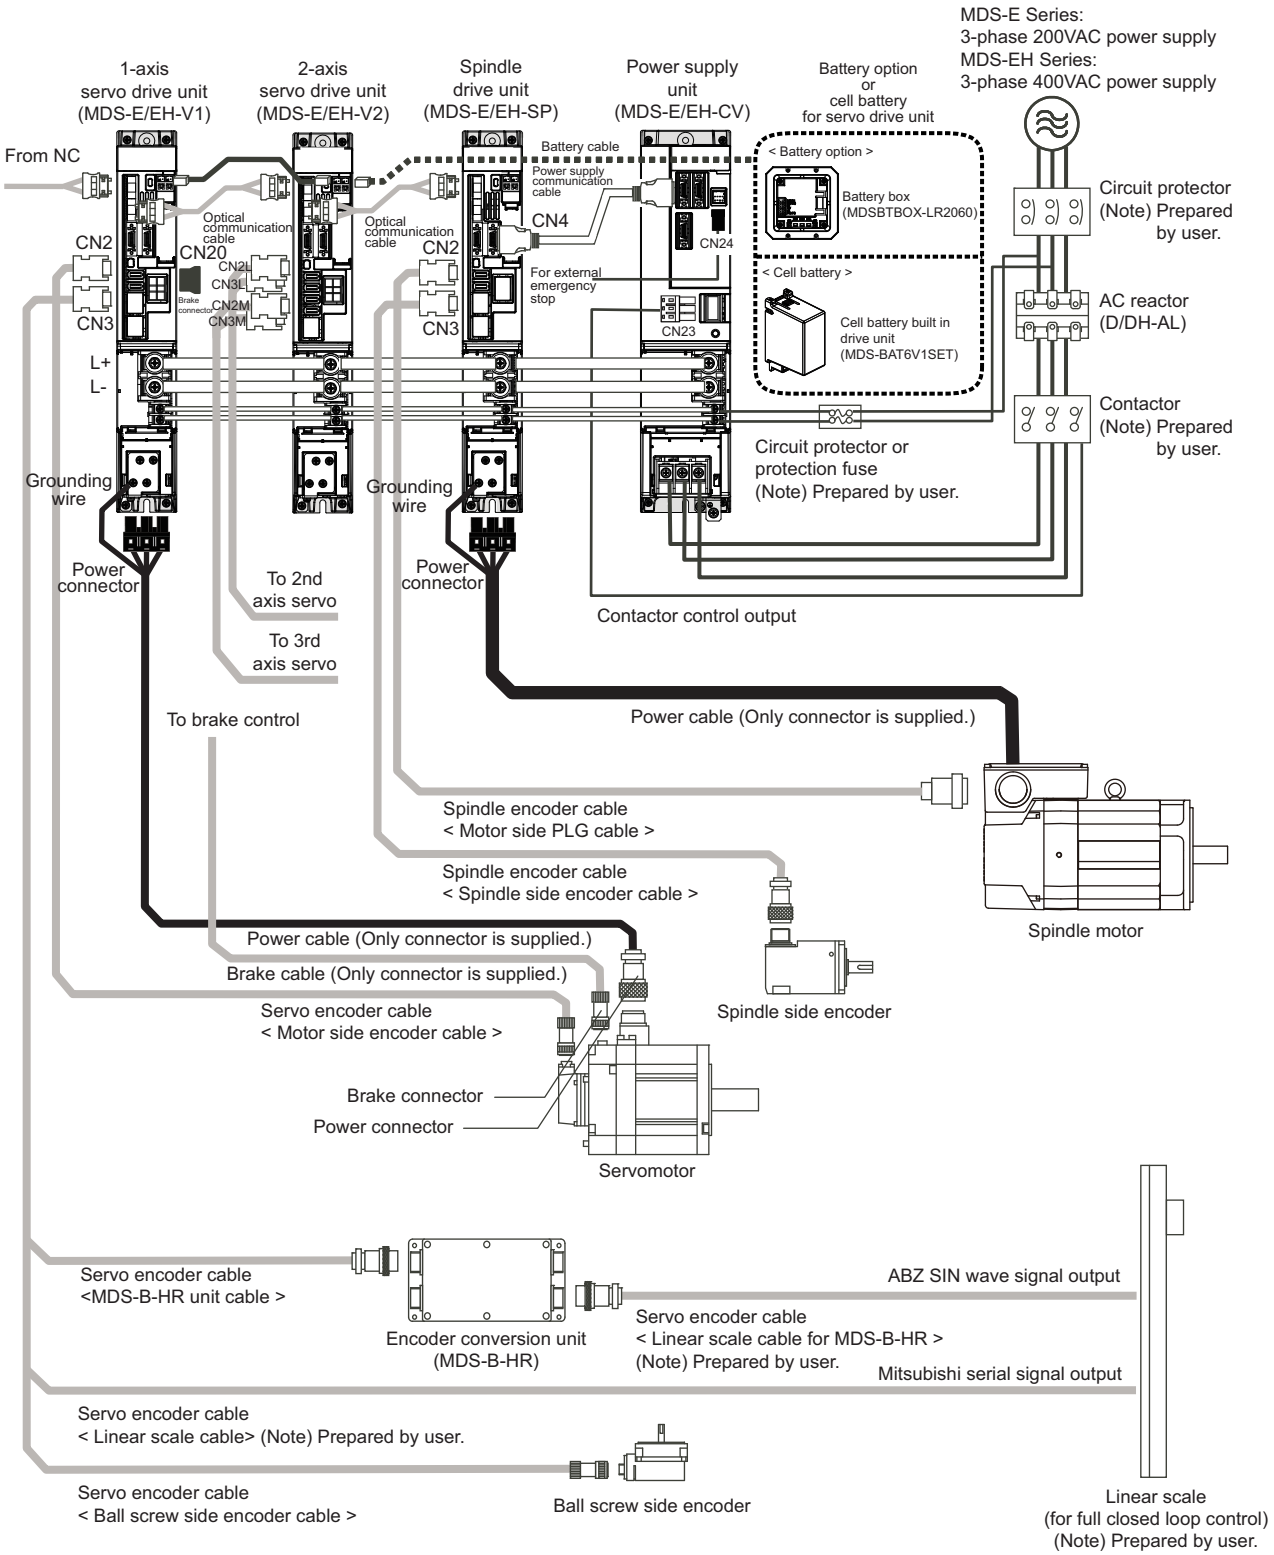
Introduction

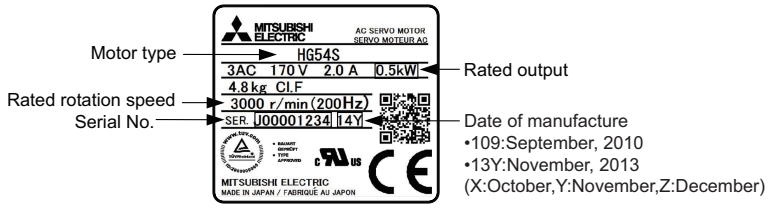
1.1 Servo/Spindle Drive System Configuration

1.1.1 System Configuration



1.2 Explanation of Type

1.2.1 Servo Motor Type



Motor rating nameplate

(1) 200V series

< HG Series >

HG (1) (2) (3) - (4)

(1) Rated output · Maximum rotation speed

Symbol	Rated output	Maximum rotation speed	Flange size (mm)
75	0.75 kW	5000 r/min	90 SQ.
105	1.0 kW	5000 r/min	90 SQ.
54	0.5 kW	4000 r/min	130 SQ.
104	1.0 kW	4000 r/min	130 SQ.
154	1.5 kW	4000 r/min	130 SQ.
224	2.2 kW	4000 r/min	130 SQ.
204	2.0 kW	4000 r/min	176 SQ.
354	3.5 kW	4000 r/min	176 SQ.
123	1.2 kW	3000 r/min	130 SQ.
223	2.2 kW	3000 r/min	130 SQ.
303	3.0 kW	3000 r/min	176 SQ.
453	4.5 kW	3500 r/min	176 SQ.
703	7.0 kW	3000 r/min	176 SQ.
903	9.0 kW	3000 r/min	204 SQ.
142	1.4 kW	2000 r/min	130 SQ.
302	3.0 kW	2000 r/min	176 SQ.
46	0.4 kW	6000 r/min	60 SQ.
56	0.5 kW	6000 r/min	60 SQ.
96	0.9 kW	6000 r/min	80 SQ.

(3) Shaft end structure

Symbol	Shaft end structure
S	Straight
T	Taper

(Note) "Taper" is available for the motor whose flange size is 90 SQ. mm or 130 SQ. mm.

(2) Magnetic brake

Symbol	Magnetic brake
None	None
B	With magnetic brakes

(4) Encoder

Symbol	Type	Detection method	Resolution
D47	OSA24RS	Absolute position	1,048,576 p/rev
D48	OSA24RS		1,048,576 p/rev
D51	OSA405S5AS		4,194,304 p/rev
D74	OSA676S5AS		67,108,864 p/rev

(Note) Encoder D47 can only be used with HG46/56/96.

(2) 400V series

< HG-H Series>

HG-H (1) (2) (3) – (4)

(1) Rated output · Maximum rotation speed

Symbol	Rated output	Maximum rotation speed	Flange size (mm)
75	0.75 kW	5000r/min	90 SQ.
105	1.0 kW	5000r/min	90 SQ.
54	0.5kW	4000r/min	130 SQ.
104	1.0kW	4000r/min	130 SQ.
154	1.5kW	4000r/min	130 SQ.

Environment	Ambient temperature	Operation: 0 to 40°C (with no freezing), Storage: -20°C to 65°C (with no freezing)	
	Ambient humidity	Operation: 90%RH or less (with no dew condensation), Storage: 90%RH or less (with no dew condensation)	
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist, or dust	
	Altitude	Operation: 1000 meters or less above sea level, Storage: 1000 meters or less above sea level, Transportation: 10000 meters or less above sea level	
Degree of protection		IP54 (The shaft-through portion is excluded.)	
Flange size [mm]		174 SQ.	
Total length (excluding shaft) [mm]		327	
Flange fitting diameter [mm]		Φ150	
Shaft diameter [mm]		Φ28	
Mass [kg]		24	
Heat-resistant class		155 (F)	

(Note 1) The tolerable radial load is the value calculated at the center of output shaft.

(Note 2) Only the combination designated in this manual can be used for the motor and drive unit. Always use the designated combination.

(Note 3) Actual acceleration/deceleration output is 1.2-fold of "Standard output during acceleration/deceleration" or 1.2-fold of "Short time rated output".

(Note 4) For SJ-D5.5/120-02T-S, output characteristics at acceleration/deceleration vary depending on the connected drive unit. Refer to "output characteristics" for details.

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

(Note) Actual acceleration/deceleration output is 1.2-fold of "Standard output during acceleration/deceleration" or 1.2-fold of "Short time rated output".

2.3 Tool Spindle Motor

2.3.1 Specifications

< HG Series >

Tool spindle motor type		HG Series		
		HG □ -D47		
		HG46	HG56	HG96
Compatible spindle drive unit type	MDS-E-SP-	20	20	20
	MDS-E-SP2-	20	20	20 40
Continuous characteristics	Rated output [kW]	0.4	0.5	0.9
	Rated current [A]	1.4	1.8	3.3
	Rated torque [N•m]	0.64	0.80	1.43
Power facility capacity [kVA]		0.9	1.1	1.8
Rated rotation speed [r/min]		6000		
Maximum rotation speed [r/min]		6000		
Maximum current [A]		5.3	11.2	15.0
Maximum torque [N•m]		2.5	5.0	7.2
Motor inertia [kg•cm^2]		0.23	0.376	1.26
Motor side encoder		Resolution per motor revolution D47:1,048,576 pulse/rev		
Degree of protection		IP67 (The shaft-through portion, power connector portion and brake connector portion are excluded.)		
Environment	Ambient temperature	Operation: 0 to 40°C (with no freezing), Storage: -15°C to 70°C (with no freezing)		
	Ambient humidity	Operation: 80%RH or less (with no dew condensation), Storage: 90%RH or less (with no dew condensation)		
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist, or dust		
	Altitude	Operation: 1000 meters or less above sea level, Storage: 10000 meters or less above sea level		
	Vibration	X,Y: 49m/s^2 (5G)		
Flange size [mm]		60 SQ.	60 SQ.	80 SQ.
Total length (excluding shaft) [mm]		117.2	138.9	147.8
Flange fitting diameter [mm]		Φ50	Φ50	Φ70
Shaft diameter [mm]		Φ14	Φ14	Φ19
Mass [kg]		1.2	1.6	2.9
Heat-resistant class		130(B)		

(Note 1) The above characteristics values are representative values. The maximum current and maximum torque are the values when combined with the drive unit.

(Note 2) Only the combination designated in this manual can be used for the motor and drive unit. Always use the designated combination.

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

(Note) The above graphs show the data when applied the input voltage of 200VAC. When the input voltage is 200VAC or less, the short time operation range is limited.

2.4 Drive Unit

2.4.1 Installation Environment Conditions

Common installation environment conditions for servo, spindle and power supply unit are shown below.

Environment	**Ambient temperature**	Operation: 0 to 55°C (with no freezing), Storage / Transportation: -15°C to 70°C (with no freezing)
	Ambient humidity	Operation: 90%RH or less (with no dew condensation) Storage / Transportation: 90%RH or less (with no dew condensation)
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 13000 meters or less above sea level
	Vibration/impact	4.9m/s2 (0.5G) / 49m/s2 (5G)

2.4.2 Servo Drive Unit

(1) 200V series

< MDS-E Series >

		1-axis servo drive unit MDS-E-V1 Series						
Servo drive unit type MDS-E-V1-		**20**	**40**	**80**	**160**	**160W**	**320**	**320W**
Nominal maximum current (peak) [A]		20	40	80	160	160	320	320
Output	**Rated voltage [V]**	170AC						
	Rated current [A]	6.4	10.9	16	33	42	65.8	97
Input	**Rated voltage [V]**	270 to 324DC						
	Rated current [A]	7	7	14	30	35	45	55
Control power	**Voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%						
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%						
	Maximum current [A]	0.2						
	Maximum rush current [A]	30						
	Maximum rush conductivity time [ms]	6						
Earth leakage current [mA]		1 (Max. 2)						
Control method		Sine wave PWM control method						
Braking		Regenerative braking and dynamic brakes						
	Dynamic brakes	Built-in						External (MDS-D-DBU)
External analog output		0 to +5V, 2ch (data for various adjustments)						
Degree of protection		IP20 (excluding terminal block)						
Cooling method		Forced air cooling						
Mass [kg]		3.8				4.5	5.8	7.5
Heat radiated at rated output [W]		40	58	96	184	245	366	471
Noise		Less than 55dB						
Unit outline dimension drawing		A1	A1	A1	A1	B1	C1	D1

		2-axis servo drive unit MDS-E-V2 Series				
Servo drive unit type MDS-E-V2-		**20**	**40**	**80**	**160**	**160W**
Nominal maximum current (peak) [A]		20/20	40/40	80/80	160/160	160/160
Output	**Rated voltage [V]**	170AC				
	Rated current [A]	6.4 / 6.4	10.9 / 10.9	16 / 16	33 / 33	42 / 42
Input	**Rated voltage [V]**	270 to 324DC				
	Rated current [A]	14(7 / 7)	14(7 / 7)	28(14 / 14)	60(30 / 30)	70(35 / 35)
Control power	**Voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%				
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%				
	Maximum current [A]	0.2				
	Maximum rush current [A]	30				
	Maximum rush conductivity time [ms]	6				
Earth leakage current [mA]		1 (Max. 4 For two axes)				
Control method		Sine wave PWM control method Current control method				
Braking		Regenerative braking and dynamic brakes				
	Dynamic brakes	Built-in				
External analog output		0 to +5V, 2ch (data for various adjustments)				
Degree of protection		IP20 (excluding terminal block)				
Cooling method		Forced air cooling				
Mass [kg]		3.8			5.2	6.3
Heat radiated at rated output [W]		70	106	182	358	480
Noise		Less than 55dB				
Unit outline dimension drawing		A1	A1	A1	B1	C1

(Note) The brake control connector (CN20) is controlled by the L-axis command. To control M-axis separately, use an external relay circuit through the CN9 connector output.

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

		3-axis servo drive unit MDS-E-V3 Series	
Servo drive unit type MDS-E-V3-		20	40
Nominal maximum current (peak) [A]		20/20/20	40/40/40
Output	Rated voltage [V]	AC170	
	Rated current [A]	6.4/6.4/6.4	10.9/10.9/10.9
Input	Rated voltage [V]	270 to 324DC	
	Rated current [A]	21(7/7/7)	21(7/7/7)
Control power	Voltage [V]	200 to 240AC Tolerable fluctuation : between +10% and -15%	
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%	
	Maximum current [A]	0.2	
	Maximum rush current [A]	30	
	Maximum rush conductivity time [ms]	6	
Earth leakage current [mA]		1 (Max. 2)	
Control method		Sine wave PWM control method	
Braking		Regenerative braking and dynamic brakes	
	Dynamic brakes	Built-in	
External analog output		0 to +5V, 2ch (data for various adjustments)	
Degree of protection		IP20 [over all]	
Cooling method		Forced air cooling	
Mass [kg]		3.8	
Heat radiated at rated output [W]		131	225
Noise		Less than 55dB	
Unit outline dimension drawing		A1	

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

(2) 400V series
< MDS-EH Series >

		1-axis servo drive unit MDS-EH-V1 Series							
Servo drive unit type MDS-EH-V1-		10	20	40	80	80W	160	160W	200
Nominal maximum current (peak) [A]		10	20	40	80	80	160	160	200
Output	Rated voltage [V]	323AC							
	Rated current [A]	2.3	4.9	7.7	17.0	21.0	32.0	46.0	76.8
Input	Rated voltage [V]	513 to 648DC							
	Rated current [A]	0.9	1.6	2.9	6.0	8.0	11.9	16.7	39.0
Control power	Voltage [V]	380 to 480AC Tolerable fluctuation : between +10% and -15%							
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%							
	Maximum current [A]	0.1							
	Maximum rush current [A]	18							
	Maximum rush conductivity time [ms]	12							18
Earth leakage current [mA]		1 (Max. 2)							
Control method		Sine wave PWM control method							
Braking		Regenerative braking and dynamic brakes							
	Dynamic brakes	Built-in						External (MDS-D-DBU)	
External analog output		0 to +5V, 2ch (data for various adjustments)							
Degree of protection		IP20 (excluding terminal block)							
Cooling method		Natural-cooling	Forced air cooling						
Mass [kg]		3.8				4.5	5.8	7.5	16.5
Heat radiated at rated output [W]		46	68	114	215	269	390	542	735
Noise		Less than 55dB							
Unit outline dimension drawing		A1	A1	A1	A1	B1	C1	D1	E1

		2-axis servo drive unit MDS-EH-V2 Series				
Servo drive unit type MDS-EH-V2-		10	20	40	80	80W
Nominal maximum current (peak) [A]		10/10	20/20	40/40	80/80	80/80
Output	Rated voltage [V]	323AC				
	Rated current [A]	2.3 / 2.3	4.9 / 4.9	7.7 / 7.7	17.0 / 17.0	21.0 / 21.0
Input	Rated voltage [V]	513 to 648DC				
	Rated current [A]	1.8(0.9 / 0.9)	3.2(1.6 / 1.6)	5.8(2.9 / 2.9)	12(6.0 / 6.0)	16(8.0 / 8.0)
Control power	Voltage [V]	380 to 480AC Tolerable fluctuation : between +10% and -15%				
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%				
	Maximum current [A]	0.1				
	Maximum rush current [A]	18				
	Maximum rush conductivity time [ms]	12				
Earth leakage current [mA]		1 (Max. 4 For two axes)				
Control method		Sine wave PWM control method Current control method				
Braking		Regenerative braking and dynamic brakes				
	Dynamic brakes	Built-in				
External analog output		0 to +5V, 2ch (data for various adjustments)				
Degree of protection		IP20 (excluding terminal block)				
Cooling method		Natural-cooling	Forced air cooling			
Mass [kg]		3.8			5.2	6.3
Heat radiated at rated output [W]		82	126	218	420	528
Noise		Less than 55dB				
Unit outline dimension drawing		A1	A1	A1	B1	C1

(Note) The brake control connector (CN20) is controlled by the L-axis command. To control M-axis separately, use an external relay circuit through the CN9 connector output.

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

2.4.3 Spindle Drive Unit

(1) 200V series

< MDS-E Series >

		1-axis spindle drive unit MDS-E-SP Series								
Spindle drive unit type MDS-E-SP-		**20**	**40**	**80**	**160**	**200**	**240**	**320**	**400**	**640**
Nominal maximum current (peak) [A]		20	40	80	160	200	240	320	400	640
Output	**Rated voltage [V]**	170AC								
	Rated current [A]	9	15	27	54	85	94	150	180	225
Input	**Rated voltage [V]**	270 to 324DC								
	Rated current [A]	7	13	20	41	76	95	140	150	210
Control power	**Voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%								
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%								
	Maximum current [A]	0.2								
	Maximum rush current [A]	30								
	Maximum rush conductivity time [ms]	6							9	
Earth leakage current [mA]		6 (Max. 15)								
Control method		Sine wave PWM control method								
Braking		Regenerative braking								
External analog output		0 to +5V, 2ch (data for various adjustments)								
Degree of protection		IP20 (excluding terminal block)								
Cooling method		Forced air cooling								
Mass [kg]		3.8			4.5	5.8	6.5	7.5	16.5	
Heat radiated at continuous rated output [W]		55	94	158	290	481	620	806	1045	1427
Noise		Less than 55dB								
Unit outline dimension drawing		A1	A1	A1	B1	C1	D1	D2	E1	F1

		2-axis spindle drive unit MDS-E-SP2 Series			
Spindle drive unit type MDS-E-SP-		**20**	**40**	**80**	**16080**
Nominal maximum current (peak) [A]		20/20	40/40	80/80	160/80
Output	**Rated voltage [V]**	170AC			
	Rated current [A]	9 / 9	15 / 15	27 / 27	54 / 27
Input	**Rated voltage [V]**	270 to 324DC			
	Rated current [A]	14(7 / 7)	26(13 / 13)	40(20 / 20)	61(41 / 20)
Control power	**Voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%			
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%			
	Maximum current [A]	0.2			
	Maximum rush current [A]	30			
	Maximum rush conductivity time [ms]	6			
Earth leakage current [mA]		6 (Max. 15)			
Control method		Sine wave PWM control method			
Braking		Regenerative braking			
External analog output		0 to +5V, 2ch (data for various adjustments)			
Degree of protection		IP20 (excluding terminal block)			
Cooling method		Forced air cooling			
Mass [kg]		4.5	4.5	6.5	5.2
Heat radiated at continuous rated output [W]		90	168	298	428
Noise		Less than 55dB			
Unit outline dimension drawing		A1	A1	B1	B1

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

(2) 400V series

< MDS-EH Series >

		1-axis spindle drive unit MDS-EH-SP Series								
Spindle drive unit type MDS-EH-SP-		20	40	80	100	160	200	320	480	600
Nominal maximum current (peak) [A]		20	40	80	100	160	200	320	480	600
Output	Rated voltage [V]	323AC								
	Rated current [A]	11	18	27	43	75	90	125	180	200
Input	Rated voltage [V]	513 to 648DC								
	Rated current [A]	10	15	21	38	72	82	119	150	210
Control power	Voltage [V]	380 to 480AC Tolerable fluctuation : between +10% and -15%								
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%								
	Maximum current [A]	0.1								
	Maximum rush current [A]	18								
	Maximum rush conductivity time [ms]	12					18			
Earth leakage current [mA]		6 (Max. 15)								
Control method		Sine wave PWM control method								
Braking		Regenerative braking								
External analog output		0 to +5V, 2ch (data for various adjustments)								
Degree of protection		IP20 (excluding terminal block)								
Cooling method		Forced air cooling								
Mass [kg]		3.8	4.5		5.8	7.5	16.5		22.5	23.0
Heat radiated at continuous rated output [W]		120	200	291	442	749	872	1202	1720	2349
Noise		Less than 55dB								
Unit outline dimension drawing		A1	A1	B1	C1	D1	E1	E1	F1	F1

(Note) Rated output capacity and rated speed of the motor used in combination with the drive unit are as indicated when using the power supply voltage and frequency listed. The torque drops when the voltage is less than specified.

For outline dimension drawings, refer to "DRIVE SYSTEM DATA BOOK" (IB-1501252(ENG)).

2.4.4 Power Supply Unit

(1) 200V series

< MDS-E Series >

		Power supply unit MDS-E-CV Series							
Power supply unit type MDS-E-CV-		**37**	**75**	**110**	**185**	**300**	**370**	**450**	**550**
30-minute rated output [kW]		3.7	7.5	11.0	18.5	30.0	37.0	45.0	55.0
Continuous rated output [kW]		2.2	5.5	7.5	15.0	26.0	30.0	37.0	45.0
Power facility capacity [kVA]		5.3	11	16.0	27.0	43.0	53.0	64.0	78.0
Input	**Rated voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%							
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%							
	Rated current [A]	15	26	35	65	107	121	148	200
Output	**Rated voltage [V]**	270 to 324DC							
	Rated current [A]	17	30	41	76	144	164	198	238
Control power	**Voltage [V]**	200 to 240AC Tolerable fluctuation : between +10% and -15%							
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%							
	Maximum current [A]	0.2							
	Maximum rush current [A]	38							
	Maximum rush conductivity time [ms]	3							
Main circuit method		Converter with power regeneration circuit							
Degree of protection		IP20 (excluding terminal block)							
Cooling method		Natural-cooling		Forced air cooling					
Mass [kg]		4.0		6.0		10.0			25.5
Heat radiated at rated output [W]		54	79	124	193	317	396	496	595
Noise		Less than 55dB							
Unit outline dimension drawing		A2	A2	B1	B1	D1	D1	D2	F1

(2) 400V series

< MDS-EH Series >

		Power supply unit MDS-EH-CV Series								
Power supply unit type MDS-EH-CV-		**37**	**75**	**110**	**185**	**300**	**370**	**450**	**550**	**750**
30-minute rated output [kW]		3.7	7.5	11.0	18.5	30.0	37.0	45.0	55.0	75.0
Continuous rated output [kW]		2.2	5.5	7.5	15.0	26.0	30.0	37.0	45.0	55.0
Power facility capacity [kVA]		5.3	11.0	16.0	27.0	43.0	53.0	64.0	78.0	107.0
Input	**Rated voltage [V]**	380 to 480AC Tolerable fluctuation : between +10% and -15%								
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%								
	Rated current [A]	5.2	13	18	35	61	70	85	106	130
Output	**Rated voltage [V]**	513 to 648DC								
	Rated current [A]	7.1	15	21	38	72	82	99	119	150
Control power	**Voltage [V]**	380 to 480AC Tolerable fluctuation : between +10% and -15%								
	Frequency [Hz]	50/60 Tolerable fluctuation : between +5% and -5%								
	Maximum current [A]	0.1								
	Maximum rush current [A]	18								
	Maximum rush conductivity time [ms]	12								
Main circuit method		Converter with power regeneration circuit								
Degree of protection		IP20 (excluding terminal block)								
Cooling method		Forced air cooling								
Mass [kg]		6.0				10.0			25.5	
Heat radiated at rated output [W]		54	79	124	193	317	402	496	595	842
Noise		Less than 55dB

2.4.6 AC Reactor

An AC reactor must be installed for each power supply unit.

(1) 200V series

< MDS-E Series >

		AC reactor						
AC reactor model D-AL-		**7.5K**	**11K**	**18.5K**	**30K**	**37K**	**45K**	**55K**
Compatible power supply unit type MDS-E-CV-		37,75	110	185	300	370	450	550
Rated capacity [kW]		7.5	11	18.5	30	37	45	55
Rated voltage [V]		200 to 240AC Tolerable fluctuation : between +10% and -15%						
Rated current [A]		27	40	66	110	133	162	200
Frequency [Hz]		50/60 Tolerable fluctuation : between +5% and -5%						
Environment	**Ambient temperature**	Operation: -10°C to 60°C (with no freezing), Storage/Transportation: -10°C to 60°C (with no freezing)						
	Ambient humidity	Operation: 80%RH or less (with no dew condensation), Storage/Transportation: 80%RH or less (with no dew condensation)						
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist or dust						
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 10000 meters or less above sea level						
	Vibration / impact	9.8m/s^2 (1G) / 98m/s^2 (10G)						
Mass [kg]		4.2	3.7	5.3	6.1	8.6	9.7	11.5

(2) 400V series

< MDS-EH Series >

		AC reactor							
AC reactor model DH-AL-		**7.5K**	**11K**	**18.5K**	**30K**	**37K**	**45K**	**55K**	**75K**
Compatible power supply unit type MDS-EH-CV-		37, 75	110	185	300	370	450	550	750
Rated capacity [kW]		7.5	11	18.5	30	37	45	55	75
Rated voltage [V]		380 to 480AC Tolerable fluctuation : between +10% and -15%							
Rated current [A]		14	21	37	65	75	85	106	142
Frequency [Hz]		50/60 Tolerable fluctuation : between +5% and -5%							
Environment	**Ambient temperature**	Operation: -10°C to 60°C (with no freezing), Storage/Transportation: -10°C to 60°C (with no freezing)							
	Ambient humidity	Operation: 80%RH or less (with no dew condensation), Storage/Transportation: 80%RH or less (with no dew condensation)							
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist or dust							
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 10000 meters or less above sea level							
	Vibration / impact	9.8m/s^2 (1G) / 98m/s^2 (10G)							
Mass [kg]		4.0	3.7	5.3	6.0	8.5	9.8	10.5	13.0

⚠ CAUTION

D-AL/DH-AL is used for MDS-E/EH-CV.

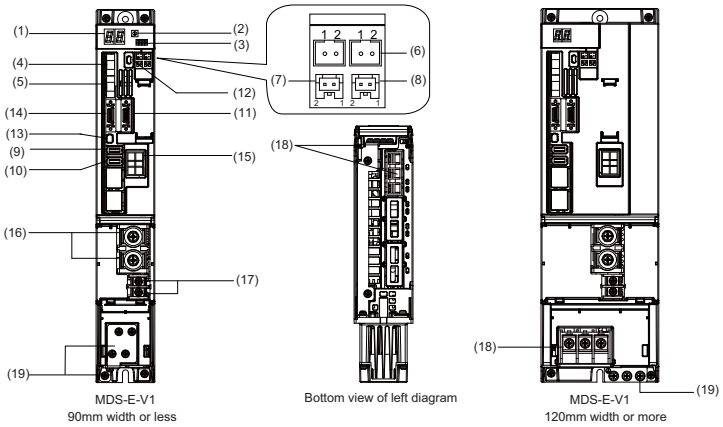
2.4.7 Explanation of Each Part

(1) 200V series

< MDS-E Series >

(a) Explanation of each 1-axis servo drive unit part



The connector and terminal block layout may differ according to the unit being used. Refer to each unit outline drawing for details.

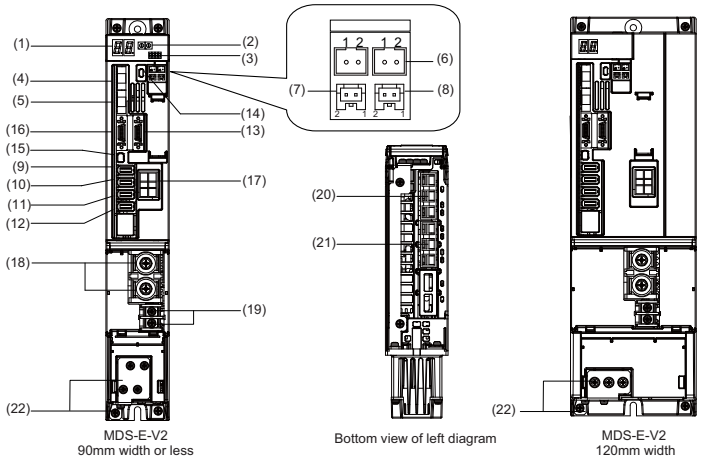
< Each part name >

		Name		Description
(1)	Control circuit	LED	---	Unit status indication LED
(2)		SWL	---	Axis No. setting switch
(3)		SW1	---	Unused axis setting switch
(4)		CN1A	---	NC or master axis optical communication connector
(5)		CN1B	---	Slave axis optical communication connector
(6)		BTA,BTB	---	(Unused)
(7)		BTI	---	Battery input side
(8)		BTO	---	Battery output side
(9)		CN2L	---	Motor side encoder connection connector 5V power supply capacity:0.35A
(10)		CN3L	---	Machine side encoder connection connector 5V power supply capacity:0.35A
(11)		CN4	---	Power supply communication connector
(12)		CN5	---	USB maintenance connector (usually not used)
(13)		CN8	---	External STO input connector (Insert the provided STO short-circuit connector when not using external STO input.)
(14)		CN9	---	DIO/analog output connector
(15)		CN20	---	Motor brake/dynamic brake control connector (Key way: X type)
(16)	Main circuit	TE2	L+ L-	Converter voltage input terminal (DC input)
(17)		TE3	L11 L21	Control power input terminal (single-phase AC input)
(18)		TE1	LU, LV, LW	Motor power supply output connector (3-phase AC output), Motor grounding terminal (for 90mm width or less) Motor power supply output terminal (for 120mm width or more) (3-phase AC output)
(19)		PE	⏚	Grounding terminal, Motor grounding terminal

< Screw size >

	1-axis servo drive unit MDS-E-V1-			
Type	**20 to 160**	**160W**	**320**	**320W**
Unit width (mm)	60	90	120	150
(16) TE2	M6 × 16			
(17) TE3	M4 × 12			
(18) TE1	-	-	M5 × 12	M8 × 12
(19) ⏚	M4 × 12	M5 × 12		M8 × 12

(b) Explanation of each 2-axis servo drive unit part



The connector and terminal block layout may differ according to the unit being used. Refer to each unit outline drawing for details.

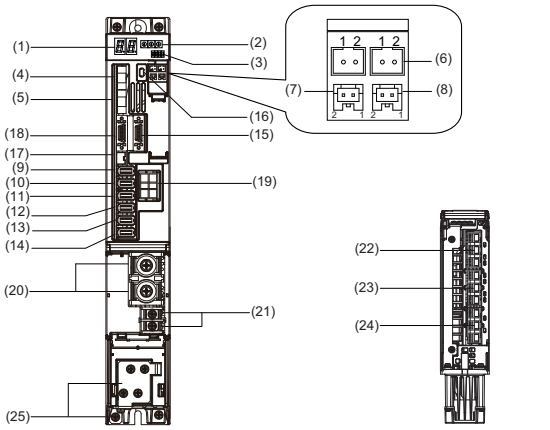
< Each part name >

		Name		Description
(1)	Control circuit	LED	---	Unit status indication LED
(2)		SWL,SWM	---	Axis No. setting switch (L,M axis)
(3)		SW1	---	Unused axis setting switch (L, M axis)
(4)		CN1A	---	NC or master axis optical communication connector
(5)		CN1B	---	Slave axis optical communication connector
(6)		BTA,BTB	---	(Unused)
(7)		BTI	---	Battery input side
(8)		BTO	---	Battery output side
(9)		CN2L	---	Motor side encoder connection connector (L axis) 5V power supply capacity:0.35A
(10)		CN3L	---	Machine side encoder connection connector (L axis) 5V power supply capacity:0.35A
(11)		CN2M	---	Motor side encoder connection connector (M axis) 5V power supply capacity:0.35A
(12)		CN3M	---	Machine side encoder connection connector (M axis) 5V power supply capacity:0.35A
(13)		CN4	---	Power supply communication connector
(14)		CN5	---	USB maintenance connector (usually not used)
(15)		CN8	---	External STO input connector (Insert the provided STO short-circuit connector when not using external STO input.)
(16)		CN9	---	DIO/analog output connector
(17)		CN20	---	Motor brake/dynamic brake control connector (Key way: X type)
(18)	Main circuit	TE2	L+ L-	Converter voltage input terminal (DC input)
(19)		TE3	L11 L21	Control power input terminal (single-phase AC input)
(20)		TE1	LU, LV, LW	Motor power supply output connector (3-phase AC output)
(21)			MU, MV, MW	
(22)		PE	⏚	Grounding terminal, Motor grounding terminal

< Screw size >

	2-axis servo drive unit MDS-E-V2-		
Type	**20 to 80**	**160**	**160W**
Unit width (mm)	60	90	120
(18) TE2	M6×16		
(19) TE3	M4×12		
(22) ⏚	M4×12		M5×12

(c) Explanation of each 3-axis servo drive unit part



The connector and terminal block layout may differ according to the unit being used. Refer to each unit outline drawing for details.

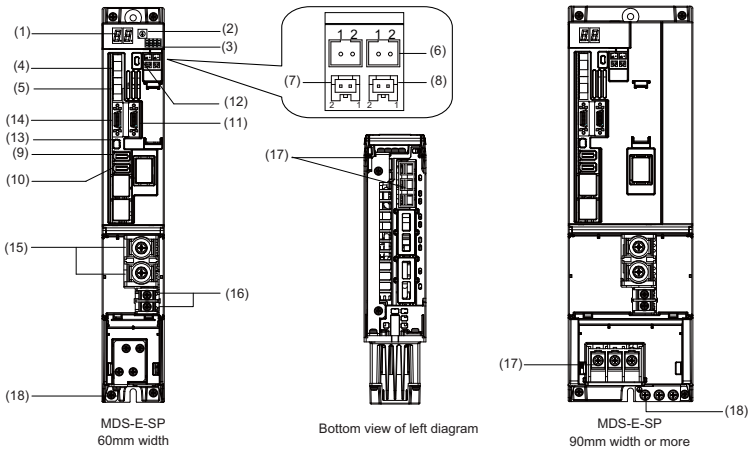
< Each part name >

		Name		Description
(1)	**Control circuit**	LED	---	Unit status indication LED
(2)		SWL,SWM,SWS	---	Axis No. setting switch (L,M,S-axis)
(3)		SW1	---	Unused axis setting switch (L,M,S-axis)
(4)		CN1A	---	NC or master axis optical communication connector
(5)		CN1B	---	Slave axis optical communication connector
(6)		BTA,BTB	---	(Unused)
(7)		BTI	---	Battery input side
(8)		BTO	---	Battery output side
(9)		CN2L	---	Motor side encoder connection connector (L-axis) 5V power supply capacity:0.35A
(10)		CN3L		Machine side encoder connection connector (L axis) 5V power supply capacity:0.35A
(11)		CN2M	---	Motor side encoder connection connector (M axis) 5V power supply capacity:0.35A
(12)		CN3M		Machine side encoder connection connector (M axis) 5V power supply capacity:0.35A
(13)		CN2S	---	Motor side encoder connection connector (S-axis) 5V power supply capacity:0.35A
(14)		CN3S		Machine side encoder connection connector (S axis) 5V power supply capacity:0.35A
(15)		CN4	---	Power supply communication connector
(16)		CN5	---	USB maintenance connector (usually not used)
(17)		CN8	---	External STO input connector (Insert the provided STO short-circuit connector when not using external STO input.)
(18)		CN9	---	DIO/analog output connector
(19)		CN20	---	Motor brake/dynamic brake control connector (Key way: X type)
(20)	**Main circuit**	TE2	L+ L-	Converter voltage input terminal (DC input)
(21)		TE3	L11 L21	Control power input terminal (single-phase AC input)
(22)		TE1	LU, LV, LW	Motor power supply output connector (3-phase AC output)
(23)			MU, MV, MW	
(24)			SU, SV, SW	
(25)		PE	⏚	Grounding terminal, Motor grounding terminal

< Screw size >

	3-axis servo drive unit MDS-E-V3-	
Type	**20**	**40**
Unit width (mm)	60	
(20) TE2	M6x 16	
(21) TE3	M4x 12	
(25) ⏚	M4x 12	

(d) Explanation of each 1-axis spindle drive unit part



The connector and terminal block layout may differ according to the unit being used. Refer to each unit outline drawing for details.

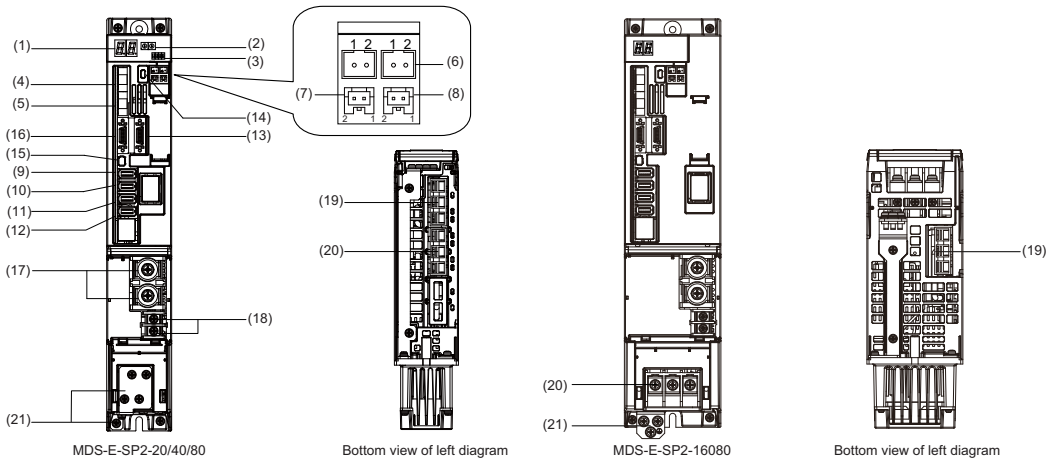
< Each part name >

		Name		Description
(1)	Control circuit	LED	---	Unit status indication LED
(2)		SWL	---	Axis No. setting switch
(3)		SW1	---	Unused axis setting switch
(4)		CN1A	---	NC or master axis optical communication connector
(5)		CN1B	---	Slave axis optical communication connector
(6)		BTA,BTB	---	(Unused)
(7)		BTI	---	(Unused)
(8)		BTO	---	(Unused)
(9)		CN2L	---	Motor side encoder connection connector 5V power supply capacity:0.35A
(10)		CN3L	---	Spindle side encoder connection connector 5V power supply capacity:0.35A
(11)		CN4	---	Power supply communication connector
(12)		CN5	---	USB maintenance connector (usually not used)
(13)		CN8	---	External STO input connector (Insert the provided STO short-circuit connector when not using external STO input.)
(14)		CN9	---	DIO/analog output connector
(15)	Main circuit	TE2	L+ L-	Converter voltage input terminal (DC input)
(16)		TE3	L11 L21	Control power input terminal (single-phase AC input)
(17)		TE1	LU, LV, LW	Motor power supply output connector (3-phase AC output), Motor grounding terminal (for 60mm width) Motor power supply output terminal (3-phase AC output) (for 90mm width or more)
(18)		PE	⏚	Grounding terminal, Motor grounding terminal Note that TE1 connector (above "(17)") is used for the motor grounding of the 60mm width unit.

< Screw size >

	Spindle drive unit MDS-E-SP-					
Type	**20,40,80**	**160**	**200**	**240,320**	**400**	**640**
Unit width (mm)	60	90	120	150	240	300
(15) TE2	M6 x 16				M10 x 20	
(16) TE3	M4 x 12				M4 x 8	
(17) TE1	-	M5 x 12		M8 x 12	M10 x 20	
(18) ⏚	M4 x 12	M5 x 12		M8 x 12	M10 x 20	

(e) Explanation of each 2-axis spindle drive unit part



MDS-E-SP2-20/40/80 | Bottom view of left diagram | MDS-E-SP2-16080 | Bottom view of left diagram

The connector and terminal block layout may differ according to the unit being used. Refer to each unit outline drawing for details.

< Each part name >

		Name		Description
(1)	Control circuit	LED	---	Unit status indication LED
(2)		SWL,SWM	---	Axis No. setting switch (L,M axis)
(3)		SW1	---	Unused axis setting switch (L, M axis)
(4)		CN1A	---	NC or master axis optical communication connector
(5)		CN1B	---	Slave axis optical communication connector
(6)		BTA,BTB	---	(Unused)
(7)		BTI	---	(Unused)
(8)		BTO	---	(Unused)
(9)		CN2L	---	Motor side encoder connection connector (L axis) 5V power supply capacity:0.35A
(10)		CN3L	---	Spindle side encoder connection connector (L axis) 5V power supply capacity:0.35A
(11)		CN2M	---	Motor side encoder connection connector (M axis) 5V power supply capacity:0.35A
(12)		CN3M	---	Spindle side encoder connection connector (M axis) 5V power supply capacity:0.35A
(13)		CN4	---	Power supply communication connector
(14)		CN5	---	USB maintenance connector (usually not used)
(15)		CN8	---	External STO input connector (Insert the provided STO short-circuit connector when not using external STO input.)
(16)		CN9	---	DIO/analog output connector
(17)	Main circuit	TE2	L+ L-	Converter voltage input terminal (DC input)
(18)		TE3	L11 L21	Control power input terminal (single-phase AC input)
(19)		TE1	LU, LV, LW	Motor power supply output connector (3-phase AC output) Motor power supply output terminal (3-phase AC output) (For MDS-E-SP2-16080)
(20)			MU, MV, MW	Motor power supply output connector (3-phase AC output)

(Note 2) 4.5 SLS (Safely Limited Speed) function is set on NC side.

3.1 Base Control Functions

3.1.1 Full Closed Loop Control

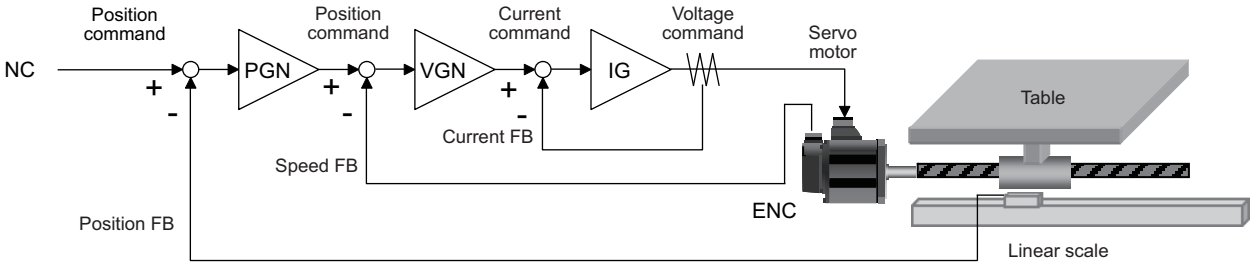
The servo control is all closed loop control using the encoder's feedback. "Full closed loop control" is the system that directly detects the machine position using a linear scale, whereas the general "semi-closed loop" is the one that detects the motor position.

In a machine that drives a table with a ball screw, the following factors exist between the motor and table end:

(1) Coupling or ball screw table bracket's backlash

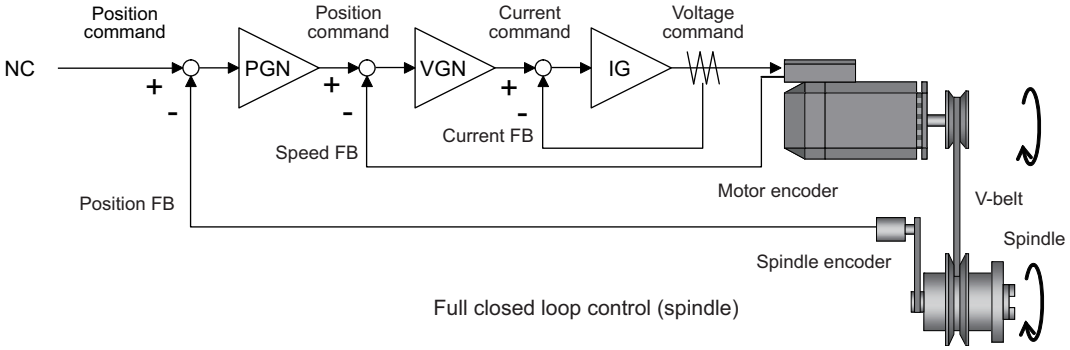
(2) Ball screw pitch error

These can adversely affect the accuracy. If the table position of the machine side is directly detected with a linear scale, high-accuracy position control which is not affected by backlash or pitch error is possible.



Full closed loop control (servo)

The ball screw side encoder is also applied.



Full closed loop control (spindle)

3.1.2 Position Command Synchronous Control

This is one of the controls which enable two servo motors to drive the same axis. This is also called "Position tandem control".

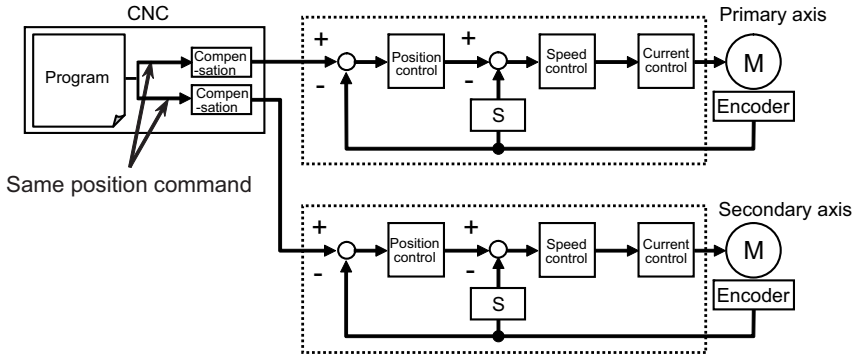
The same position command is issued to the 2-axis servo control, and the control is carried out according to each axis' position and speed feedbacks.

<Features>

(1) The position commands in which machine's mechanical errors (pitch error, backlash, etc.) have been compensated, can be output to each axis.

(2) Each axis conducts independent position control, therefore the machine posture can be kept constant.

(3) Deviation between the two axes is always monitored, and if excessive, the alarm is detected.



3.1.3 Speed Command Synchronous Control

This is one of the controls which enable two servo motors to drive the same axis. This is also called "Speed tandem control".

The same position command is issued to the 2-axis servo control, and the control is carried out according to each axis' position and speed feedbacks.

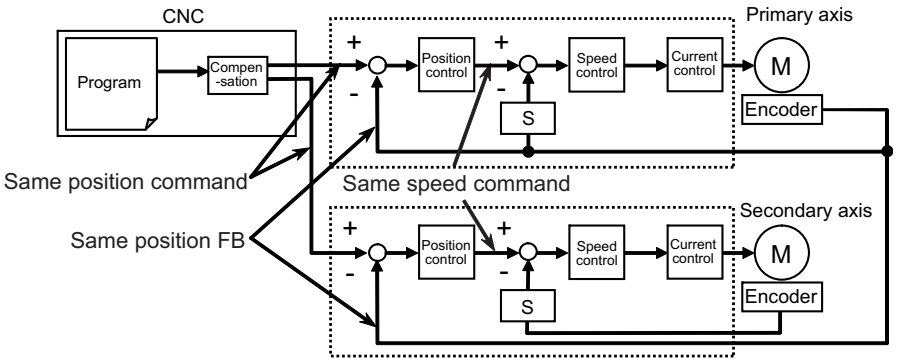
This function is usually used when the control is performed with one linear scale during the full closed loop control.

<Features>

(1) When a linear scale is used, two axes can share the position feedback signal from one linear scale.

(2) Feed rates of each axis are controlled with each axis' speed feedback signals, which allows stable control.

(3) Mechanical errors (pitch error, backlash, etc.) are compensated using the common values.



⚠ CAUTION

1. The speed command synchronous control cannot be used for a primary or secondary axis on which load unbalance is generated (Example: an axis carrying an operating axis).
2. Disturbance observer cannot be used during the speed command synchronous control.

POINT

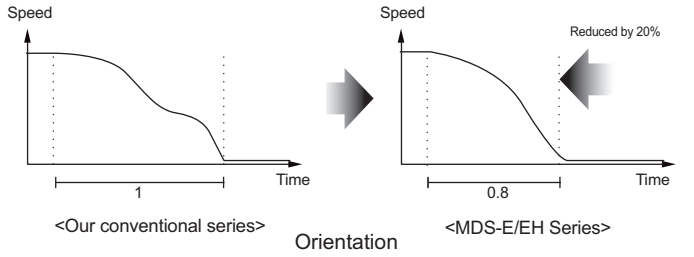
When using a motor with brake for rigid synchronization control axes, the brake circuits of the two motors can be connected to CN20 connector.

3.1.4 Distance-coded Reference Position Control

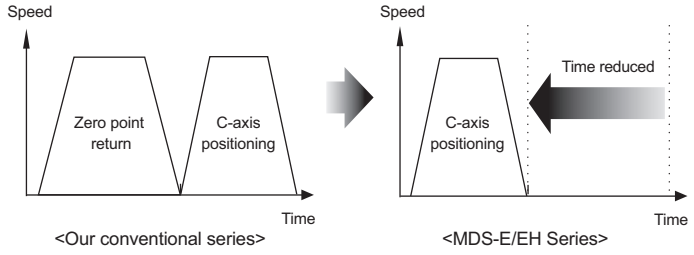
This is the function to establish the reference point from axis movements of the reference points using a scale with distance-coded reference mark.
Since it is not necessary to move the axis to the reference point, the axis movement amount to establish the reference point can be reduced.
No dog is used as the position is calculated using reference marks.
If the distance-coded reference check function is used to verify the motor end encoder data, select a battery option before setting the parameter.

3.1.5 Spindle's Continuous Position Loop Control

Under this control, position loop control is always applied to spindle, including when speed command is issued (in cutting). There is no need for control changeover nor zero point return during orientation and C axis control changeover. Therefore, the operation can be completed in a shorter time than the previous.
In acceleration/deceleration with S command, the acceleration/deceleration and orientation are always controlled with the spindle motor's maximum torque.



Orientation



C-axis changeover

3.1.6 Coil Changeover Control

A signal output from the spindle drive unit controls the changeover of the low-speed and high-speed specification coils in a spindle motor.
The drive unit automatically outputs the coil changeover sequence in accordance with the motor speed.

3.1.7 Gear Changeover Control

This function enables a spindle motor to perform both high-speed light cutting and low-speed heavy cutting by changing the gear ratio between the motor and spindle.
The gear change is carried out while the spindle is not running.

3.1.8 Orientation Control

This control enables a spindle motor to stop at a designated angle when the motor is rotating at a high-speed with a speed command. This control is used for exchanging the tools in machining centers and performing index positioning in lathes, etc.

3.1.9 Indexing Control

This control enables positioning of a spindle motor at an arbitrary angle (in increments of 0.01 degrees) from the orientation stop position. This control is used for positioning in lathes for hole drilling, etc.

3.1.10 Synchronous Tapping Control

Under synchronous tapping control, spindle control is completely synchronized with Z axis servo control, and Z axis is accurately fed by one screw pitch in accordance with one tap revolution. The tap is completely fixed to the spindle head. As a result, feed pitch error is less likely to occur, which allows high-speed, high-accuracy and high-durable tapping.

3.1.11 Spindle Synchronous Control

This control enables two spindles to run at the same speed. A spindle being driven with a speed command is synchronized with another spindle at a constant rate or acceleration/deceleration rate.
This control is applied such as when a workpiece is transferred between two rotating chucks in lathe or a workpiece is held with two chucks.

3.1.12 Spindle/C Axis Control

An axis rotating about Z axis is called C axis, whose rotation direction is normally the same as of spindle. This function enables high-accuracy spindle control including interpolation control, like servo axis, when a high-resolution position encoder is attached to the spindle motor.

3.1.13 Proximity Switch Orientation Control

Orientation control is carried out based on the leading edge position of the proximity switch output signal (ON/OFF) after the spindle is stopped.

3.1.14 Power Regeneration Control

This control enables the regeneration energy generated when the motor decelerates to return to the power supply. This is an energy saving method because regeneration energy is hardly converted to heat.

3.1.15 Resistor Regeneration Control

This control enables the regeneration energy generated when the motor decelerates to convert to heat with regenerative resistance.
The drive system can be downsized because the regeneration capacity is also small in the motor of relatively small capacity.
Select a suitable regenerative resistance according to the load inertia, motor operation speed, etc.

3.2 Servo/Spindle Control Functions

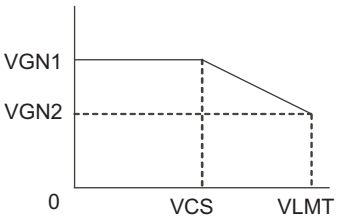
3.2.1 Torque Limit Function

This control suppresses the motor output torque with the parameter values (SV013, SV014).
This function is used for stopper positioning control and stopper reference position establishment, by switching the two setting values.

3.2.2 Variable Speed Loop Gain Control

< Servo >

If disturbing noise occurs when the motor is rotating at a high speed, such as during rapid traverse, the high speed loop gain during high-speed rotation can be lowered with this function.

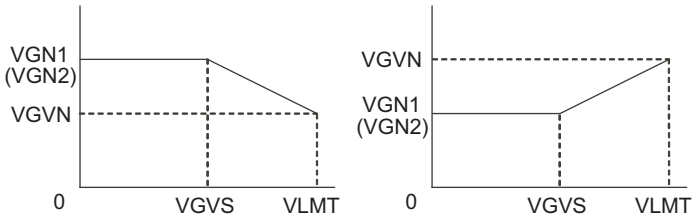


(VLMT=Max. speed x 1.15)

VGN1:SV005
VGN2:SV006
VCS :SV029
VLMT:Servo motor maximum speed×1.15

< Spindle >

For a high-speed spindle of machining center etc., adequate response can be ensured with this function by suppressing noise and vibration at low speeds and increasing the speed loop gain at high-speeds.

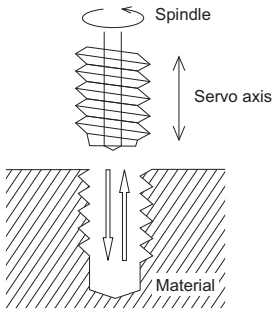


(VLMT=Max. speed x 1.15) (VLMT=Max. speed x 1.15)

VGN1:SP005
VGN2:SP008
VGVN:SP005×SP073/100
VGVS:SP074
VLMT:SP026×1.15

3.2.3 Gain Changeover for Synchronous Tapping Control

SV003, SV004 and SV057 are used as the position loop gain for normal control. Under synchronous tapping control, SV049, SV050 and SV058 are used instead to meet the spindle characteristics.



3.2.4 Speed Loop PID Changeover Control

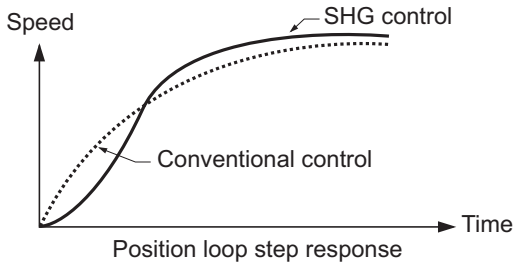
This function is used under full-closed loop control. Normally, machine-end position tracking delays compared with the motor-end position.
Under full-closed position loop control, machine-end position is used for position feedback. Therefore, the motor-end position tends to advance too much, which may cause overshooting of the machine-end position.
This function can suppress the generation of overshoot by adding the D (delay) control to the speed control, which is normally controlled with PI (proportional integral), in order to weaken the PI control after the position droop becomes 0.

3.2.5 Disturbance Torque Observer

The effect caused by disturbance, frictional resistance or torsion vibration during cutting can be reduced by estimating the disturbance torque and compensating it.

3.2.6 Smooth High Gain Control (SHG Control)

A high-response control and smooth control (reduced impact on machine) were conventionally conflicting elements; however, SHG control enables the two elements to function simultaneously by controlling the motor torque (current FB) with an ideal waveform during acceleration/deceleration.

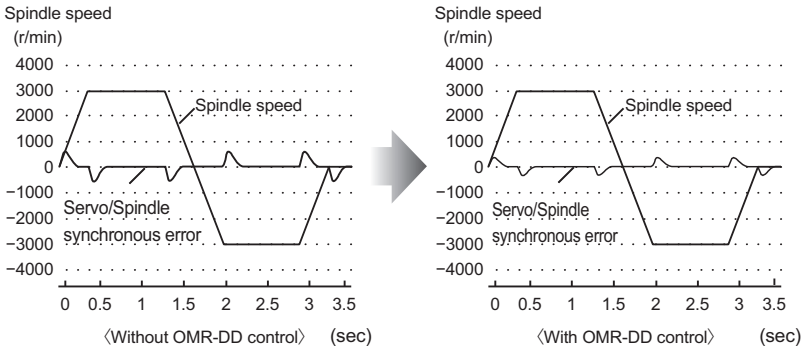


Position loop step response

3.2.7 High-speed Synchronous Tapping Control (OMR-DD Control)

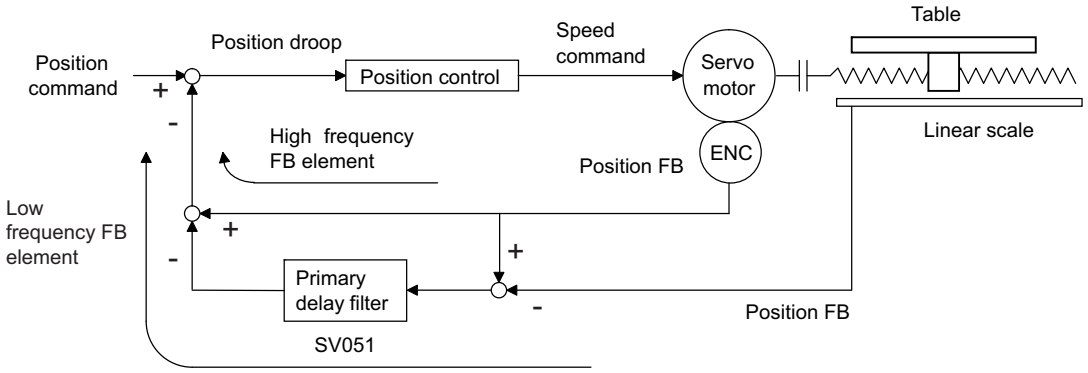
Servo drive unit detects the spindle position, and compensates the synchronization errors. This control enables more accurate tapping than the previous.

(Note) A spindle drive unit that controls the high-speed synchronous tapping (OMR-DD control) has to be connected on the farther side from the NC than the servo drive unit that is subject to the synchronous tapping control.



3.2.8 Dual Feedback Control

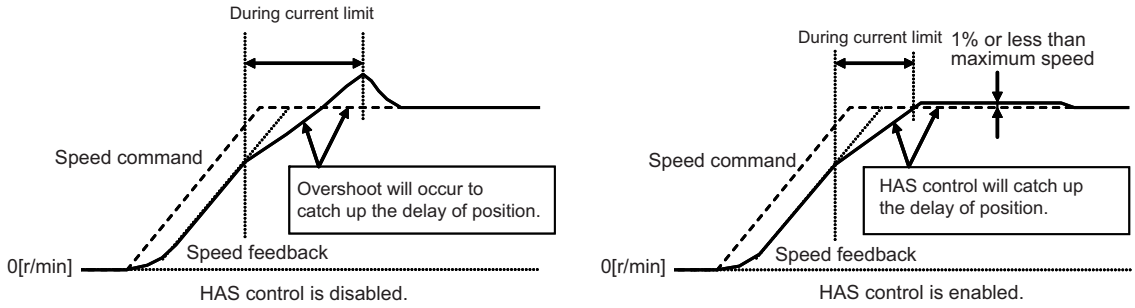
This function is used under full-closed loop control.
When a linear scale is used, the machine-end position, such as a table, is directly detected, which may render the position loop control unstable.
With this control, however, high-frequency components are eliminated from the machine-end feedback signals, which will lead to stable control.



Dual feedback control

3.2.9 HAS Control

If the torque output during acceleration/deceleration is close to the servo motor's maximum torque, the motor cannot accelerate with the commanded time constant when the torque is saturated due to input voltage fluctuation, etc. As a result, speed overshoot occurs when a constant speed command is issued, because the position droop for the delay is canceled.
With HAS control, however, this overshoot is smoothened so that the machine operation can be stable.



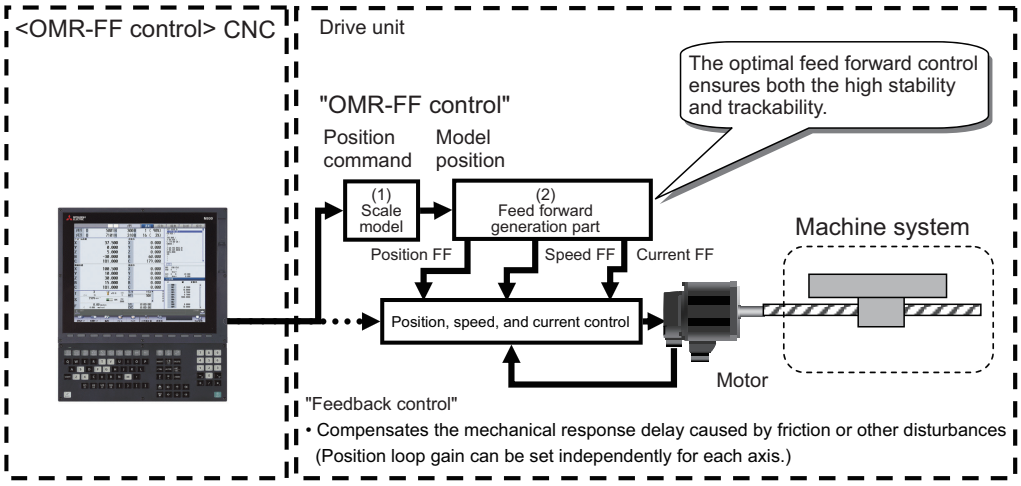
3.2.10 OMR-FF Control

OMR-FF control enables fine control by generating feed forward inside the drive unit and can realize the strict feedback control to the program command than the conventional high-speed accuracy control.
The conventional position control method causes machine vibration when increasing the gain because it ensures both the trackability to the position command and the servo rigidity to the friction or cutting load, etc. by setting the position loop gain (PGN).
OMR-FF function allows the improvement of the command trackability by independently deciding the trackability with the scale model position loop gain (PGM) and the servo rigidity with the position control gain (PGN).

OMR-FF control option for NC side is required when using this function.
It is recommended that this function is used for linear motors, direct-drive motors, or general motors in semi-closed loop control.

< Features >

(1) The command trackability can be decided independently of the position control gain (PGN) with the scale model position loop gain (PGM).
(2) Position loop gain (PGN) can be set for each axis.
-> Delay in the machine's response caused by friction or cutting load, etc. can be compensated with high gain.



3.2.11 Control Loop Gain Changeover

Position loop gain and speed loop gain are switched between non-interpolation mode, which is used during speed command, and interpolation mode, which is used during synchronous tapping and C axis control. By switching these gains, optimum control for each mode can be realized.

3.2.12 Spindle Output Stabilizing Control

Spindle motor's torque characteristic is suppressed due to voltage saturation in the high-speed rotation range, therefore the current control responsiveness significantly degrades, which may cause excessive current.
With this control, however, the current and flux commands are compensated to avoid the voltage saturation so that the current control responsiveness will not degrade.

3.2.13 High-response Spindle Acceleration/Deceleration Function

This function enables reduction of the spindle motor's setting time (from when the command value becomes 0 until when the motor actually stops) without being affected by the position loop gain, when the spindle motor stops under deceleration stop control using the S command.
This function is not active when the spindle is stopped while performing position control, such as orientation control and synchronous tapping control.

3.3 Compensation Control Function

3.3.1 Jitter Compensation

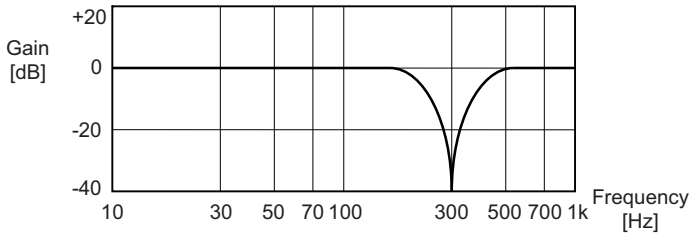
The load inertia becomes much smaller than usual if the motor position enters the machine backlash when the motor is stopped.
Because this means that an extremely large VGN1 is set for the load inertia, vibration may occur.
Jitter compensation can suppress the vibration that occurs at the motor stop by ignoring the backlash amount of speed feedback pulses when the speed feedback polarity changes.

3.3.2 Notch Filter

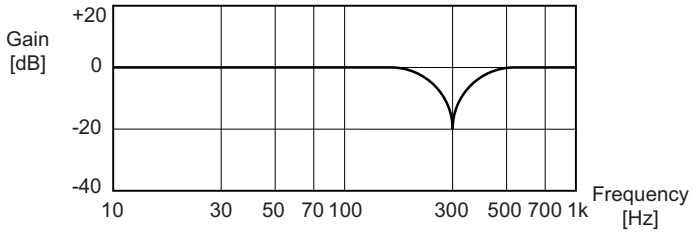
This filter can damp vibrations of servo torque commands at a specified frequency.
Machine vibrations can be suppressed by adjusting the notch filter frequency to the machine's resonance frequency.
Filter depth adjustment is also available that allows stable control even when the filter is set to an extremely low frequency.

<Specifications>

Notch filter	Frequency	Depth compensation
Notch filter 1	50Hz to 2250Hz	Enabled
Notch filter 2	50Hz to 2250Hz	Enabled
Notch filter 3	Fixed at 1125Hz	Disabled
Notch filter 4	50Hz to 2250Hz	Enabled
Notch filter 5	50Hz to 2250Hz	Enabled



Example of filter characteristic set to 300Hz



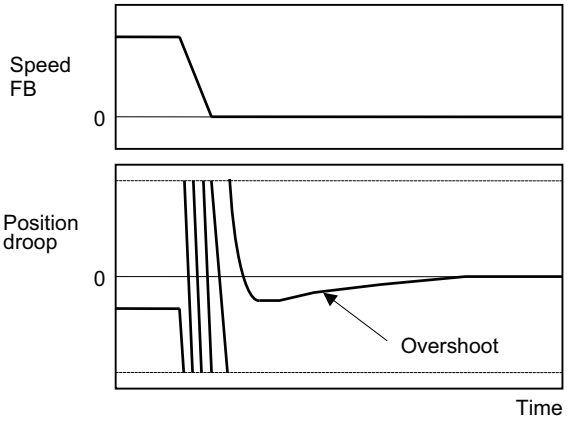
For shallow setting by additionally using the depth compensation at 300Hz

3.3.3 Adaptive Tracking-type Notch Filter

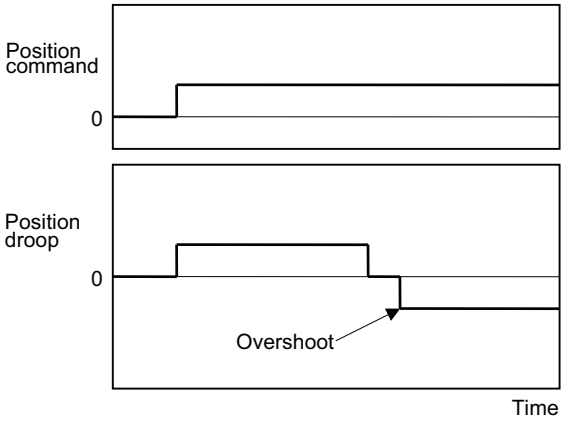
Machine's specific resonance frequency tends to change due to aged deterioration or according to machine's operation conditions. Therefore, the frequency may be deviated from the filter frequency set at the initial adjustment. With adaptive tracking-type notch filter, resonance point fluctuation due to the machine's condition change is estimated using the vibration components of the current commands, and effective notch filter frequency, which has been deviated from the setting value, is automatically corrected to suppress the resonance.

3.3.4 Overshooting Compensation

The phenomenon when the machine position goes past or exceeds the command during feed stopping is called overshooting.
In OVS compensation, the overshooting is suppressed by subtracting the torque command set in the parameters when the motor stops.



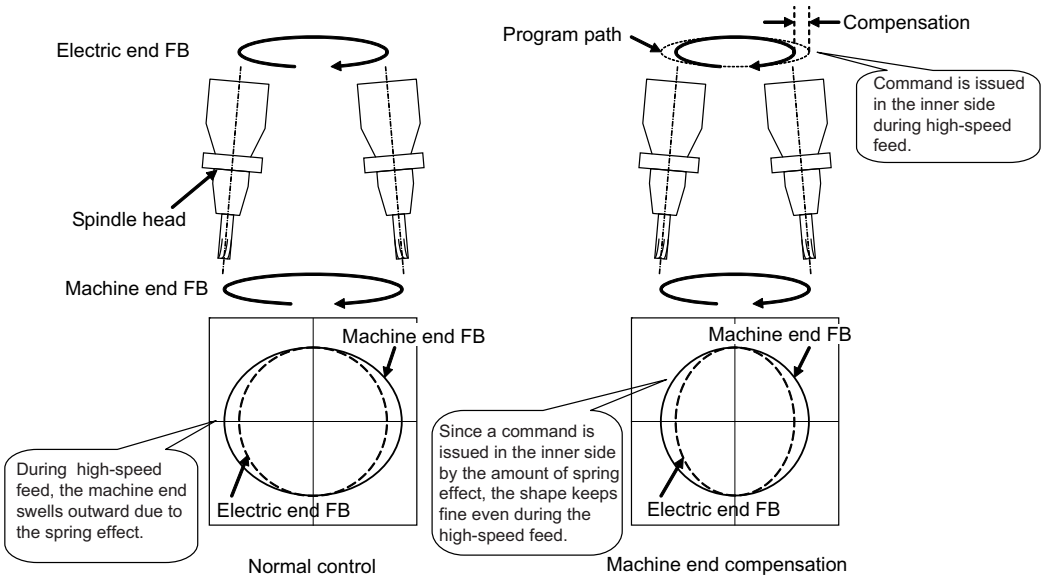
[1] Overshooting during rapid traverse settling



[2] Overshooting during pulse feed

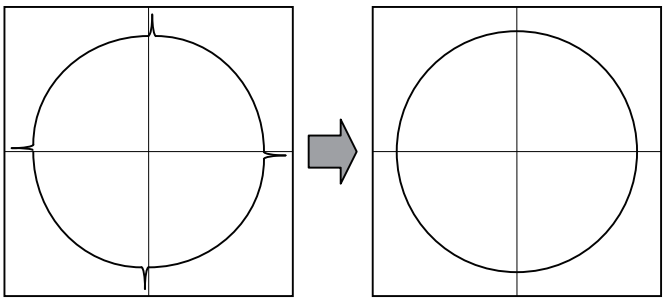
3.3.5 Machine End Compensation Control

The shape of the machine end during high-speed and high-speed acceleration operation is compensated by compensating the spring effect from the machine end to the motor end.
The shape may be fine during low-speed operation. However, at high speeds, the section from the machine end to the outer sides could swell. This function compensates that phenomenon.



3.3.6 Lost Motion Compensation Type 2

Servo motor always drives the machine opposing to the frictional force, and the torque which is required to oppose the friction during the axis movement is outputted by I control (Integral control) of the speed loop PI control. When the movement direction is changed, the frictional force works in the opposite direction momentarily, however, the machine will stop while the command torque is less than the frictional force as it takes some time to reverse the command torque in I control.
When the movement direction is changed, the frictional force works in the opposite direction momentarily, however, the machine will stop while the command torque is less than the frictional force as it takes some time to reverse the command torque in I control.
With the this lost motion compensation function improves the accuracy worsened by the stick motion.



No compensation　　With compensation

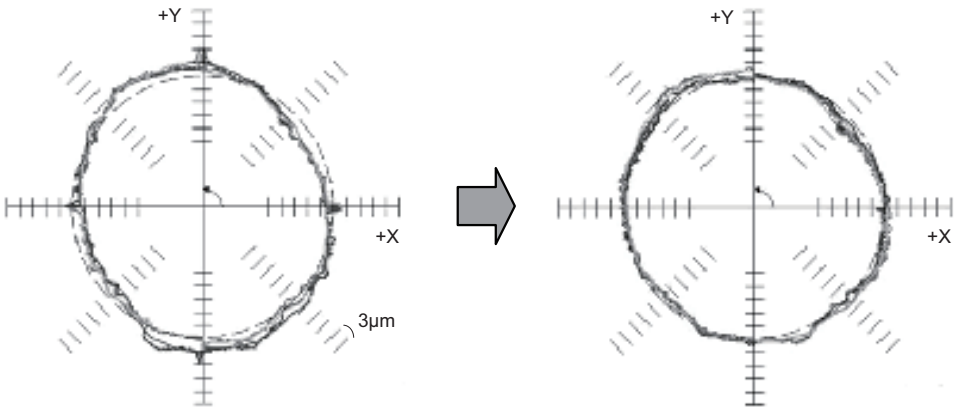
3.3.7 Lost Motion Compensation Type 3

For a machine model where the travel direction is reversed, the compensation in accordance with the changes in the cutting conditions is enabled by also considering the spring component and viscosity component in addition to the friction.
This function can be used to accommodate quadrant projection changes that accompany feed rate and circular radius changes which could not be compensated by Lost motion compensation type 2.

1.Mechanical spring elements can't be ignored.
2.Changes between static and dynamic frictions are wide and steep.

Not only frictions but spring element and viscosity element can be compensated, thus quadrant protrusions are suppressed within a wide band.

Conventional control can't perform enough compensation.



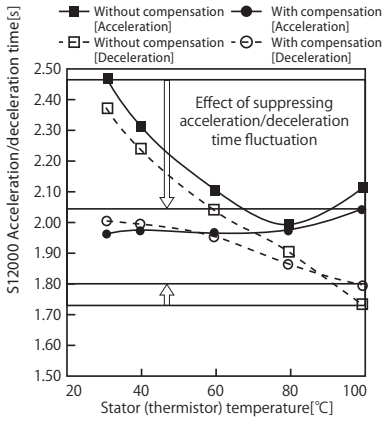
Conventional compensation control　　Lost motion compensation control type 3

3.3.8 Lost Motion Compensation Type 4

When the difference between static and dynamic friction is large, the friction torque changes sharply at the inversion of the travel direction. When the lost motion type 4 is used together with the type 2 or type 3, the acute change of the friction torque is compensated so that the path accuracy at the travel direction inversion can be enhanced.

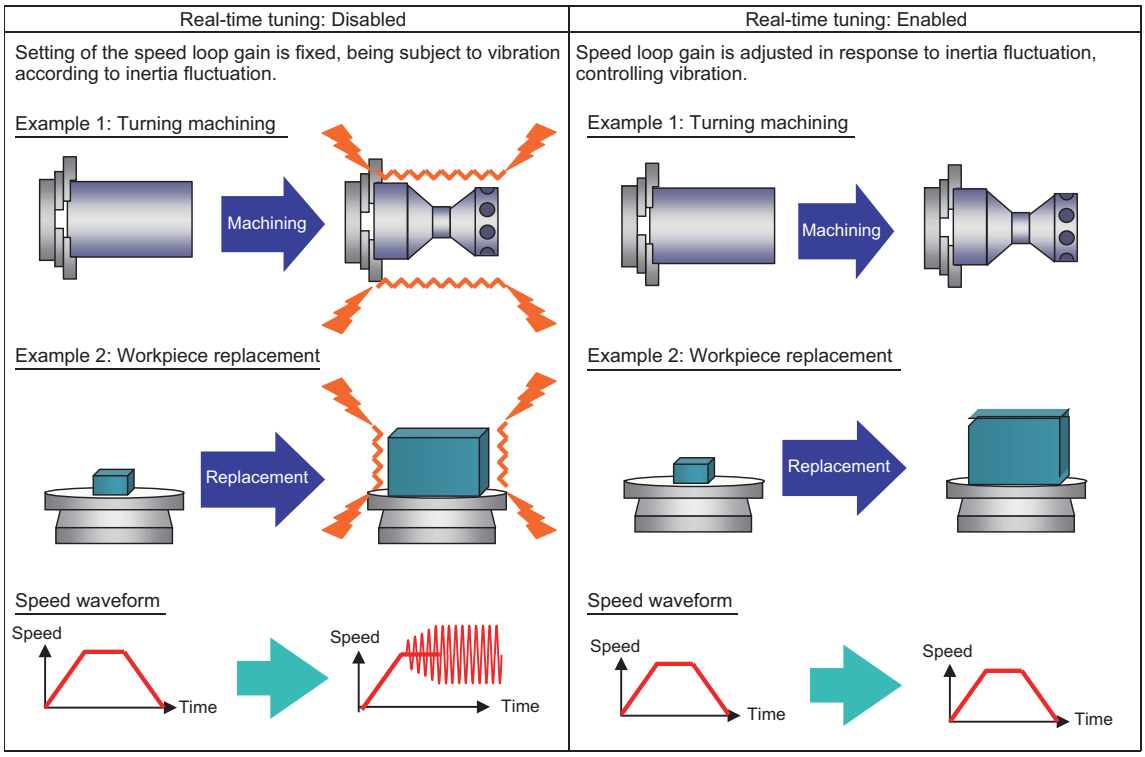
3.3.9 Spindle Motor Temperature Compensation Function

As for the low-temperature state of the IM spindle motor, the output characteristic may deteriorate in comparison with the warm-up state and the acceleration/deceleration time may become long, or the load display during cutting may become high immediately after operation. This function performs the control compensation depending on the motor temperature with the thermistor built into the spindle motor and suppresses the output characteristic deterioration when the temperature is low. Temperature compensation function is not required for IPM spindle motor in principle.



3.3.10 Real-time Tuning I

This function estimates the inertia of mechanical system and changes the speed loop gain automatically according to the inertia fluctuation to suppress mechanical vibration. In turning machining or workpiece replacement, this function suppresses mechanical vibration caused by inertia fluctuation.



Outline of real-time tuning

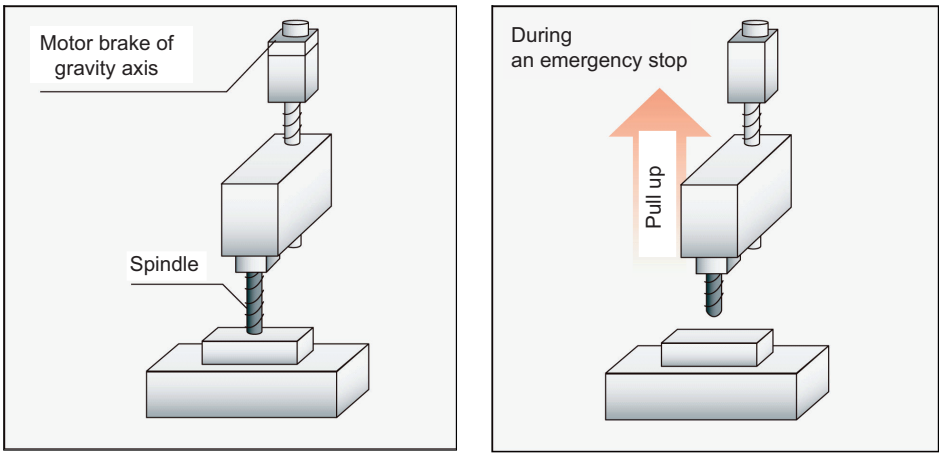
3.4 Protection Function

3.4.1 Deceleration Control at Emergency Stop

When an emergency stop (including NC failure, servo alarm) occurs, the motor will decelerate following the set time constant while maintaining the READY ON state.
READY will turn OFF and the dynamic brakes will function after stopping. The deceleration stop can be executed at a shorter distance than the dynamic brakes.

3.4.2 Vertical Axis Drop Prevention/Pull-up Control

If the READY OFF and brake operation are commanded at same time when an emergency stop occurs, the axis drops due to a delay in the brake operation.
The no-control time until the brakes activate can be eliminated by delaying the servo READY OFF sequence by the time set in the parameters.
Always use this function together with deceleration control.
When an emergency stop occurs in a vertical machining center, the Z axis is slightly pulled upwards before braking to compensate the drop of even a few μm caused by the brake backlash.



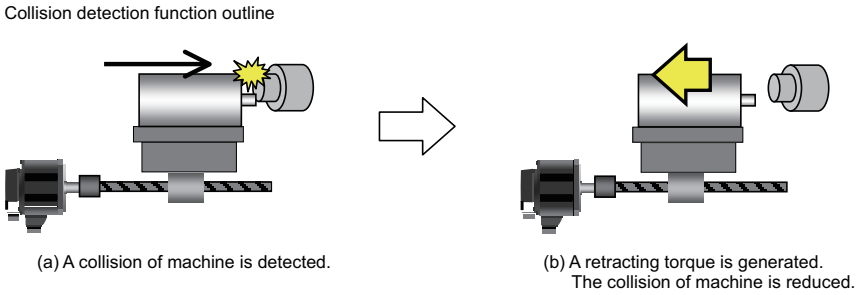
3.4.3 Earth Fault Detection

When an emergency stop is canceled, the earth fault current is measured using the power module's special switching circuit before Servo ready ON.
Specifying the faulty axis is possible in this detection, as the detection is carried out for each axis.

3.4.4 Collision Detection Function

Collision detection function quickly detects a collision of the motor shaft, and decelerates and stops the motor. This suppresses the generation of an excessive torque in the machine tool, and helps to prevent an abnormal state from occurring.Impact at a collision will not be prevented by using this collision detection function, so this function does not necessarily guarantee that the machine tool will not be damaged or that the machine accuracy will be maintained after a collision.

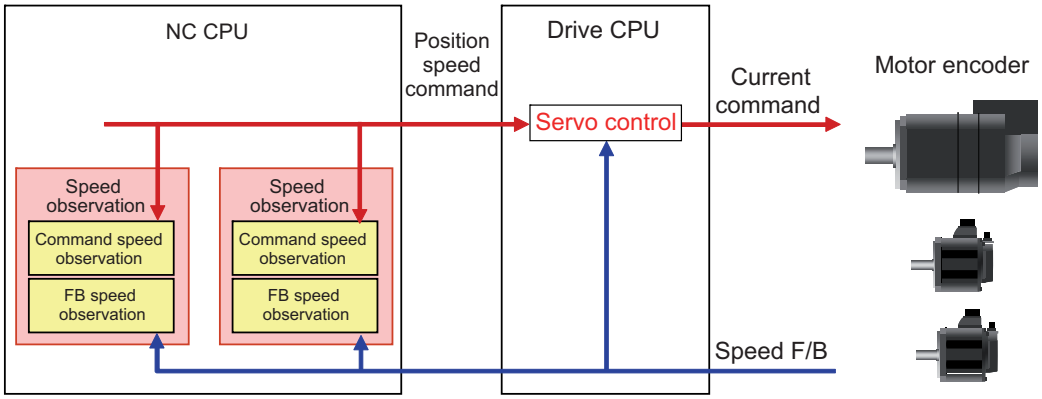
The same caution as during regular operation is required to prevent the machine from colliding.



3.4.5 SLS (Safely Limited Speed) Function

This function is aimed at allowing a safety access to the machine's working part by opening the safety door, etc. without shutting the power for saving the setup time.

Both the NC control system and drive system (servo and spindle drive units) doubly observe the axis feed rate so that it will not exceed the safety speed. If it exceeds the set safety speed, emergency stop occurs and the power is shut OFF.



3.4.6 Fan Stop Detection

The rotation of the radiation fin cooling fan is observed and when the fan stops rotating for a breakdown of the fan or an external factor, warning is detected.(The system will not be stopped.) Before sudden system down by the power module overheat, inspection and replacement of the fan are prompted.

3.4.7 Open-phase Detection

Disconnection of a phase of the 3-phase input power is detected.

The occurrence of abnormal operation will be avoided by open-phase detection because open-phase does not cause a power failure, however, abnormal operation will occur when the motor load becomes large.

3.4.8 Contactor Weld Detection

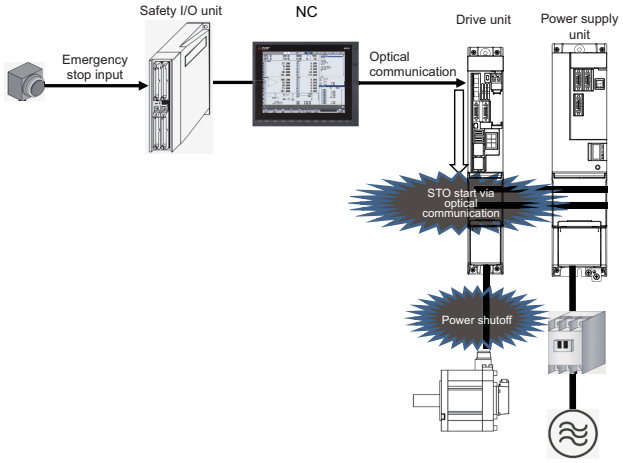
It detects that a contact of the external contactor is welding and cannot be opened.

3.4.9 STO (Safe Torque Off) Function

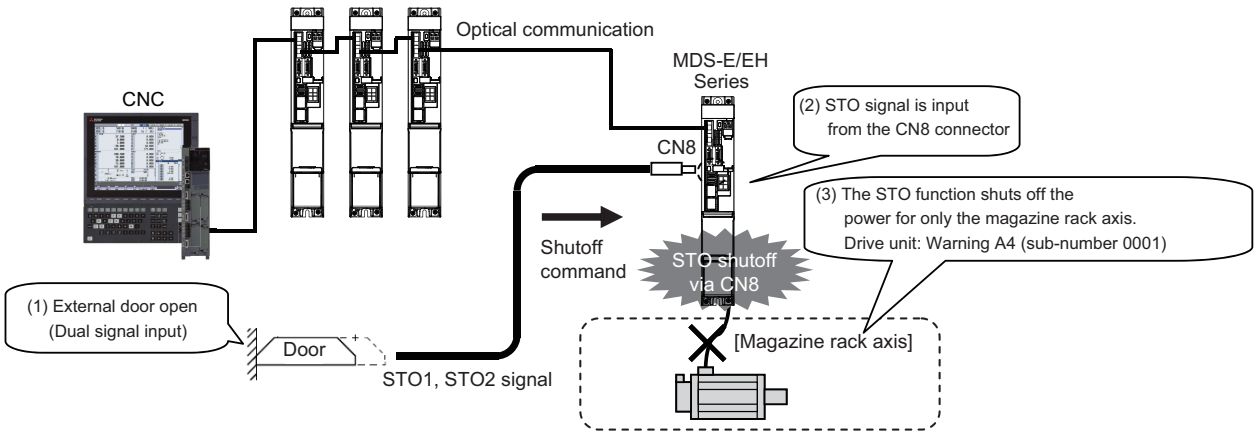
STO (Safe Torque Off) function is a shutoff function which stops the supply of energy to the motor capable of generating torque. It shuts off an energy supply electronically inside the drive unit.
It is an uncontrolled stop function in accordance with "IEC60204-1 Stop Category 0".

STO function can be used in the following two ways ([1] and [2] below), which directly input the STO signal from the external device by using a network cable and CN8 connector.

[1] When using network STO function
STO function shuts off the motor power by inputting the STO signal with a network cable.



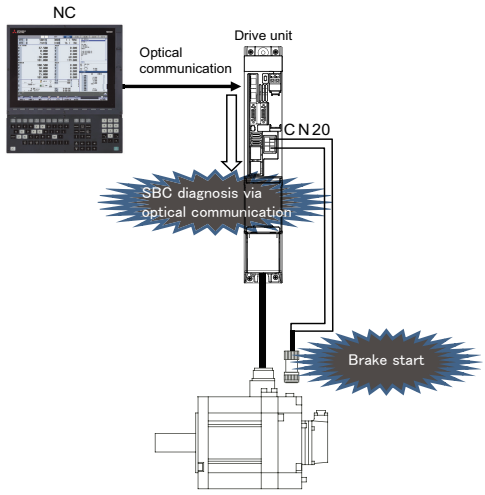
[2] When using dedicated wiring STO function
This method is used to shut off the motor power with STO function only for the specific axis.



3.4.10 SBC (Safe Brake Control) Function

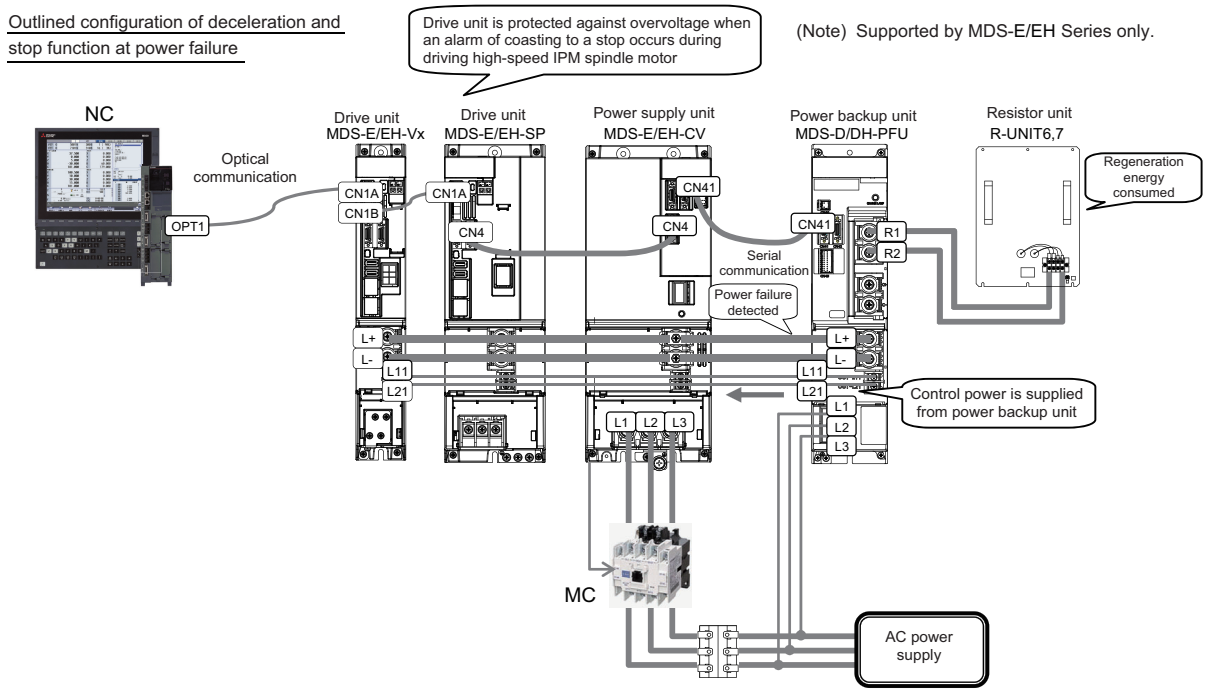
SBC observes operation of the two motor brake control contacts prepared on the servo drive unit to enhance the reliability of the brake operation.

* SBT (Safe Brake Test) function is also included in this function. Refer to the function specifications of NC.



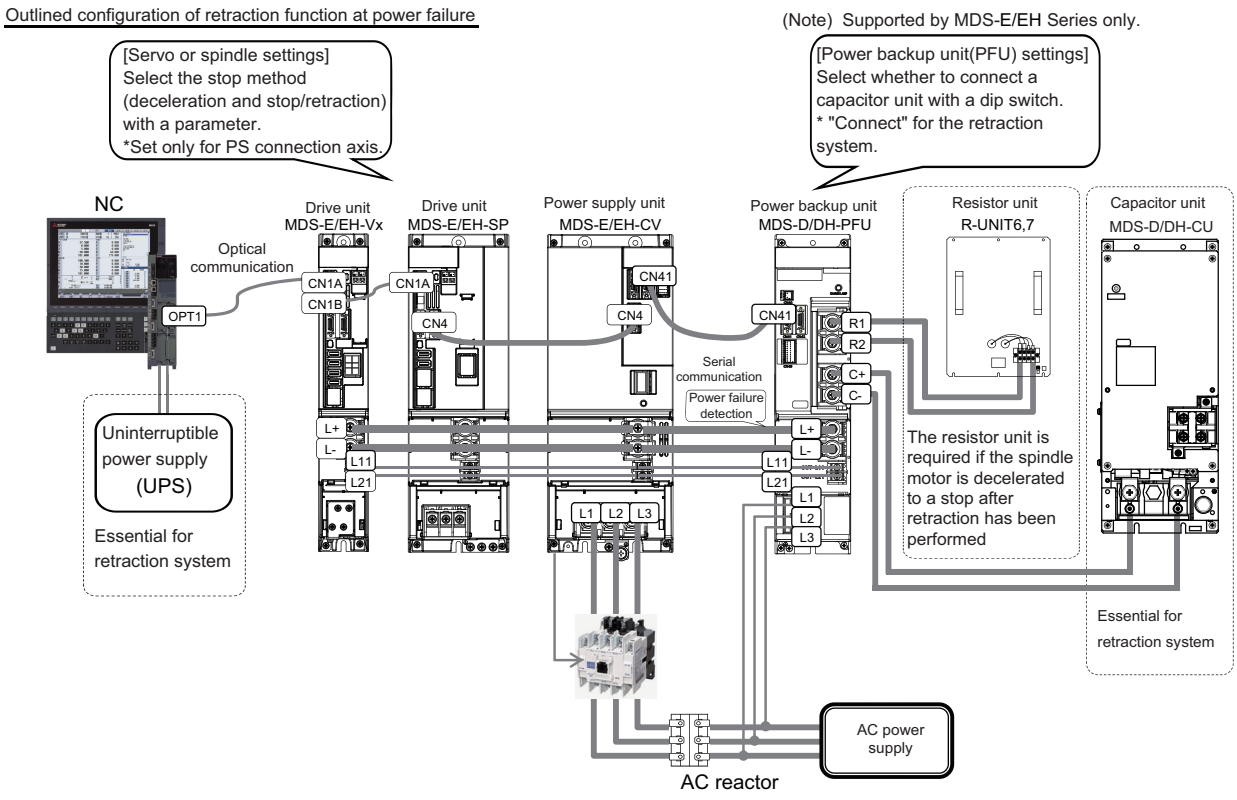
3.4.11 Deceleration and Stop Function at Power Failure

The deceleration and stop function at power failure is a function to safely decelerate the servo axes and the spindle when a power failure occurs. This function prevents a damage on the machine due to an overrun of the servo axes, and at the same time, realizes a protection against overvoltage for high-speed IPM spindle motors and high-speed DDMs.



3.4.12 Retraction Function at Power Failure

The retraction function at power failure is a function to backup the power of the main circuit from the capacitor unit and perform a tool escape by the retraction operation with the NC command when a power failure occurs.



3.5 Sequence Functions

3.5.1 Contactor Control Function

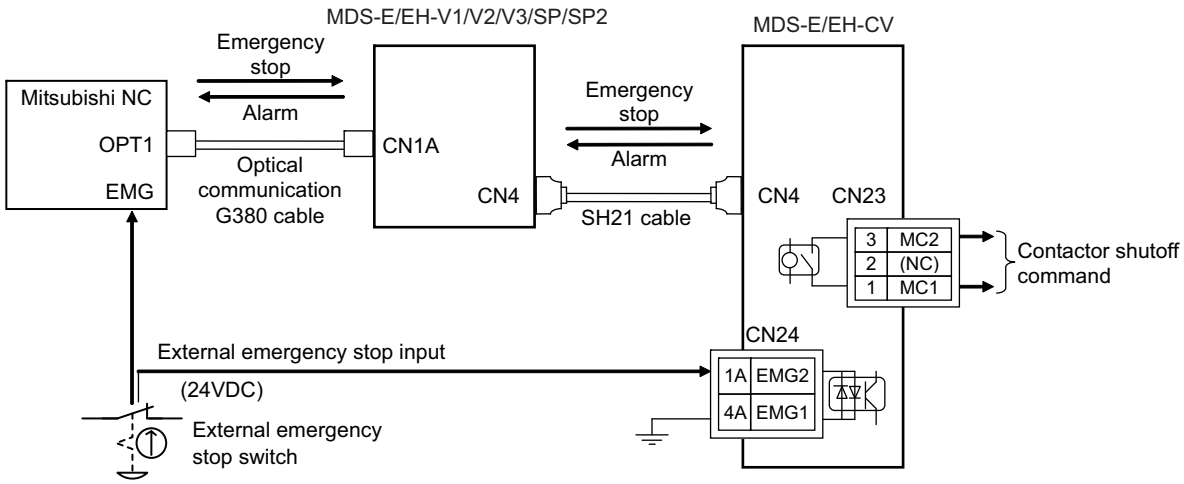
With this function, the contactor ON/OFF command is output from the power supply unit (or servo/spindle drive unit for integrated type) based on the judgement as to whether it is in emergency stop, emergency stop cancel, spindle deceleration and stop or vertical axis drop prevention control, etc.

3.5.2 Motor Brake Control Function

With this function, the brake ON/OFF command is output from the servo drive unit based on the judgement as to whether it is in emergency stop, emergency stop cancel or vertical axis drop prevention/pull-up control, etc.

3.5.3 External Emergency Stop Function

Besides the emergency stop input from the NC, double-protection when an emergency stop occurs can be provided by directly inputting an external emergency stop, which is a second emergency stop input, to the power supply unit (servo/spindle drive unit for integrated type).
Even if the emergency stop is not input from NC for some reason, the contactors will be activated by the external emergency stop input, and the power can be shut off.



3.5.4 Specified Speed Output

This function is to output a signal that indicates whether the machine-end speed has exceeded the speed specified with the parameter.
With this function, the safety door, etc. can be locked to secure the machine operator when the machine-end speed has exceeded the specified speed. This function can also be used for judging whether the current machine-end speed is higher than the specified speed.

3.5.5 Quick READY ON Sequence

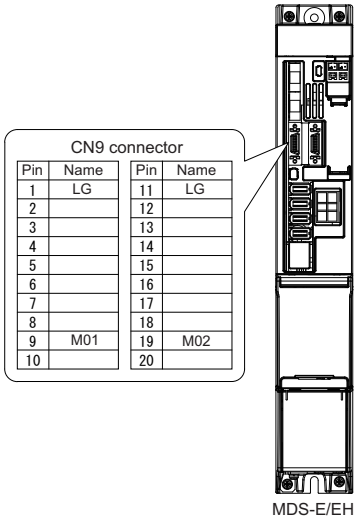
With this function, the charging time during READY ON is shortened according to the remaining charge capacity of the power supply unit. When returning to READY ON status immediately after the emergency stop input, the charging time can be shortened according to the remaining charge capacity and the time to READY ON is shortened.

3.6 Diagnosis Function

3.6.1 Monitor Output Function

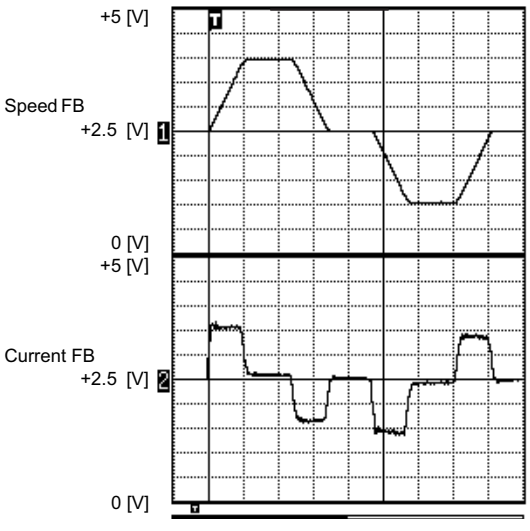
Drive unit has a function to D/A output the various control data. The servo and spindle adjustment data required for setting the servo and spindle parameters to match the machine can be D/A output. Measure using a high-speed waveform recorder, oscilloscope, etc.

D/A output specifications



Item	Explanation
No. of channels	2ch
Output cycle	0.8ms (min. value)
Output precision	12bit
Output voltage range	0V to 2.5V (zero) to +5V
Output magnification setting	-32768 to 32767 (1/100-fold)
Output pin (CN9 connector)	MO1 = Pin 9, MO2 = Pin 19, LG = Pin 1,11
Others	The D/A output for the 2-axis or 3-axis unit is also 2ch. When using the 2-axis or 3-axis unit, always set -1 for the output data (SV061, SV062 / SP125,SP126) of the axis that is not to be measured.

When the output data is 0, the offset voltage is 2.5V. If there is an offset voltage, adjust the zero level position in the measuring instrument side.



Example of D/A output waveform

3.6.2 Machine Resonance Frequency Display Function

If resonance is generated and it causes vibrations of the current commands, this function estimates the vibration frequency and displays it on the NC monitor screen (AFLT frequency).
This is useful in setting the notch filter frequencies during servo adjustment. This function constantly operates with no need of parameter setting.

3.6.3 Machine Inertia Display Function

With this function, the load current and acceleration rate during motor acceleration are measured to estimate the load inertia.
According to the parameter setting, the estimated load inertia is displayed on the NC monitor screen, expressed as its percentage to the motor inertia.

3.6.4 Motor Temperature Display Function

The temperature sensed by the thermal sensor attached to the motor coil is displayed on the NC screen.
(Note) This function is only compatible with Spindle motor.

3.6.5 Load Monitor Output Function

A spindle motor's load is output as an analog voltage of 0 to 3V (0 to 120%). To use this function, connect a load meter that meets the specifications.

3.6.6 Open Loop Control Function

This function is to run a spindle motor for operation check before or during the adjustment of the spindle motor's encoder. This allows the operation in which no encoder feedback signals are used.

3.6.7 Power Supply Diagnosis Display Function

The diagnosis information of the power supply(bus voltage and current) is displayed on the NC monitor screen.

3.6.8 Drive Unit Diagnosis Display Function

The diagnosis information of the servo and spindle drive unit (cooling fan rotation status and battery voltage) is displayed on the NC monitor screen.

4

Characteristics

4.1 Servo Motor

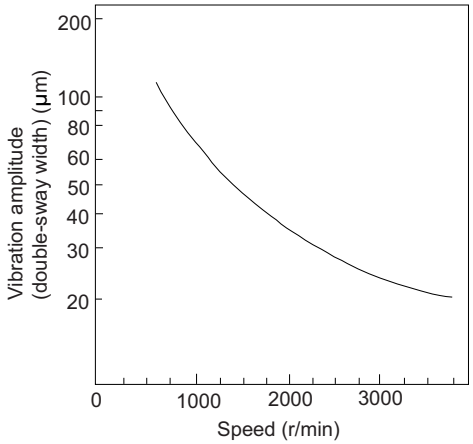
4.1.1 Environmental Conditions

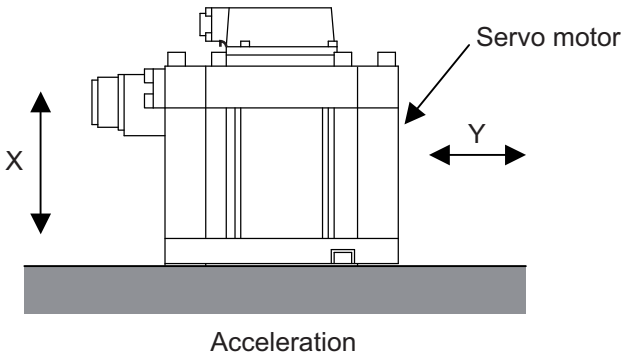
Environment	Conditions
Ambient temperature	0°C to +40°C (with no freezing)
Ambient humidity	80% RH or less (with no dew condensation)
Storage temperature	-15°C to +70°C (with no freezing)
Storage humidity	90% RH or less (with no dew condensation)
Atmosphere	Indoors (no direct sunlight) No corrosive gas, inflammable gas, oil mist or dust
Altitude	Operation / storage: 1000m or less above sea level Transportation: 10000m or less above sea level

4.1.2 Quakeproof Level

Series	Motor type	Acceleration direction	
		Axis direction (X)	Direction at right angle to axis (Y)
200V series	HG75, 105	24.5m/s^2 (2.5G) or less	24.5m/s^2 (2.5G) or less
	HG54, 104, 154, 224, 123, 223, 142		
	HG204, 354, 303, 453, 703, 302	24.5m/s^2 (2.5G) or less	29.4m/s^2 (3G) or less
	HG903	9.8m/s^2 (1G) or less	9.8m/s^2 (1G) or less
	HG46, 56, 96	49m/s^2 (5G) or less	49m/s^2 (5G) or less
400V series	HG-H75, 105	24.5m/s^2 (2.5G) or less	24.5m/s^2 (2.5G) or less
	HG-H54, 104, 154		
	HG-H204, 354, 453, 703	24.5m/s^2 (2.5G) or less	29.4m/s^2 (3G) or less
	HG-H903 HQ-H903, 1103	9.8m/s^2 (1G) or less	9.8m/s^2 (1G) or less
	HG-H1502	24.5m/s^2 (2.5G) or less	24.5m/s^2 (2.5G) or less

The vibration conditions are as shown below.





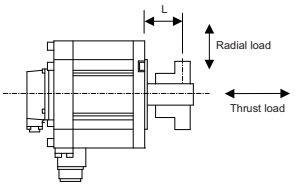
4.1.3 Shaft Characteristics

There is a limit to the load that can be applied on the motor shaft. Make sure that the load applied on the radial direction and thrust direction, when mounted on the machine, is below the tolerable values given below. These loads may affect the motor output torque, so consider them when designing the machine.

Series	Servo motor	Tolerable radial load	Tolerable thrust load
200V series	HG75T, 105T (Taper shaft)	245N (L=33)	147N
	HG75S, 105S (Straight shaft)	245N (L=33)	147N
	HG54T, 104T, 154T, 224T, 123T, 223T, 142T (Taper shaft)	392N (L=58)	490N
	HG54S, 104S, 154S, 224S, 123S, 223S, 142S (Straight shaft)	980N (L=55)	490N
	HG204S, 354S, 303S, 453S, 703S, 302S (Straight shaft)	2058N (L=79)	980N
	HG903S (Straight shaft)	2450N (L=85)	980N
	HG46S, HG56S (Straight shaft)	245N (L=30)	98N
	HG96S (Straight shaft)	392N (L=40)	147N
400V series	HG-H75T, 105T (Taper shaft)	245N (L=33)	147N
	HG-H75S, 105S (Straight shaft)	245N (L=33)	147N
	HG-H54T, 104T, 154T (Taper shaft)	392N (L=58)	490N
	HG-H54S, 104S, 154S (Straight shaft)	980N (L=55)	490N
	HG-H204S, 354S, 453S, 703S (Straight shaft)	2058N (L=79)	980N
	HG-H903S (Straight shaft)	2450N (L=85)	980N
	HG-H1502S (Straight shaft)	3234N (L=140)	1470N
	HQ-H903S (Straight shaft)	2500N (L=52.7)	1100N
	HQ-H1103S (Straight shaft)	2700N (L=52.7)	1500N

(Note 1) The tolerable radial load and thrust load in the above table are values applied when each motor is used independently.

(Note 2) The symbol L in the table refers to the value of L below.



L: Length from flange installation surface to center of load mass [mm]

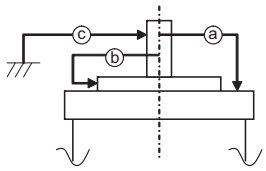
⚠ CAUTION

1. Use a flexible coupling when connecting with a ball screw, etc., and keep the shaft core deviation to below the tolerable radial load of the shaft.
2. When directly installing the gear on the motor shaft, the radial load increases as the diameter of the gear decreases. This should be carefully considered when designing the machine.
3. When directly installing the pulley on the motor shaft, carefully consider so that the radial load (double the tension) generated from the timing belt tension is less than the values shown in the table above.
4. In machines where thrust loads such as a worm gear are applied, carefully consider providing separate bearings, etc., on the machine side so that loads exceeding the tolerable thrust loads are not applied to the motor.
5. Do not apply the loads exceeding the tolerable level. Failure to observe this may lead to the axis or bearing damage.

4.1.4 Machine Accuracy

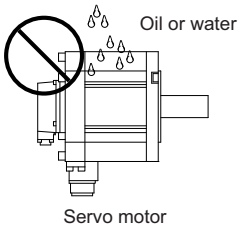
Machine accuracy of the servo motor's output shaft and around the installation part is as below.
(Excluding special products)

Accuracy	Measurement point	Flange size [mm]			
		Less than 100 SQ.	100 SQ., 130 SQ.	176 SQ. - 250 SQ.	280 SQ. or over
Run-out of the flange surface to the output shaft	a	0.05mm	0.06mm	0.08mm	0.08mm
Run-out of the flange surface's fitting outer diameter	b	0.04mm	0.04mm	0.06mm	0.08mm
Run-out of the output shaft end	c	0.02mm	0.02mm	0.03mm	0.03mm



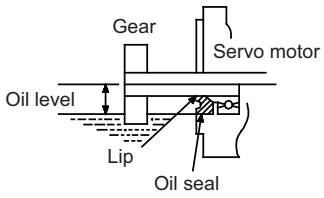
4.1.5 Oil / Water Standards

(1) The motor protective format uses the IP type, which complies with IEC Standard. (Refer to the section "Specifications List".)
However, these Standards are short-term performance specifications. They do not guarantee continuous environmental protection characteristics. Measures such as covers, etc., must be taken if there is any possibility that oil or water will fall on the motor, and the motor will be constantly wet and permeated by water. Note that the motor's IP-type is not indicated as corrosion-resistant.

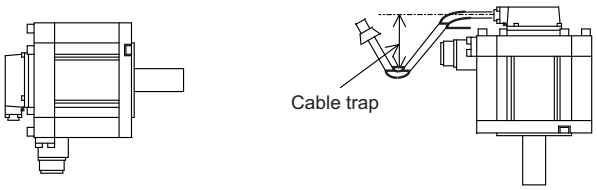


(2) When a gear box is installed on the servo motor, make sure that the oil level height from the center of the shaft is higher than the values given below. Open a breathing hole on the gear box so that the inner pressure does not rise.

Series	Servo motor	Oil level (mm)
200V series	HG75, 105	15
	HG54, 104, 154, 224, 123, 223, 142	22.5
	HG204, 354, 303, 453, 302	30
	HG703	30
	HG903	34
	HG46, 56	12.5
	HG96	15
400V series	HG-H75, 105	15
	HG-H54, 104, 154	22.5
	HG-H204, 354, 453	30
	HG-H703	30
	HG-H903	34
	HG-H1502	45
	HQ-H903, 1103	30



(3) When installing the servo motor horizontally, set the connector to face downward. When installing vertically or on an inclination, provide a cable trap because the liquid such as oil or water may enter the motor from the connector by running along the cable.



⚠ CAUTION

1. The servo motors, including those having IP67 specifications, do not have a completely waterproof (oil-proof) structure. Do not allow oil or water to constantly contact the motor, enter the motor, or accumulate on the motor. Oil can also enter the motor through cutting chip accumulation, so be careful of this also.
2. Oil may enter the motor from the clearance between the cable and connector. Protect with silicon not to make the clearance.
3. When the motor is installed facing upwards, take measures on the machine side so that gear oil, etc., does not flow onto the motor shaft.

4.1.6 Installation of Servo Motor

Mount the servo motor on a flange which has the following size or produces an equivalent or higher heat dissipation effect:

Flange size (mm)	Servo motor capacity
150×150×6	100W
250×250×6	200 to 400W
250×250×12	0.5 to 1.5kW
300×300×20	2.0 to 7.0kW
800×800×35	9.0 to 11.0kW

(Note) If enough flange size cannot be ensured, ensure the cooling performance by a cooling fan or operate the motor in the state that the motor overheat alarm does not occur.

4.1.7 Overload Protection Characteristics

The servo drive unit has an electronic thermal relay to protect the servo motor and servo drive unit from overloads. The operation characteristics of the electronic thermal relay are shown below when standard parameters (SV021=60, SV022=150) are set. If overload operation over the electronic thermal relay protection curve shown below is carried out, overload 1 (alarm 50) will occur. If the maximum torque is commanded continuously for one second or more due to a machine collision, etc., overload 2 (alarm 51) will occur.

4.1.8 Magnetic Brake

> **⚠ CAUTION**
>
> 1. The axis will not be mechanically held even when the dynamic brakes are used. If the machine could drop when the power fails, use a servo motor with magnetic brakes or provide an external brake mechanism as holding means to prevent dropping.
> 2. The magnetic brakes are used for holding, and must not be used for normal braking. There may be cases when holding is not possible due to the life or machine structure (when ball screw and servo motor are coupled with a timing belt, etc.). Provide a stop device on the machine side to ensure safety.
> 3. When operating the brakes, always turn the servo OFF (or ready OFF). When releasing the brakes, always confirm that the servo is ON first. Sequence control considering this condition is possible by using the brake contact connection terminal on the servo drive unit.
> 4. When the vertical axis drop prevention function is used, the drop of the vertical axis during an emergency stop can be suppressed to the minimum.

(1) Motor with magnetic brake

(a) Types

The motor with a magnetic brake is set for each motor. The "B" following the standard motor model stands for the motor with a brake.

(b) Applications

When this type of motor is used for the vertical feed axis in a machining center, etc., slipping and dropping of the spindle head can be prevented even when the hydraulic balancer's hydraulic pressure reaches zero when the power turns OFF. When used with a robot, deviation of the posture when the power is turned OFF can be prevented.

When used for the feed axis of a grinding machine, a double safety measures is formed with the deceleration stop (dynamic brake stop) during emergency stop, and the risks of colliding with the grinding stone and scattering can be prevented.

This motor cannot be used for the purposes other than holding and braking during a power failure (emergency stop). (This cannot be used for normal deceleration, etc.)

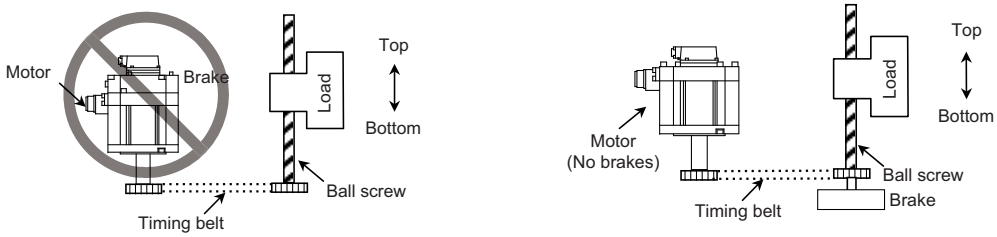
(c) Features

[1] The magnetic brakes use a DC excitation method, thus:
- The brake mechanism is simple and the reliability is high.
- There is no need to change the brake tap between 50Hz and 60Hz.
- There is no rush current when the excitation occurs, and shock does not occur.
- The brake section is not larger than the motor section.

[2] The magnetic brake is built into the motor, and the installation dimensions are the same as the motor without brake.

(d) Cautions for using a timing belt

Connecting the motor with magnetic brakes and the load (ball screw, etc.) with a timing belt as shown on the left below could pose a hazard if the belt snaps. Even if the belt's safety coefficient is increased, the belt could snap if the tension is too high or if cutting chips get imbedded. Safety can be maintained by using the method shown on the right below.



(2) Magnetic brake characteristics

(Note 1) There is no manual release mechanism. If handling is required such as during the machine core alignment work, prepare a separate 24VDC power supply, and electrically release a brake.

(Note 2) These are the values added to the servo motor without a brake.

(Note 3) This is the representative value for the initial attraction gap at 20°C.

(Note 4) The brake gap will widen through brake lining wear caused by braking. However, the gap cannot be adjusted. Thus, the brake life is considered to be reached when adjustments are required.

(Note 5) A leakage flux will be generated at the shaft end of the servo motor with a magnetic brake.

(Note 6) When operating in low speed regions, the sound of loose brake lining may be heard. However, this is not a problem in terms of function.

(3) Magnetic brake power supply

⚠ CAUTION

1. When using the DO output of motor brake control connector CN9 to provide brake excitation circuit, be sure to install a surge absorber on the brake terminal. CN20 requires no surge absorber.
2. Do not pull out the cannon plug while the brake power is ON. The cannon plug pins could be damaged by sparks.

(a) Brake excitation power supply

[1] Prepare a brake excitation power supply that can accurately ensure the attraction current in consideration of the voltage fluctuation and excitation coil temperature.

[2] The brake terminal polarity is random. Make sure not to mistake the terminals with other circuits.

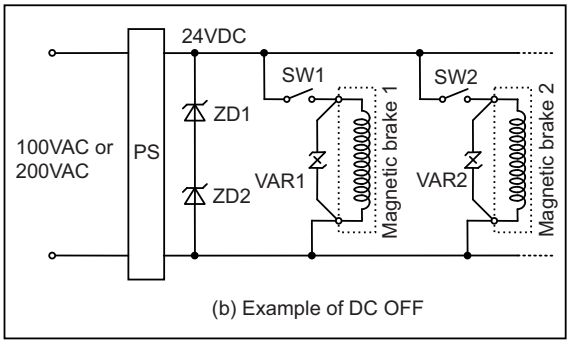
(b) Bake excitation circuit

When turning OFF the brake excitation power supply (to apply the brake), DC OFF is used to shorten the braking delay time.

A surge absorber will be required. Pay attention to the relay cut off capacity.

<Cautions>

- Provide sufficient DC cut off capacity at the contact.
- Always use a surge absorber.
- When using the cannon plug type, the surge absorber will be further away, so use shielded wires between the motor and surge absorber.



PS : 24VDC stabilized power supply
ZD1,ZD2 : Zener diode for power supply protection (1W, 24V)
VAR1,VAR2 : Surge absorber

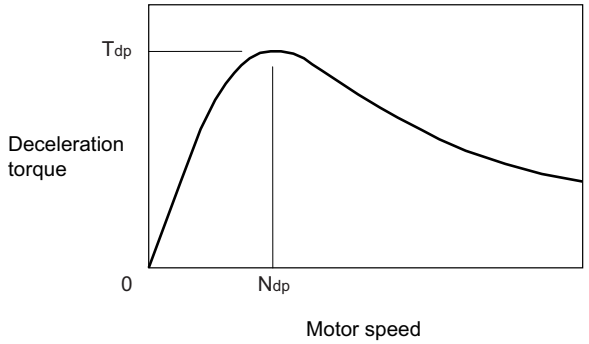
Magnetic brake circuits

4.1.9 Dynamic Brake Characteristics

If a servo alarm that cannot control the motor occurs, the dynamic brakes will function to stop the servo motor regardless of the parameter settings.

(1) Deceleration torque

The dynamic brake uses the motor as a generator, and obtains the deceleration torque by consuming that energy with the dynamic brake resistance. The characteristics of this deceleration torque have a maximum deceleration torque (Tdp) regarding the motor speed as shown in the following drawing. The torque for each motor is shown in the following table.



Deceleration torque characteristics of a dynamic brake

Max. deceleration torque of a dynamic brake

Motor type (200V series)	Stall torque (N•m)	Tdp (N•m)	Ndp (r/min)	Motor type (400V series)	Stall torque (N•m)	Tdp (N•m)	Ndp (r/min)
HG75	2.0	3.42	1150	**HG-H75**	2.0	4.87	1331

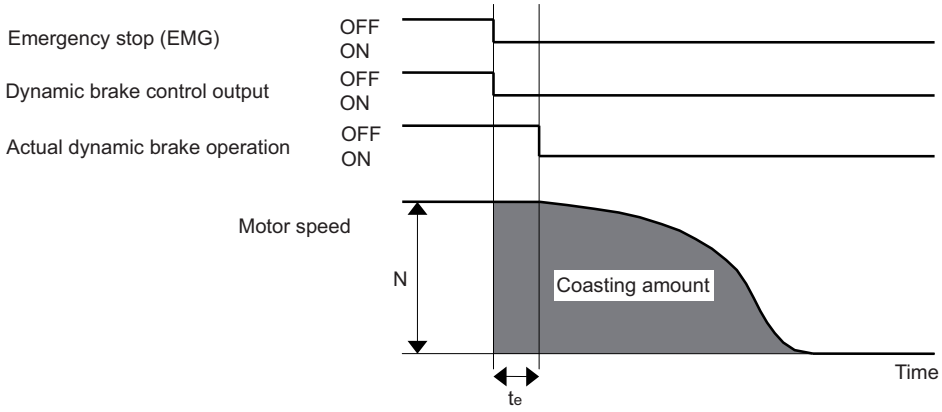
(2) Coasting rotation distance during emergency stop

The distance that the motor coasts (angle for rotary axis) when stopping with the dynamic brakes can be approximated with the following expression.

$$L_{MAX} = \frac{F}{60} \cdot \{ t_e + (1 + \frac{J_L}{J_M}) \cdot (A \cdot N^2 + B) \}$$

L_{MAX}	: Motor coasting distance (angle)	[mm, (deg)]
F	: Axis feedrate	[mm/min, (deg/min)]
N	: Motor speed	[r/min]
J_M	: Motor inertia	[$\times 10^{-4}$kg•m^2]
J_L	: Motor shaft conversion load inertia	[$\times 10^{-4}$kg•m^2]
t_e	: Brake drive relay delay time	[s] (Normally, 0.03s)
A	: Coefficient A (Refer to the following table)	
B	: Coefficient B (Refer to the following table)	



Dynamic brake braking diagram

Coasting amount calculation coefficients table

Motor type	J_M ($\times 10^{-4}$kg•m^2)	A	B	Motor type	J_M ($\times 10^{-4}$kg•m^2)	A	B

4.2 Spindle Motor

4.2.1 Environmental Conditions

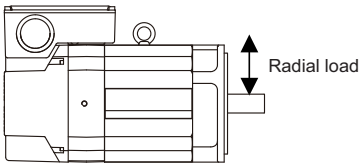
Environment	Conditions
Ambient temperature	0°C to +40°C (with no freezing)
Ambient humidity	90%RH or less (with no dew condensation)
Storage temperature	-20°C to +65°C (with no freezing)
Storage humidity	90%RH or less (with no dew condensation)
Atmosphere	Indoors (Where unit is not subject to direct sunlight) No corrosive gases, flammable gases, oil mist or dust
Altitude	Operation/storage: 1000m or less above sea level Transportation: 10000m or less above sea level
Vibration	X:29.4m/s^2 (3G) Y:29.4m/s^2 (3G)

(Note) Refer to each spindle motor specifications for details on the spindle motor vibration class.

4.2.2 Shaft Characteristics

There is a limit to the load that can be applied on the motor shaft. Make sure that the load applied on the radial direction, when mounted on the machine, is below the tolerable values given below. These loads may affect the motor output torque, so consider them when designing the machine.

Series	Spindle motor	Tolerable radial load
200V series	**SJ-VL11-05FZT-S01**	98N
	SJ-VL2.2-02ZT	196N
	SJ-DL5.5/150-01T, SJ-DL5.5/200-01T,SJ-V3.7-02ZT,SJ-VL11-02FZT, SJ-VL18.5-05FZT	245N
	SJ-DL0.75/100-01T, SJ-DL1.5/100-01T	490N
	SJ-D3.7/100-01, SJ-D5.5/120-02,SJ-DJ5.5/100-01,SJ-DJ5.5/120-01, SJ-DL7.5/150-01T,SJ-V2.2-01T,SJ-V7.5-03ZT,SJ-DG3.7/120-03T	980N
	SJ-D5.5/100-01, SJ-D5.5/120-01,SJ-DJ7.5/100-01, SJ-DJ7.5/120-01, SJ-DG5.5/120-04T	1470N
	SJ-D7.5/100-01,SJ-D7.5/120-01,SJ-D11/100-01,SJ-DJ11/100-01, SJ-DJ15/80-01,SJ-V11-08ZT,SJ-V11-13ZT,SJ-V11-01T, SJ-DG7.5/120-05T, SJ-DG11/100-03T	1960N
	SJ-V22-06ZT	2450N
	SJ-V15-01ZT,SJ-V15-09ZT,SJ-V18.5-01ZT,SJ-V18.5-04ZT,SJ-V22-01ZT, SJ-V22-04ZT,SJ-V26-01ZT,SJ-V11-09T,SJ-V15-03T,SJ-V18.5-03T,SJ-V22-05T	2940N
	SJ-V37-01ZT, SJ-V45-01ZT, SJ-V22-09T, SJ-VK22-19ZT	3920N
	SJ-V55-01ZT	5880N
400V series	**SJ-4-V2.2-03T, SJ-4-V3.7-03T, SJ-4-V7.5-13ZT**	980N
	SJ-4-V5.5-07T	1470N
	SJ-4-V7.5-12T, SJ-4-V11-18ZT	1960N
	SJ-4-V26-08ZT	2450N
	SJ-4-V18.5-14T, SJ-4-V22-15T, SJ-4-V22-18ZT, SJ-4-V15-20T, SJ-4-V22-16T	2940N
	SJ-4-V45-02T	3920N
	SJ-4-V55-03T	5880N



(Note) The load point is at the one-half of the shaft length.

⚠ CAUTION

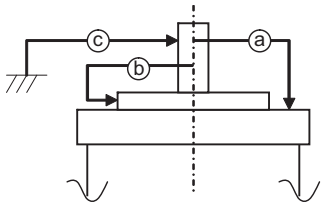
Consider on the machine side so that the thrust loads are not applied to the spindle motor.

4.2.3 Machine Accuracy

Machine accuracy of the spindle motor's output shaft and around the installation part is as below.
(Excluding special products)

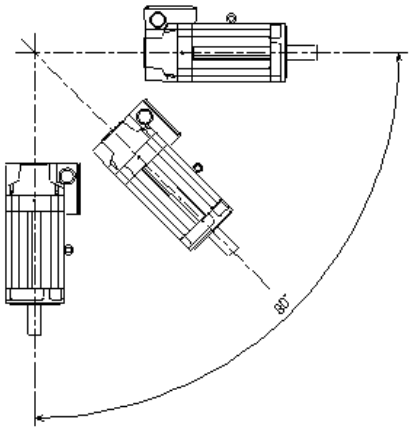
Accuracy	Measurement point	Frame No.	
		A71, B71, A90, B90, C90, D90, E90, A112, B112	A160, B160, C160, A180, B180, A225
Run-out of the flange surface to the output shaft	a	0.03mm	0.05mm
Run-out of the flange surface's fitting outer diameter	b	0.02mm	0.04mm
Run-out of the output shaft end	c	0.01mm	0.02mm

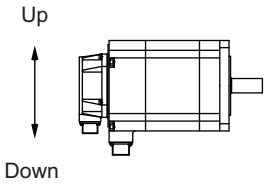
(Note) Refer to Specifications Manual for the frame number of each spindle motor.



4.2.4 Installation of Spindle Motor

Make sure that the spindle motor is installed so that the motor shaft points from downward to 90° as shown below. When installing upward more than 90°, contact your Mitsubishi Electric dealer.



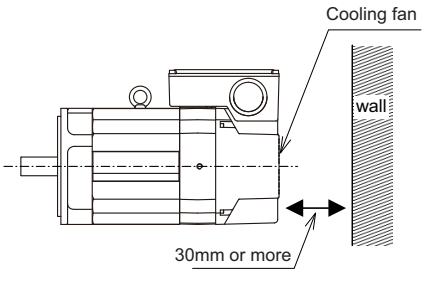


Standard installation direction
for connector connection type

The spindle motor whose motor power line and detection lead wires are connected with connectors, as a standard, should be installed with the connectors facing down. Installation in the standard direction is effective against dripping. Measure to prevent oil and water must be taken when not installing in the standard direction.

> **⚠ CAUTION**
>
> 1. Rubber packing for waterproof is attached on the inner surface of the top cover of terminal block.
> After checking that the packing is installed, install the top cover.
> 2. When installing a motor on a flange, chamfer(C1) the part of flange that touches inside low part of the motor.

To yield good cooling performance, provide a space of at least 30mm between the cooling fan and wall. If the motor is covered by a structure and the air is not exchanged, its cooling performance degrades and the motor is unable to fully exercise its performance, which may cause the spindle motor overheat alarm. Do not use the spindle motor in an enclosed space with little ventilation.



4.3 Tool Spindle Motor

4.3.1 Environmental Conditions

Environment	Conditions
Ambient temperature	0°C to +40°C (with no freezing)
Ambient humidity	80% RH or less (with no dew condensation)
Storage temperature	-15°C to +70°C (with no freezing)
Storage humidity	90% RH or less (with no dew condensation)
Atmosphere	Indoors (no direct sunlight) No corrosive gas, inflammable gas, oil mist or dust
Altitude	Operation/storage: 1000m or less above sea level Transportation: 10000m or less above sea level
Vibration	X:19.6m/s^2 (2G) Y:19.6m/s^2 (2G)

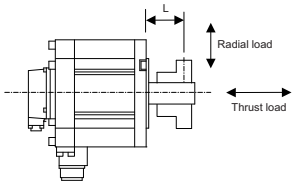
4.3.2 Shaft Characteristics

There is a limit to the load that can be applied on the motor shaft. Make sure that the load applied on the radial direction, when mounted on the machine, is below the tolerable values given below. These loads may affect the motor output torque, so consider them when designing the machine.

Tool spindle motor	Tolerable radial load	Tolerable thrust load
HG46, 56	245N (L=30)	98N
HG96	392N (L=40)	147N
HG75S, 105S	245N (L=33)	147N
HG54S, 104S, 154S, 224S	980N (L=55)	490N
HG204S, 354S,453S,703S	2058N (L=79)	980N
HG903S	2450(L=85)	980N

(Note 1) The tolerable radial load and thrust load in the above table are values applied when each motor is used independently.

(Note 2) The symbol L in the table refers to the value of L below.

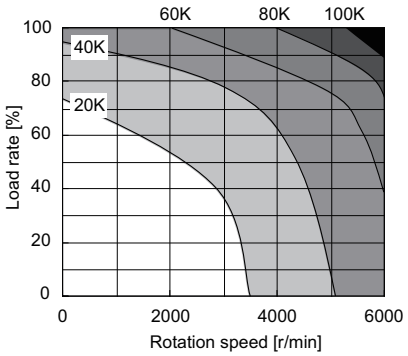


L: Length from flange installation surface to center of load mass [mm]

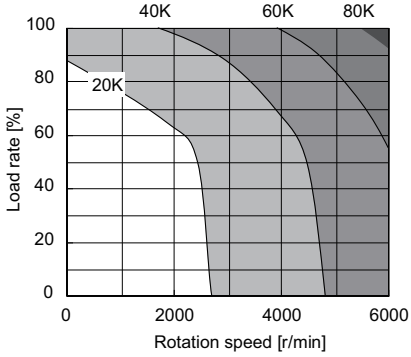
4.3.3 Tool Spindle Temperature Characteristics

< HG Series >

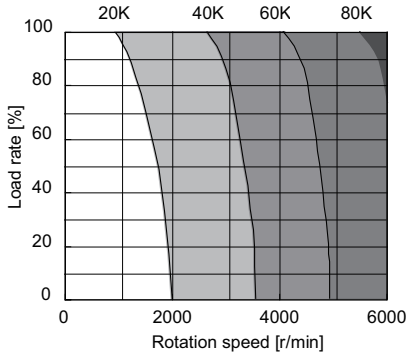
[HG46]



[HG56]



[HG96]



> **⚠ CAUTION**
>
> 1. The contour lines 20K to 100K in the graph indicate the temperature rising values from the start-up to saturation.
> 2. The motor temperature tends to rise in a high-speed rotation even if the load rate is low.

4.3.4 Installation of Tool Spindle Motor

Mount the servo motor on a flange which has the following size or produces an equivalent or higher heat dissipation effect:

Flange size (mm)	Tool spindle motor capacity
250×250×6	400W
250×250×12	0.5 to 1.5kW
300×300×20	2.0 to 7.0kW
800×800×35	9.0kW

4.4 Drive Unit

4.4.1 Environmental Conditions

Environment	Conditions
Ambient temperature	0°C to +55°C (with no freezing)
Ambient humidity	90% RH or less (with no dew condensation)
Storage temperature	-15°C to +70°C (with no freezing)
Storage humidity	90% RH or less (with no dew condensation)
Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles
Altitude	Operation/storage: 1000m or less above sea level Transportation: 13000m or less above sea level
Vibration	Operation/storage: 4.9m/s^2 (0.5G) or less Transportation: 49m/s^2(5G) or less

(Note) When installing the machine at 1,000m or more above sea level, the heat dissipation characteristics will drop as the altitude increases in proportion to the air density. The ambient temperature drops 1% with every 100m increase in altitude.
When installing the machine at 1,800m altitude, the heating value of the drive unit must be reduced to 92% or less. The heating value is proportional to the square of the current, and required current decreasing rate follows the expression below.

$$\text{Required current decreasing rate} = \sqrt{0.92} = 0.95$$

Therefore, use the unit with the reduced effective load rate to 95% or less.

4.4.2 Heating Value

The values for the servo drive unit apply at the stall output. The values for the spindle drive unit apply for the continuous rated output. The values for the power supply unit include the AC reactor's heating value.

< MDS-E Series >

Servo drive unit					Spindle drive unit					Power supply unit			Power backup unit	
Type MDS-E-	Heating value [W]		Type MDS-E-	Heating value [W]		Type MDS-E-	Heating value [W]		Type MDS-E-	Heating value [W]		Type MDS-E-	Heating value [W]		Type MDS-D-	Heating value [W]
	In-side panel	Out-side panel		In-side panel	Out-side panel		In-side panel	Out-side panel		In-side panel	Out-side panel		In-side panel	Out-side panel

V1-200	105	630				**SP-480**	232	1488	**CV-550**	164	431		
						SP-600	310	2039	**CV-750**	228	614		

POINT

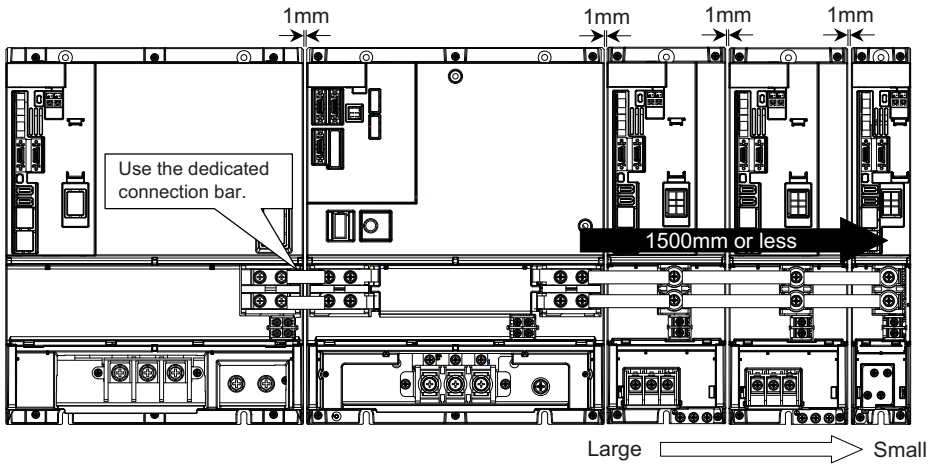
1. Design the panel's heating value taking the actual axis operation (load rate) into consideration.
2. The heating values in the above tables are calculated with the following load rates.

Unit	Load rate
Servo drive unit	50%
Spindle drive unit	100%
Power supply unit	100%

4.4.3 Drive Unit Arrangement

Arrange the drive units in the following procedure.

(1) Install a power supply unit.
(2) Arrange drive units in order of the nominal current from largest from the right.
(3) In the arrangement, the clearance between the units is 1 mm.
(4) Arrange the drive units with the DC connection length from the power supply unit being 1500mm or less. For the arrangement of 1500mm or more, multiple power supply units are required.
(5) Arrange large capacity drive units at the left of the power supply unit with the clearance between the drive units being 1mm.



Arrange drive units in order of nominal current from largest.

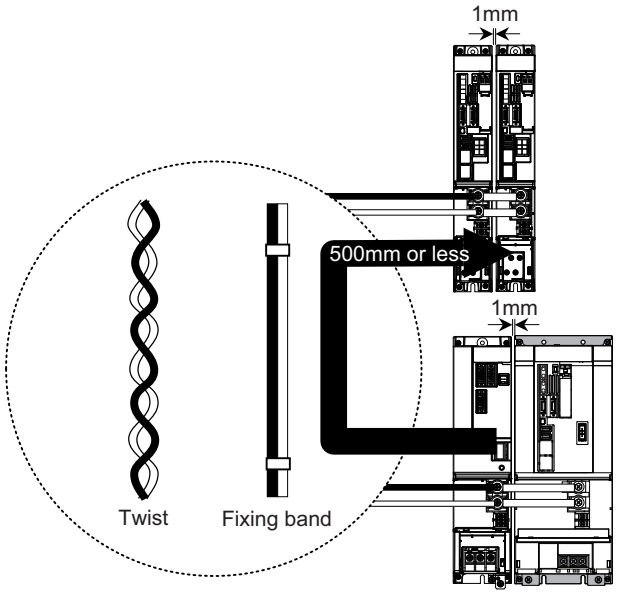
POINT

1. Arrange large capacity drive units at the left of the power supply unit with the clearance between the drive units being 1mm.
2. Power supply units equivalent to the number of large capacity drive units are required.
3. When arranging the drive unit at the right of the large capacity power supply unit, remove the side protection cover of the power supply unit.
4. MDS-E-SP-400/640, MDS-EH-SP-200/320/480/600, and MDS-EH-V1-200 are the large capacity drive units.

< For separated arrangement of drive units >

Arranging drive units in the horizontal as much as possible is recommended. Thus, if the drive units must be arranged in the vertical, or if the drive units must be separated by more than 30mm, arrange them with the DC connection length of 500mm or less.

The total length must be 1500mm or less.



⚠ CAUTION

1. E: For MDS-E-V1-320W, MDS-E-SP-240 to 640, the separated wiring is not available.
   EH: For MDS-EH-V1-160W to 200, MDS-EH-SP-160 to 600, the separated wiring is not available.
2. If the drive units are separated by more than 30mm, twist the wires used for the DC connection or bundle them with a fixing band in order to prevent two wires from being separated.
3. Failure to observe the above arrangement could damage the units.

5

Dedicated Options

5.1 Servo Options

The option units are required depending on the servo system configuration. Check the option units to be required referring the following items.

(1) System establishment in the full closed loop control

Refer to the table below to confirm the interface unit (I/F) and battery option required for the full closed loop control.

(a) Full closed loop control for linear axis

Machine side encoder to be used			Encoder signal output	Interface unit	Drive unit input signal	Battery option	Remarks
Incre-mental encoder	Rectangular wave signal output	SR74, SR84 (Magnescale)	Rectangular wave signal	-	Rectangular wave signal	-	
		Various scale	Rectangular wave signal	-	Rectangular wave signal	-	
	SIN wave signal output	LS187, LS487 (HEIDENHAIN)	SIN wave signal	IBV series (HEIDENHAIN)	Rectangular wave signal	-	
				EIB series (HEIDENHAIN)	Mitsubishi serial signal	-	
				APE series (HEIDENHAIN)	Mitsubishi serial signal	-	
		LS187C, LS487C (HEIDENHAIN)	SIN wave signal	MDS-B-HR-11(P) (Mitsubishi Electric)	Mitsubishi serial signal	(Required) (Note 1)	Distance-coded reference scale (Note 2)
				EIB series (HEIDENHAIN)			
		Various scale	SIN wave signal	MDS-B-HR-11(P) (Mitsubishi Electric)	Mitsubishi serial signal	(Required) (Note 1)	Distance-coded reference scale is also available (Note 2)
				EIB series (HEIDENHAIN)			
	Mitsubishi serial signal output	SR75, SR85 (Magnescale)	Mitsubishi serial signal	-	Mitsubishi serial signal	-	
Abso-lute position encoder	Mitsubishi serial signal output	OSA105ET2A OSA166ET2NA (Mitsubishi Electric)	Mitsubishi serial signal	-	Mitsubishi serial signal	Required	Ball screw side encoder
		SR27,SR77, SR87, SR67A (Magnescale)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		LC195M, LC495M, LC291M (HEIDENHAIN)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	Mistu03-04
		LC193M, LC493M (HEIDENHAIN)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	Mistu02-04
		AT343, AT543, AT545, ST748 (Mitutoyo)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		SAM Series (FAGOR)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		SVAM Series (FAGOR)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		GAM Series (FAGOR)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		LAM Series (FAGOR)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		RL40N Series (Renishaw)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		AMS-ABS-3B Series (Schneeberger)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
	SIN wave signal output	MPS Series (Mitsubishi Heavy Industries)	SIN wave signal	ADB-20J60 (Mitsubishi Heavy Industries)	Mitsubishi serial signal	Required	
		MPI Series (Mitsubishi Heavy Industries)	SIN wave signal	ADS-20J60 (Mitsubishi Heavy Industries)	Mitsubishi serial signal		

(Note 1) When using the distance-coded reference scale, it is recommended to use with distance-coded reference check function. In this case, the battery option is required.

(Note 2) The distance-coded reference scale is the supported option for M800 Series.

(b) Full closed loop control for rotary axis

Machine side encoder to be used			Encoder signal output	Interface unit	Output signal	Battery option	Remarks
Incre-mental encoder	ectangular wave signal output	Various scale	Rectangular wave signal	-	Rectangular wave signal	-	
	SIN wave signal output	ERM280 Series (HEIDENHAIN)	SIN wave signal	EIB series (HEIDENHAIN)	Mitsubishi serial signal	-	
		Various scale	SIN wave signal	MDS-B-HR-11(P) (Mitsubishi Electric)	Mitsubishi serial signal	(Required) (Note 1)	Distance-coded reference scale is also available (Note 2)
Abso-lute position encoder	Mitsubishi serial signal output	MBA405W Series (Mitsubishi Electric)	Mitsubishi serial signal	(Provided)	Mitsubishi serial signal	Not required	
		RU77 (Magnescale)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		RCN223M, RCN227M (HEIDENHAIN)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	Mistu02-04
		RCN727M, RCN827M (HEIDENHAIN)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	Mistu02-04
		RA Series (Renishaw)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
		HAM Series (FAGOR)	Mitsubishi serial signal	-	Mitsubishi serial signal	Not required	
	SIN wave signal output	MPRZ Series (Mitsubishi Heavy Industries)	SIN wave signal	ADB-20J71 (Mitsubishi Heavy Industries)	Mitsubishi serial signal	Not required	
		MPI Series (Mitsubishi Heavy Industries)	SIN wave signal	ADB-20J60 (Mitsubishi Heavy Industries)	Mitsubishi serial signal	Required	

(Note 1) When using the distance-coded reference scale, it is recommended to use with distance-coded reference check function. In this case, the battery option is required.

(Note 2) The distance-coded reference scale is the supported option for M800 Series.

POINT

The absolute position system cannot be established in combination with the relative position (incremental) machine side encoder and absolute position motor side encoder.

(2) System establishment in the synchronous control

(a) Position command synchronous control

The synchronous control is all executed in the NC, and the each servo is controlled as an independent axis. Therefore, preparing special options for the synchronous control is not required on the servo side.

(b) Speed command synchronization control

The common position control in two axes is performed by one linear scale. Basically, the multi axes integrated type drive unit (MDS-E/EH-V2/V3) is used, and the feedback signal is divided for two axes inside the drive unit.
When the two 1-axis type drive units are used in driving the large capacity servo motor, the linear scale feedback signal must be divided outside.

<Required option in the speed command synchronous control>

Machine side encoder to be used	For MDS-E/EH-V2/V3	For MDS-E/EH-V1×2units	Remarks
SIN wave signal output scale	MDS-B-HR-11(P) (Serial conversion)	MDS-B-HR-12(P) (Serial conversion/signal division)	
Mitsubishi serial signal output scale	-	MDS-B-SD (Signal division)	Including the case that an interface unit of the scale manufacturer is used with SIN wave output scale.

(Note 1) The rectangular wave signal output scale speed command synchronous control is not available.
(Note 2) The distance-coded reference scale speed command synchronous control is not available.

POINT

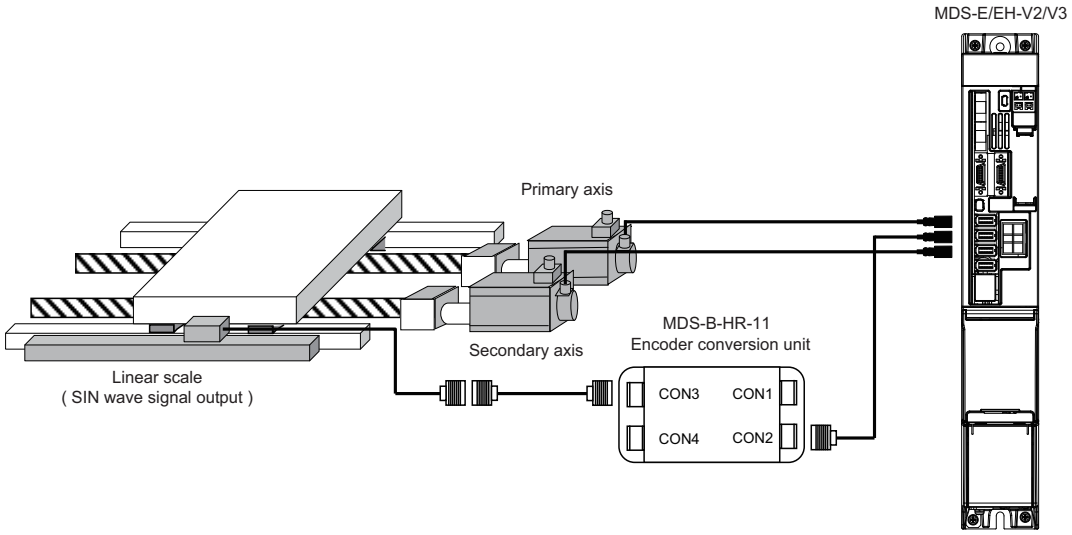
1. When executing the synchronous control, use the servo motors of which the type and encoder specifications are same.
2. When performing the speed command synchronous control with 2-axis drive unit (MDS-E/EH-V2), make sure to set L-axis as primary axis. When performing the speed command synchronous control with 3-axis drive unit (MDS-E-V3), make sure to set L-axis as primary axis and M-axis as secondary axis. Other settings cause the initial parameter error alarm.

< Speed command synchronization control system configuration >

1) SIN wave signal output scale

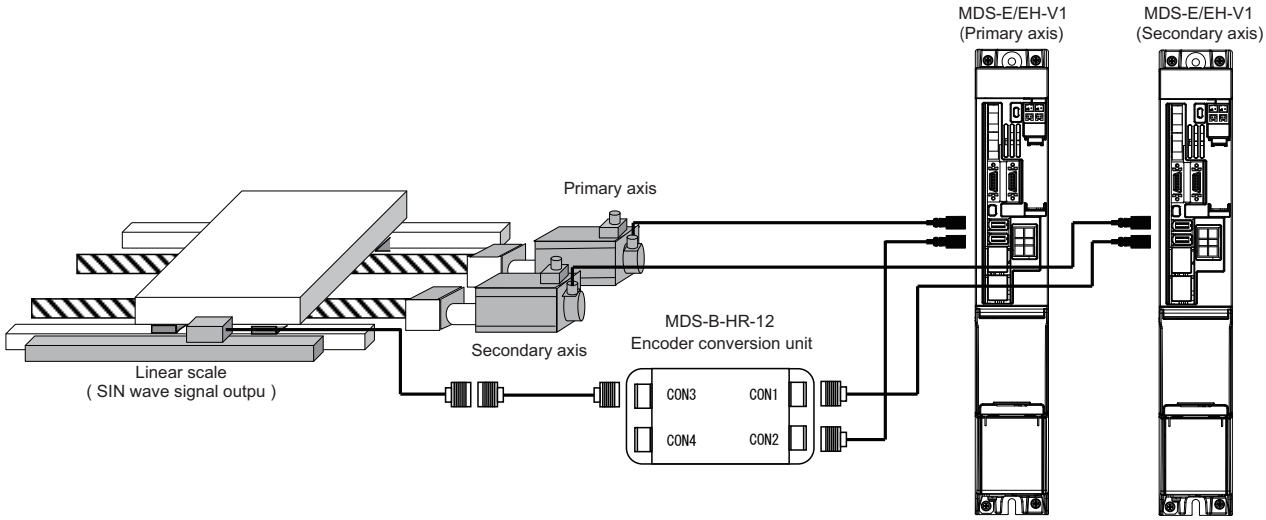
< When using MDS-E/EH-V2/V3 >

For the FB signal of the linear scale, the SIN wave signal is converted to Mitsubishi serial signal with the encoder conversion unit (MDS-B-HR-11), and that signal is divided to each axis control inside 2-axis or 3-axis drive unit.



<When using two units of MDS-E/EH-V1>

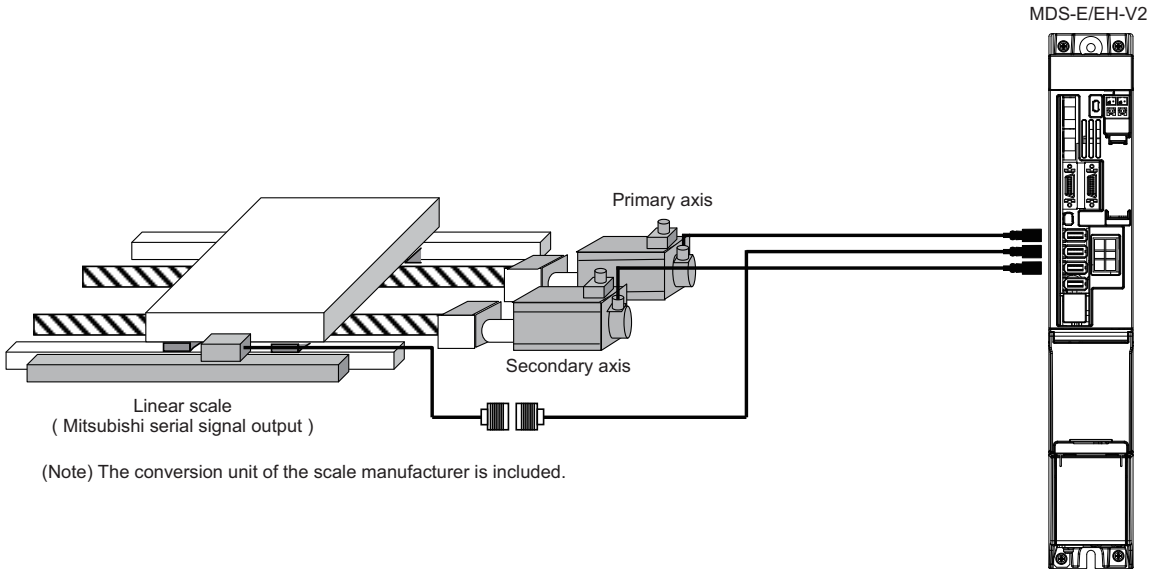
For the FB signal of the linear scale, the SIN wave signal is converted to Mitsubishi serial signal with the encoder conversion unit (MDS-B-HR-12), and that signal is divided to each drive unit.



2) Mitsubishi serial signal output scale

< When using MDS-E/EH-V2 >

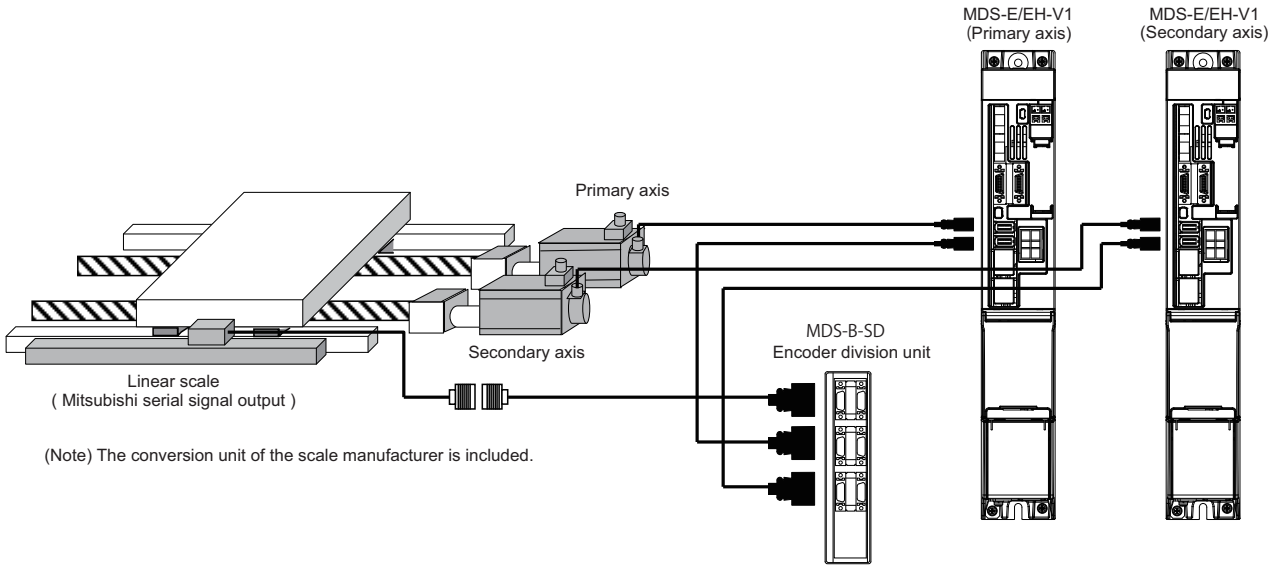
The FB signal of the linear scale is divided to each axis control inside 2-axis drive unit. An external option unit is not required.



(Note) The conversion unit of the scale manufacturer is included.

< When using two units of MDS-E/EH-V1 >

The FB signal of the linear scale is divided to each drive unit with the signal division unit (MDS-B-SD).



(Note) The conversion unit of the scale manufacturer is included.

5.1.1 Dynamic Brake Unit (MDS-D-DBU)

The MDS-E-V1-320W and MDS-EH-V1-160W or larger units do not have dynamic brakes built in, so install an external dynamic brake unit.

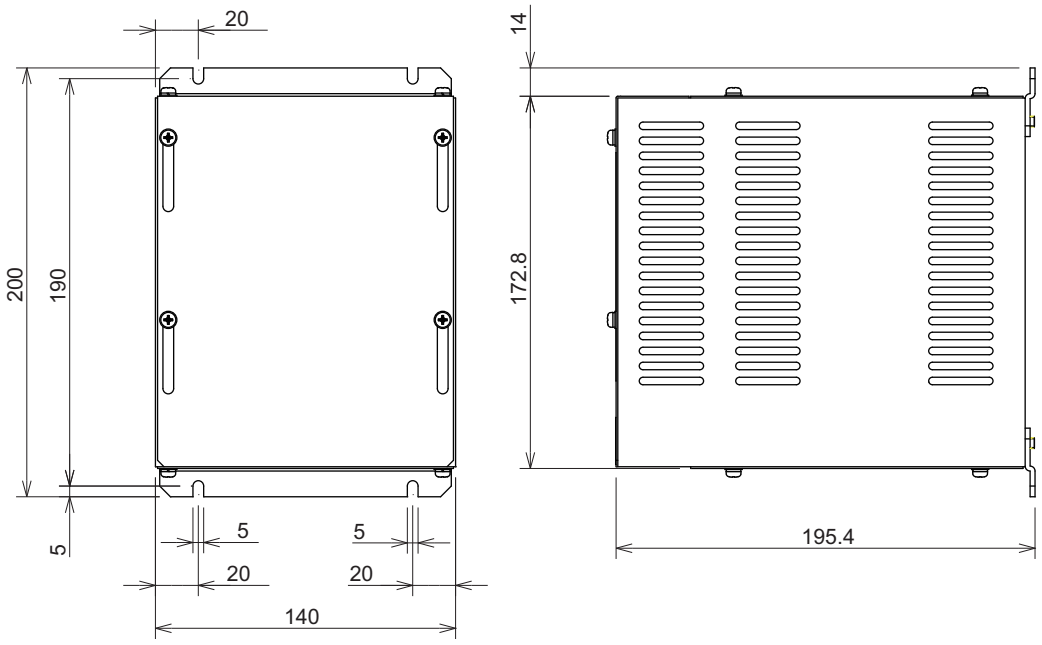
(1) Specifications

Type	Coil specifications	Wire size	Compatible drive unit	Mass (kg)
MDS-D-DBU	24VDC 160mA	5.5mm^2 or more (For IV wire)	MDS-E-V1-320W MDS-EH-V1-160W or larger	3kg

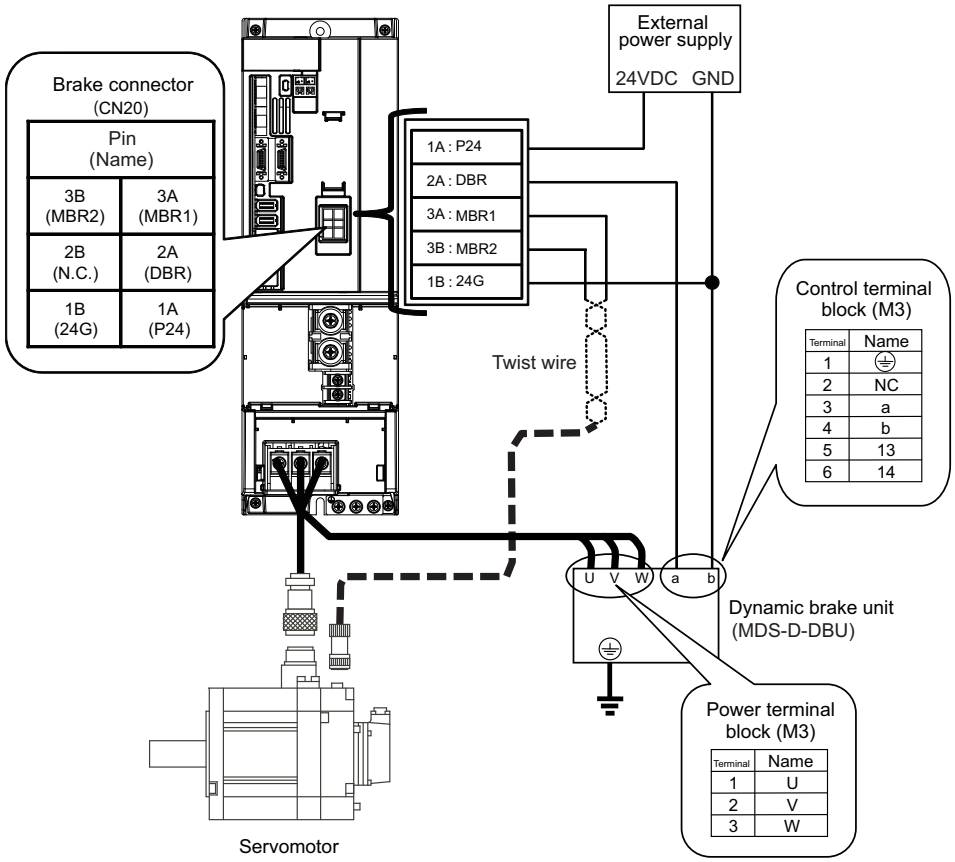
(2) Outline dimension drawings

MDS-D-DBU

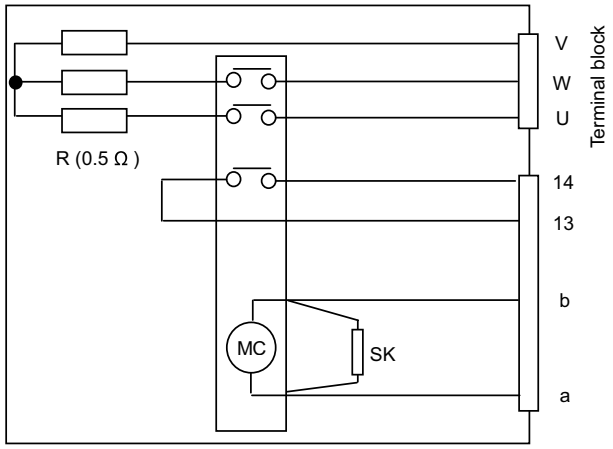
[Unit: mm]



(3) Connecting with the servo drive unit



Internal circuit diagram



⚠ CAUTION

Correctly wire the dynamic brake unit to the servo drive unit.

Do not use for applications other than emergencies (normal braking, etc.). The internal resistor could heat up, and lead to fires or faults.

POINT

When you use a motor with a brake, please wire (between 1pin and 3pin) for the CN20 connector.

5.1.2 Battery Option (MDS-BAT6V1SET, MDSBTBOX-LR2060)

This battery option may be required to establish absolute position system. Select a battery option from the table below depending on the servo system.

Type	MDS-BAT6V1SET	MDSBTBOX-LR2060
Installation type	Drive unit with battery holder type	Unit and battery integration type
Hazard class	Not applicable	Not applicable
Number of connectable axes	Up to 3 axes	Up to 8 axes
Battery change	Possible	Possible
Appearance	(1) 	(2) 
⚠ CAUTION

1. When transporting lithium batteries with means such as by air transport, measures corresponding to the United Nations Dangerous Goods Regulations must be taken. (Refer to "Appendix 2 Restrictions for Lithium Batteries".)
2. The lithium battery must be transported according to the rules set forth by the International Civil Aviation Organization (ICAO), International Air Transportation Association (IATA), International Maritime Organization (IMO), and United States Department of Transportation (DOT), etc. The packaging methods, correct transportation methods, and special regulations are specified according to the quantity of lithium alloys. The battery unit exported from Mitsubishi is packaged in a container (UN approved part) satisfying the standards set forth in this UN Advisory.
3. To protect the absolute value, do not shut off the servo drive unit control power supply if the battery voltage becomes low (warning 9F).
4. Contact the Service Center when replacing the cell battery.
5. The battery life (backup time) is greatly affected by the working ambient temperature. Generally, if the ambient temperature increases, the backup time and useful life will both decrease.

(1) Cell battery (MDS-BAT6V1SET)

(a) Specifications

Battery option type		Cell battery
		MDS-BAT6V1SET
Battery model name		2CR17335A
Nominal voltage		6V
Nominal capacity		1650mAh
Battery safety	Hazard class	Class9 Not applicable
	Battery shape	Set battery
	Number of batteries used	2
	Lithium alloy content	1.2g
	Mercury content	1ppm or less
Number of connectable axes (Note 3)		Up to 3 axes
Battery continuous backup time		Up to 2 axes: Approx. 10000 hours 3 axes connected: Approx. 6600 hours
Battery useful life (From date of unit manufacture)		5 years
Data save time in battery replacement		Approx. 20 hours at time of delivery, approx. 10 hours after 5 years
Back up time from battery warning to alarm occurrence (Note 2)		Up to 2 axes: Approx. 100 hours 3 axes connected: Approx. 60 hours
Mass		34g

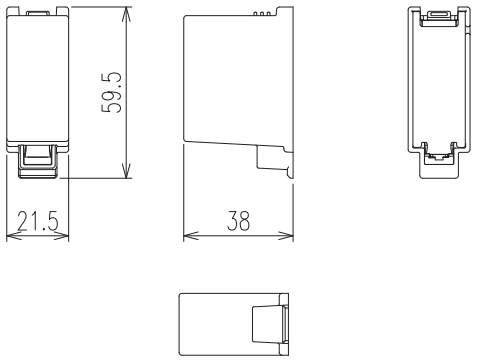
(Note 1) MDS-BAT6V1SET is a battery built in a servo drive unit. Install this battery only in the servo drive unit that executes absolute position control.

(Note 2) This time is a guideline, so does not guarantee the back up time. Replace the battery with a new battery as soon as a battery warning occurs.

(Note 3) When using ball screw side encoder OSA166ET2NA/OSA105ET2A, both ball screw side encoder and motor side encoder need to be backed up by a battery, so the number of load shaft should be two.

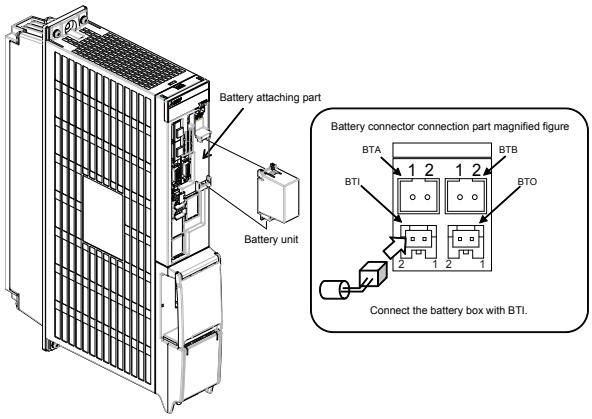
(b) Outline dimension drawings

[Unit: mm]



(c) Installing the cell battery

Connect the connector for the cell battery and install the battery case body to the upper front part of the servo drive unit.



(2) Battery box (MDSBTBOX-LR2060)

(a) Specifications

Battery option type	Battery box
	MDSBTBOX-LR2060
Battery model name (Note 1)	Size-D alkaline batteries LR20 × 4 pieces
Nominal voltage	6.0V (Unit output: BTO1/2/3) 3.6V (Unit output: BT(3.6V)) 1.5V (Isolated battery)
Number of connectable axes	Up to 8 axes
Battery continuous backup time (Note 2)	Approx. 10000 hours (when 8 axes are connected, cumulative time in non-energized state)
Back up time from battery warning to alarm occurrence (Note 2)	Approx. 336 hours (when 8 axes are connected)

(Note 1) Install commercially-available alkaline dry batteries into MDSBTBOX-LR2060. The batteries should be procured by customers. Make sure to use new batteries that have not passed the expiration date. We recommend you to replace the batteries in the one-year cycle.

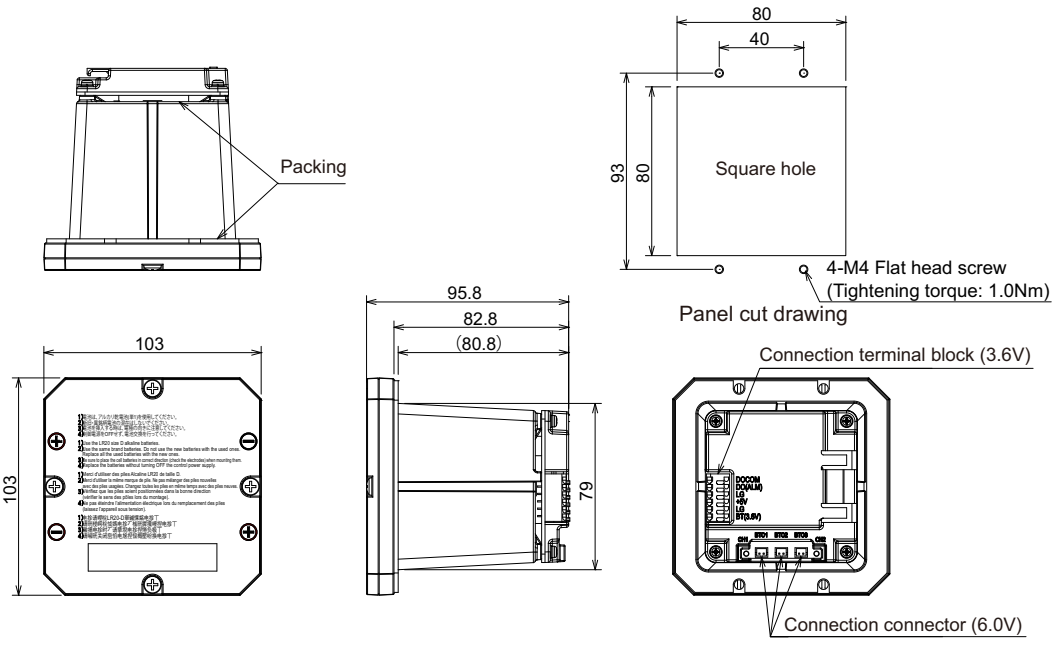
(Note 2) This time is a guideline, so does not guarantee the back up time. Replace the battery with a new battery as soon as a battery warning (9F) occurs.

(b) Explanation of connectors (BTO1/2/3)

		Name	Description
(1)	Power supply output for absolute position encoder backup	BT	6V output for absolute position encoder backup
(2)		LG	Ground

(c) Outline dimension drawings

[Unit: mm]



POINT

As soon as the battery warning (9F) has occurred, replace the batteries with new ones.
Make sure to use new batteries that have not passed the expiration date. We recommend you to replace the batteries in the one-year cycle.

⚠ CAUTION

When installing the battery box on the panel, it may be damaged if the screw is tightened too much. Make sure the tightening torque of the screw.

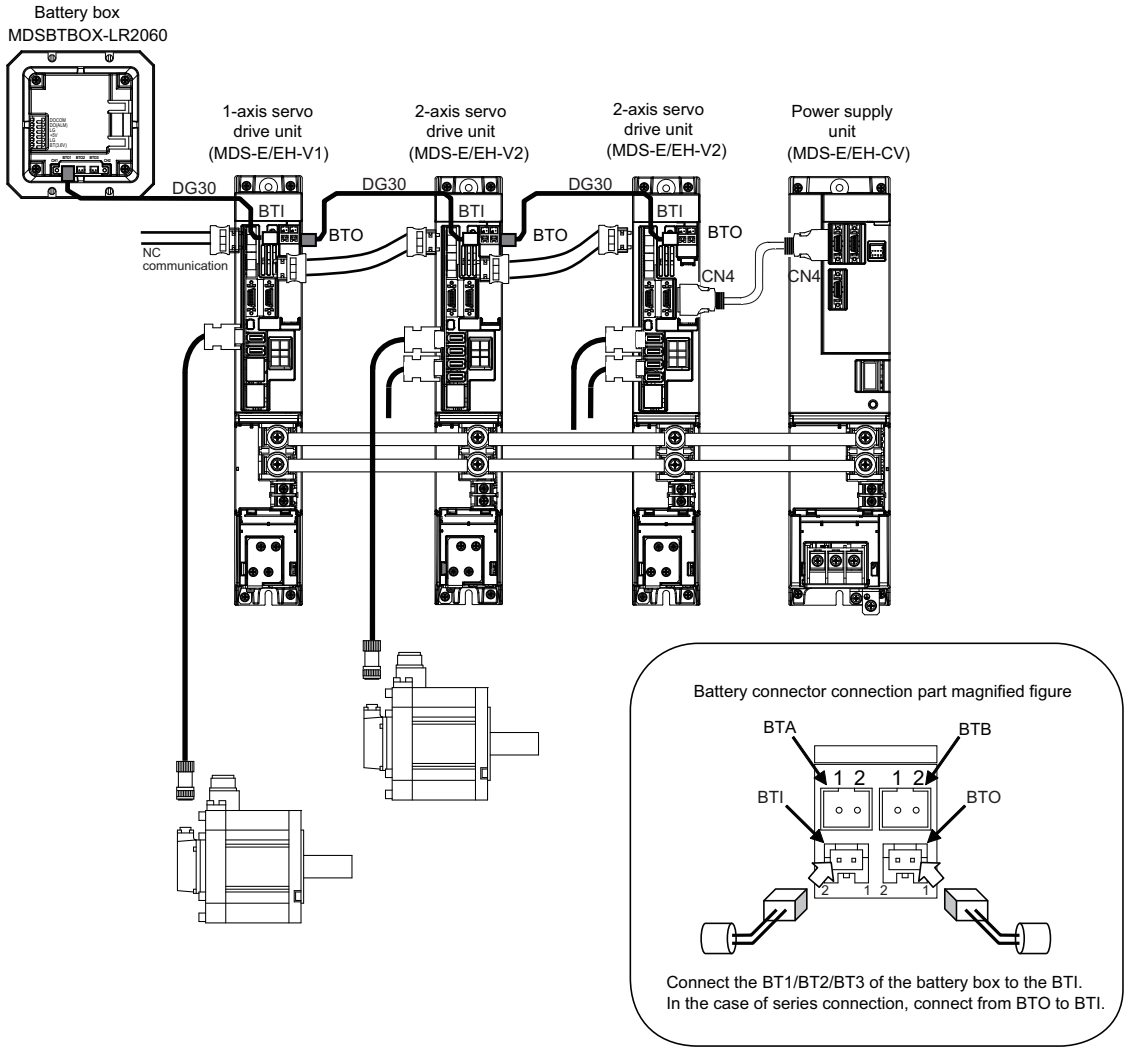
(d) When backing up for more than 8 axes

Add a MDSBTBOX-LR2060 so that the number of connectable axes for a battery unit is 8 axes or less.
For all of servo drive units supported by one MDSBTBOX-LR2060, start the control powers ON simultaneously.

⚠ CAUTION

1. The drive unit which is connected to the battery box and cell battery cannot be used together.
2. Replace the batteries with new ones without turning the control power of the drive unit OFF immediately after the battery voltage drop alarm (9F) has been detected.
3. Replace the batteries while applying the control power of all drive units which are connected to the battery box.
4. Battery voltage drop warning (9F) is released after replacing the battery.

(e) System configuration



⚠ CAUTION

The total length of battery cable (from the battery unit to the last connected drive unit) must be 30m or less.

5.1.3 Ball Screw Side Encoder (OSA405ET2AS, OSA676ET2AS)

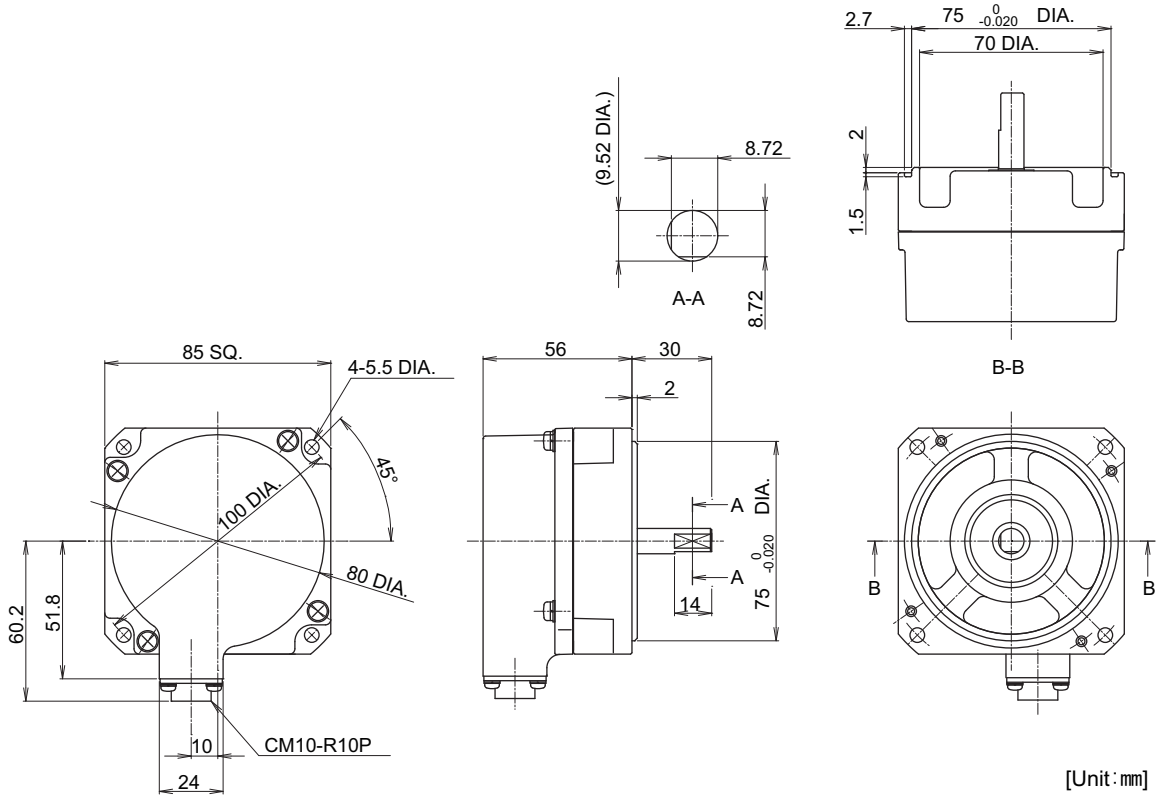
(1) Specifications

Encoder type		OSA405ET2AS	OSA676ET2AS
Electrical characteristics	Encoder resolution	4,194,304 pulse/rev	67,108,864 pulse/rev
	Detection method	Absolute position method (battery backup method)	
	Accuracy (*1)	±3 seconds	
	Tolerable rotation speed at power off (*2)	500r/min	
	Encoder output data	Serial data	
	Power consumption	0.3A	
Mechanical characteristics for rotation	Inertia	$0.5 \times 10^{-4} kgm^2$ or less	
	Shaft friction torque	0.1Nm or less	
	Shaft angle acceleration	$4 \times 10^4 rad/s^2$ or less	
	Tolerable continuous rotation speed	4000r/min	
Mechanical configuration	Shaft amplitude (position 15mm from end)	0.02mm or less	
	Tolerable load (thrust direction/radial direction)	9.8N/19.6N	
	Mass	0.6kg	
	Degree of protection	IP67 (The shaft-through portion is excluded.)	
	Recommended coupling	bellows coupling	
Working environment	Ambient temperature	0°C to +55°C	
	Storage temperature	-20°C to +85°C	
	Humidity	95%Ph	
	Vibration resistance	5 to 50Hz, total vibration width 1.5mm, each shaft for 30min	
	Impact resistance	$490 m/s^2$ (50G)	

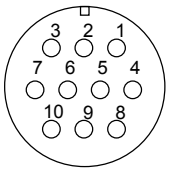
(*1) The values above are typical values after the calibration with our shipping test device and are not guaranteed.

(*2) If the tolerable rotation speed at power off is exceeded, the absolute position cannot be repaired.

(2) Outline dimension drawings
OSA405ET2AS / OSA676ET2AS



(3) Explanation of connectors



Connector pin layout

Pin	Function	Pin	Function
1	RQ	**6**	SD
2	RQ*	**7**	SD*
3	-	**8**	P5(+5V)
4	BAT	**9**	-
5	LG(GND)	**10**	SHD

5.1.4 Machine Side Encoder

(1) Relative position encoder

Depending on the output signal specifications, select a machine side relative position encoder with which the following (a), (b) or (c) is applied.

(a) Serial signal type (serial conversion unit made by each manufacture)

The following serial conversion unit converts the encoder output signal and transmits the signal to the drive unit in serial communication.

For details on the specifications of each conversion unit scale and for purchase, contact each corresponding manufacture directly.

Manufacturer	Encoder type	Interface unit type	Minimum detection resolution	Tolerable maximum speed
Magnescale Co., Ltd	SR67A SR75 SR85	Not required	0.1μm	200m/min
			0.05μm	
			0.01μm	
HEIDENHAIN CORPORATION	LS187, LS187C LS487, LS487C	EIB192M A4 20μm	0.0012μm	120m/min
		EIB392M A4 20μm		
	ERM280 1200	EIB192M C4 1200	0.0000183° (19,660,800p/rev)	20000r/min
		EIB392M C4 1200		
	ERM280 2048	EIB192M C6 2048	0.0000107° (33,554,432p/rev)	11718r/min
		EIB392M C6 2048		

< Contact information about machine side encoder >

- Magnescale Co., Ltd.: http://www.mgscale.com/mgs/language/english/
- HEIDENHAIN CORPORATION: http://www.heidenhain.com/

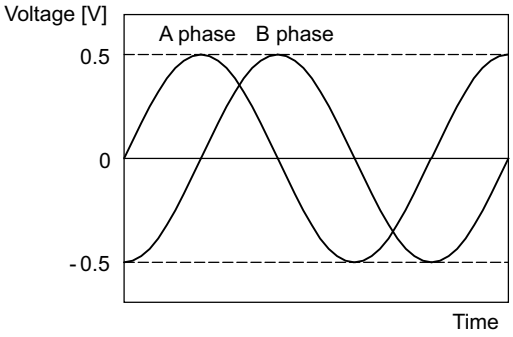
> **⚠ CAUTION**
>
> The above value does not guarantee the accuracy of the system.

(b) SIN wave output (using MDS-B-HR)

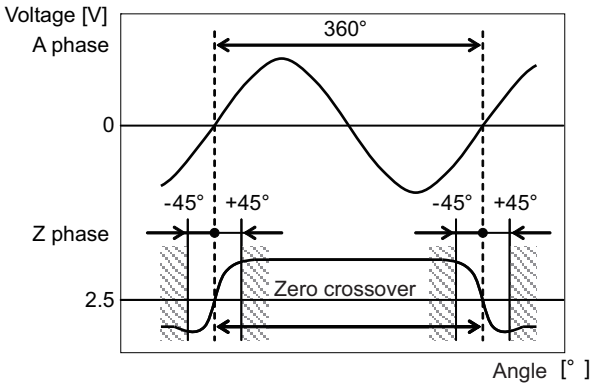
When using a relative position encoder that the signal is the SIN wave output, the encoder output signal is converted in the encoder conversion unit (MDS-B-HR), and then the signal is transmitted to the drive unit in the serial communication. Select a relative position encoder with A/B phase SIN wave signal that satisfies the following conditions. For details on the specifications of MDS-B-HR, refer to the section "MDS-B-HR".

< Encoder output signal >

- 1Vp-p analog A-phase, B-phase, Z-phase differential output
- Output signal frequency 200kHz or less



A/B phase output signal waveform during forward run



Relationship between A phase and Z phase
(When the differential output waveform is measured)

- Combination speed / rotation speed
  - In use of linear scale:
  - Maximum speed (m/min) = scale analog signal frequency (m) × 200,000 × 60
  - In use of rotary encoder:
  - Maximum rotation speed (r/min) = 200,000 / numbers of encoder scale (1/rev) × 60
  - An actual Maximum speed/ rotary speed is limited by the mechanical specifications and electrical specifications, etc. of the connected scale, so contact the manufacture of the purchased scale.
- Division number 512 divisions per 1 cycle of signal
  - In use of linear scale:
  - Minimum resolution (m) = scale analog signal frequency (m) / 512
  - In use of rotary encoder:
  - Minimum resolution (pulse/rev) = numbers of encoder scale (1/rev) × 512

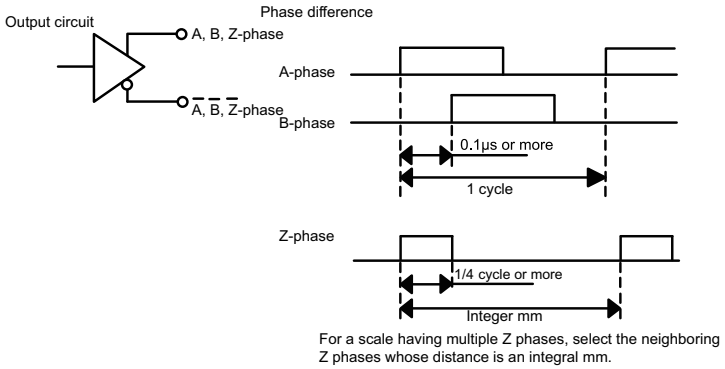
⚠ CAUTION

The above value does not guarantee the accuracy of the system.

(c) Rectangular wave output

Select a relative position encoder with an A/B phase difference and Z-phase width at the maximum feedrate that satisfies the following conditions.

Use an A, B, Z-phase signal type with differential output (RS-422 standard product) for the output signal.



(Note) The above value is minimum value that can be received normally in the servo drive unit side.
In an actual selection, ensure margin of 20% or more in consideration of degradation of electrical wave and speed overshoot.

< Example of scale specifications >

The example of using representative rectangular wave scale is shown below.
For specifications of each conversion unit and scale and for purchase, Contact each corresponding manufacture directly.

Manufacturer	Encoder type	Interface unit type	Minimum detection resolution	Tolerable maximum speed
Magnescale Co., Ltd	SR67A SR74 SR84	Not required	1.0µm	180m/min
			0.5µm	125m/min
			0.1µm	25m/min
			0.05µm	12m/min
HEIDENHAIN CORPORATION	LS187 LS487	IBV 101 (10 divisions)	0.5µm	120m/min
		IBV 102 (100divisions)	0.05µm	24m/min
		IBV 660B (400divisions)	0.0125µm	7.5m/min

< Contact information about machine side encoder >

- Magnescale Co., Ltd: http://www.mgscale.com/mgs/language/english/
- HEIDENHAIN CORPORATION: http://www.heidenhain.com/

(2) Absolute position encoder

The applicable absolute position encoders are as follows.

Manufacturer	Encoder type	Interface unit type	Minimum detection resolution	Tolerable maximum speed
Mitsubishi Electric Corporation	MBA405W Series	(Provided)	0.00009° (4,000,000p/rev)	3000r/min
Magnescale	SR67A SR77 SR87	Not required	0.1μm	200m/min
			0.05μm	
			0.01μm	
	RU77	Not required	0.0000429° (8,388,608p/rev)	2,000r/min
			0.0000107 (33,554,432p/rev)	2,000r/min
HEIDENHAIN CORPORATION	LC193M LC493M	Not required	0.05μm	180m/min
			0.01μm	
	LC195M LC495M	Not required	0.01μm	180m/min
			0.001μm	
	LC291M	Not required	0.01μm	180m/min
	RCN223M	Not required	0.0000429° (8,388,608p/rev)	1,500r/min
	RCN227M	Not required	0.0000027° (134,217,728p/rev)	1,500r/min
	RCN727M RCN827M	Not required	0.0000027° (134,217,728p/rev)	300r/min
Mitutoyo Corporation	AT343	Not required	0.05μm	120m/min

⚠ CAUTION

1. Confirm the specifications of each encoder manufacturer before using machine side encoders made by other manufacturers.
2. Refer to "Twin-head Magnetic Encoder (MBA Series)" for details of the specifications of MBA405W.

5.1.5 Twin-head Magnetic Encoder (MBA Series)

(1) Type description

MBA405W-B (1) (2)

(1)

Symbol	Drum outer diameter
E	Φ100 mm
F	Φ150.3 mm
G	Φ200.6 mm

(2)

Symbol	Drum inner diameter
082	Φ82 mm
125	Φ125 mm
160	Φ160 mm

(2) Specifications

Encoder type		MBA405W-BE082	MBA405W-BF125	MBA405W-BG160
Electrical characteristics	Encoder resolution	4,000,000p/rev		
	Detection method	Absolute position method (battery backup method)		
	Accuracy (*1) (*2)	±4 seconds	±3 seconds	±2 seconds
	Wave number within one rotation	512 waves	768 waves	1024 waves
	Encoder output data	Serial data		
	Power consumption	0.2A or less		
Mechanical characteristics for rotation	Inertia	0.5×10^{-3}kg·m^2	2.4×10^{-3}kg·m^2	8.7×10^{-3}kg·m^2
	Tolerable continuous rotation speed	3000r/min	2000r/min	1500r/min
Mechanical configuration	Drum inner diameter	Φ82mm	Φ125mm	Φ160mm
	Drum outer diameter	Φ100mm	Φ150.3mm	Φ200.6mm
	Drum mass	0.2kg	0.46kg	1.0kg
	Degree of protection (*3)	IP67		
Working environment	Ambient temperature range	0°C to +55°C		
	Storage temperature range	-20°C to +85°C		
	Humidity	95%RH		
	Vibration resistance	Horizontal direction to the axis: 5G or less, Vertical direction to the axis: 5G or less		
	Impact resistance	490m/s^2 (50G)		

(*1) The values above are typical values after the calibration with our shipping test device and are not guaranteed.

(*2) The user is requested to install the magnetic drum and installation ring in the encoder within the accuracy range specified herein. Even when the accuracy of the encoder when shipped and when installed by the user is both within the specified range, there is a difference in the installation position. Therefore, the accuracy at the time of our shipment may not be acquired.

(*3) It is the degree of protection when fitted with a connector.

(3) Specifications of preamplifier

Item	Specified value
Output communication style	High-speed serial communication I/F
Working ambient temperature	0°C to +55°C
Working ambient humidity	90%RH or less (with no dew condensation)
Atmosphere	No toxic gases
Tolerable vibration	Horizontal direction to the axis: 5G or less, Vertical direction to the axis: 5G or less
Tolerable impact	490m/s^2 (50G)
Tolerable power voltage	DC5V±10%
Mass	0.33kg
Degree of protection (*2)	IP67

(*1) The values above are the specified values for the preamplifier provided with a twin-head magnetic encoder.

(*2) It is the degree of protection when fitted with a connector.

5.2 Spindle Options

According to the spindle control to be adopted, select the spindle side encoder based on the following table.

(1) No-variable speed control
(When spindle and motor are directly coupled or coupled with a 1:1 gear ratio)

Spindle control item	Control specifications	Without spindle side encoder	With spindle side encoder
Spindle control	Normal cutting control	●	This normally is not used for no-variable speed control.
	Constant surface speed control (lathe)	●	
	Thread cutting (lathe)	●	
Orientation control	1-point orientation control	●	
	Multi-point orientation control	●	
	Orientation indexing	●	
Synchronous tap control	Standard synchronous tap	●	
	Synchronous tap after zero point return	●	
Spindle synchronous control	Without phase alignment function	●	
	With phase alignment function	●	
C-axis control	C-axis control	● (Note 2)	●

(Note 1) ● : Control possible
x : Control not possible
(Note 2) When spindle and motor are coupled with a 1:1 gear ratio, use of a spindle side encoder is recommended to assure the precision.

(2) Variable speed control
(When using V-belt, or when spindle and motor are connected with a gear ratio other than 1:1)

Spindle control item	Control specifications	Without spindle side encoder	With spindle side encoder		
			TS5690/ERM280/ MPCI/MBE405W Series	OSE-1024	Proximity switch
Spindle control	Normal cutting control	●	●	●	●
	Constant surface speed control (lathe)	● (Note 2)	●	●	● (Note 2)
	Thread cutting (lathe)	x	●	●	x
Orientation control	1-point orientation control	x	●	●	● (Note 4)
	Multi-point orientation control	x	●	●	x
	Orientation indexing	x	●	●	x
Synchronous tap control	Standard synchronous tap	● (Note 3)	●	●	● (Note 3)
	Synchronous tap after zero point return	x	●	●	x
Spindle synchronous control	Without phase alignment function	● (Note 2)	●	●	● (Note 2)
	With phase alignment function	x	●	●	x
C-axis control	C-axis control	x	●	x	x

(Note 1) ● :Control possible
x :Control not possible
(Note 2) Control not possible when connected with the V-belt.
(Note 3) Control not possible when connected with other than the gears.
(Note 4) Orientation is carried out after the spindle is stopped when a proximity switch is used.
As for 2-axis spindle drive unit, setting is available only for one of the axes.

(3) Cautions for connecting the spindle end with an OSE-1024 encoder
[1] Confirm that the gear ratio (pulley ratio) of the spindle end to the encoder is 1:1.
[2] Use a timing belt when connecting by a belt.

5.2.1 Spindle Side ABZ Pulse Output Encoder (OSE-1024 Series)

When a spindle and motor are connected with a V-belt, or connected with a gear ratio other than 1:1, use this spindle side encoder to detect the position and speed of the spindle. Also use this encoder when orientation control and synchronous tap control, etc are executed under the above conditions.

(1) Specifications

Encoder type		OSE-1024-3-15-68	OSE-1024-3-15-68-8
Mechanical characteristics for rotation	Inertia	$0.1x10^{-4}kgm^2$ or less	$0.1x10^{-4}kgm^2$ or less
	Shaft friction torque	0.98Nm or less	0.98Nm or less
	Shaft angle acceleration	$10^4rad/s^2$ or less	$10^4rad/s^2$ or less
	Tolerable continuous rotation speed	6000 r/min	8000 r/min
Mechanical configuration	Bearing maximum non-lubrication time	20000h/6000r/min	20000h/8000r/min
	Shaft run-out (position 15mm from end)	0.02mm or less	0.02mm or less
	Tolerable load (thrust direction/radial direction)	10kg/20kg Half of value during operation	10kg/20kg Half of value during operation
	Mass	1.5kg	1.5kg
	Degree of protection	IP54	
	Squareness of flange to shaft	0.05mm or less	
	Flange matching eccentricity	0.05mm or less	
Working environment	Ambient temperature range	-5°C to +55°C	
	Storage temperature range	-20°C to +85°C	
	Humidity	95%Ph	
	Vibration resistance	5 to 50Hz, total vibration width 1.5mm, each shaft for 30min.	
	Impact resistance	$294.20m/s^2$ (30G)	

(Note) Confirm that the gear ratio (pulley ratio) of the spindle end to the encoder is 1:1.

(2) Detection signals

Signal name	Number of detection pulses
A, B phase	1024p/rev
Z phase	1p/rev

Connector pin layout

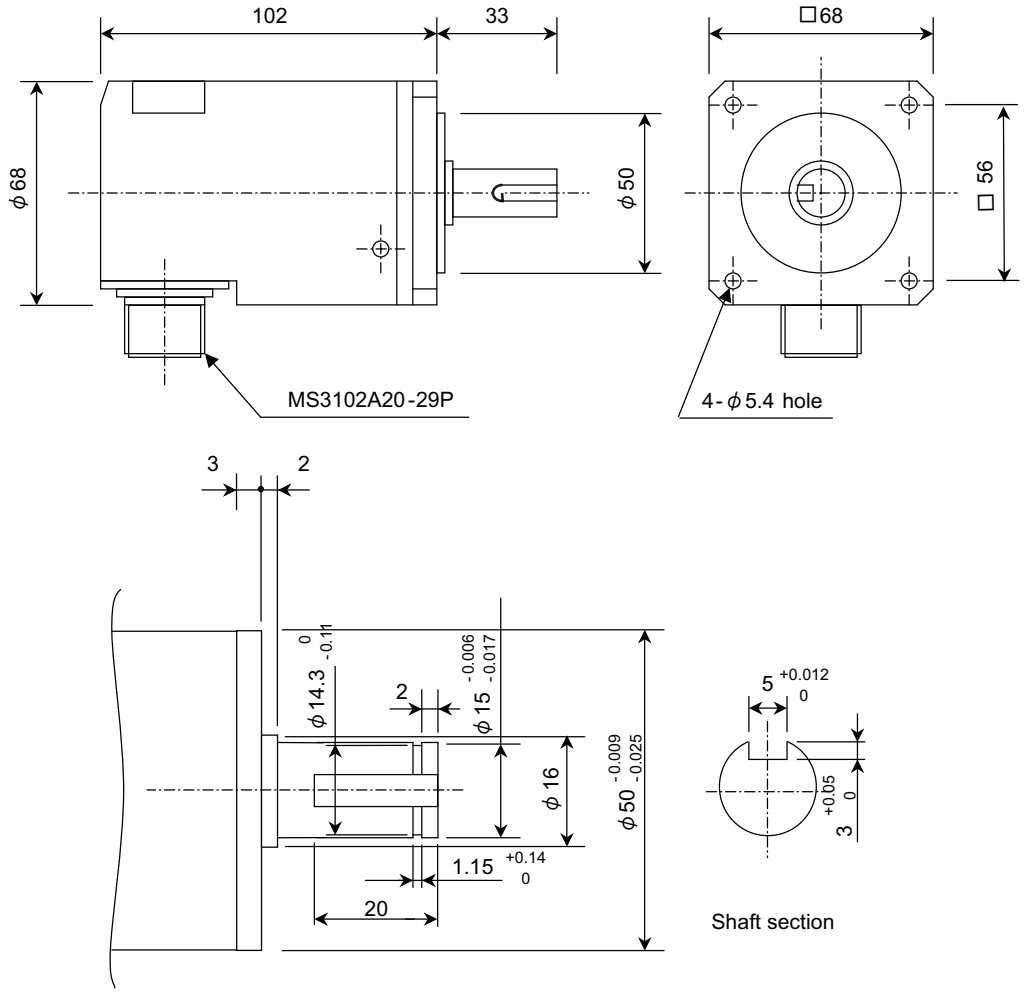
H	+5V	T	-
J	-		

(3) Outline dimension drawings



[Unit: mm]

Spindle side encoder (OSE-1024-3-15-68, OSE-1024-3-15-68-8)

5.2.2 Spindle Side PLG Serial Output Encoder (TS5690, MU1606 Series)

This encoder is used when a more accurate synchronous tapping control or C-axis control than OSE encoder is performed to the spindle which is not directly-connected to the spindle motor.

⚠ CAUTION

1.Selected encoders must be able to tolerate the maximum rotation speed of the spindle.

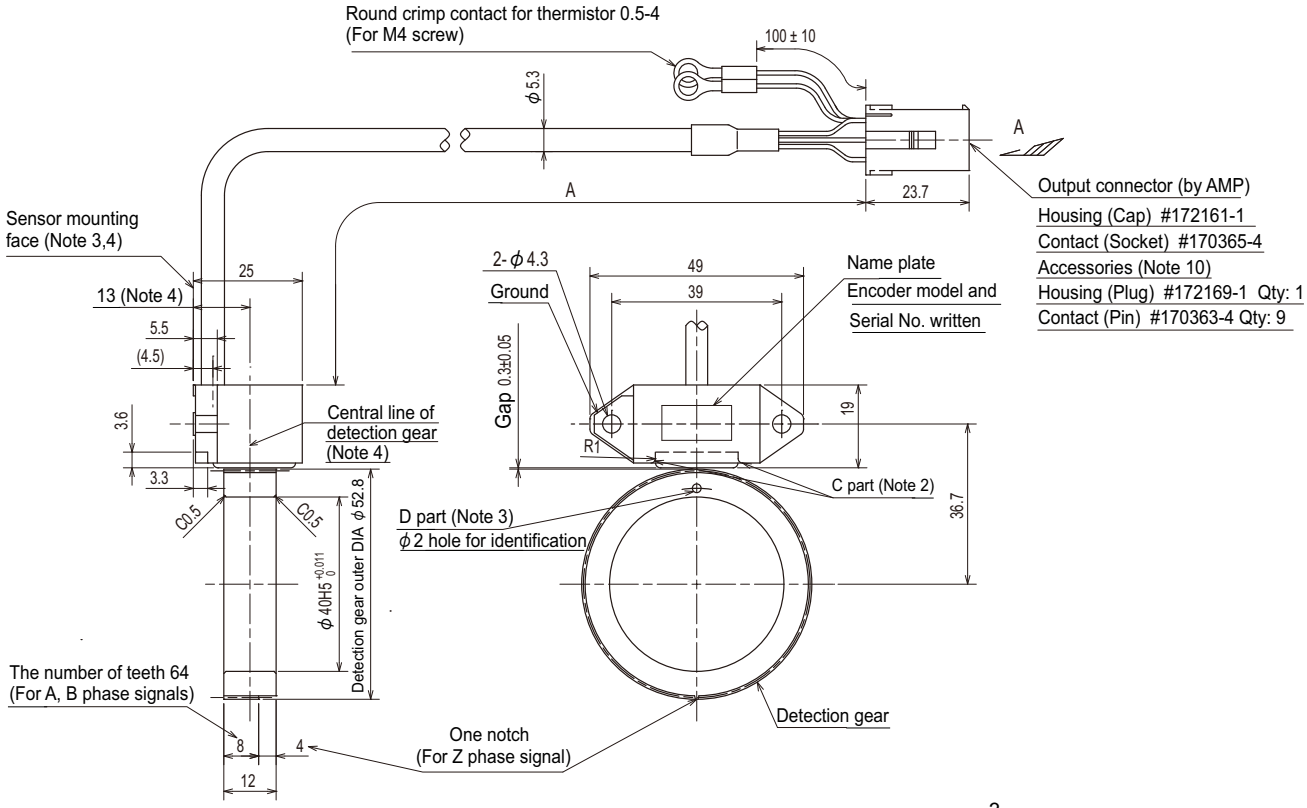
2.Please contact your Mitsubishi Electric dealer for the special products not listed above.

(3) Outline dimension drawings

> **⚠ CAUTION**
>
> Always apply the notched fitting section machining with the specified dimensions to the sensor installation surface.

< TS5690N64x2 + MU1606N601 >

[Unit: mm]



(Note 1) Handle with care as this is a precision component.
Pay special attention not to apply excessive external force on the sensor's detection face. Applying such force will cause a fault.

(Note 2) In installing the sensor, keep the protruding fitting of $\phi 59.4^{-0.030}_{-0.070}$ mm on the machine side, and push the C part of the sensor mounting seat against the fitting.

(Note 3) In installing the detection gear, make sure that the D part side comes the opposite side of the sensor installation side (sensor's lead wire side).

(Note 4) The deviation of the center of the detection gear is 13±0.25mm from the sensor mounting face.

(Note 5) Install in the place where water, oil, etc. do not contact the sensor and cable section.

(Note 6) Do not bend the cable, as this could result in the separation or crack of potting on the root section of the sensor and cable.

(Note 7) Make sure that the minimum bend radius of the cable is more than four times of the cable outer diameter.

(Note 8) Make sure that force is not constantly applied on the sensor or cable.

(Note 9) Fix the output connector at the machine structure section so that the connector will not vibrate.

(Note 10) A connector of the signal cable side (one plug and nine pins) is attached.

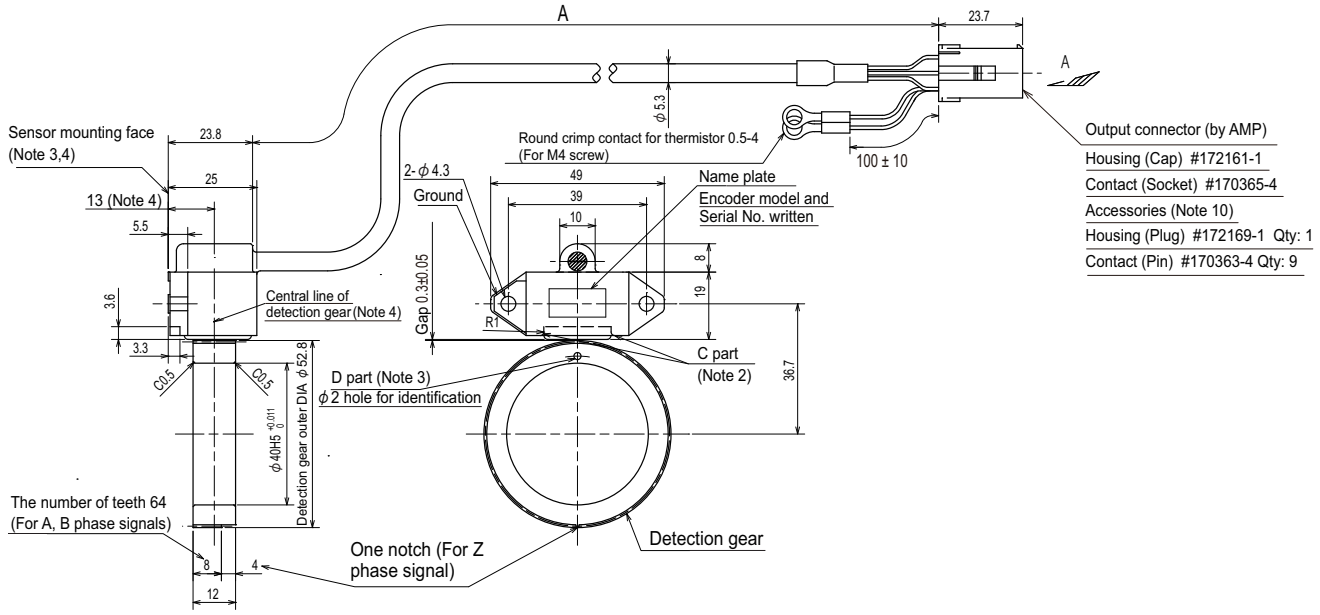
[Unit: mm]



(Note 1) Handle with care as this is a precision component.
Pay special attention not to apply excessive external force on the sensor's detection face. Applying such force will cause a fault.
(Note 2) In installing the sensor, keep the protruding fitting of $\phi 108.8^{+0.025}_{+0.015}$ mm on the machine side, and push the C part of the sensor mounting seat against the fitting.
(Note 3) In installing the detection gear, make sure that the D part side comes the opposite side of the sensor installation side (sensor's lead wire side).
(Note 4) The deviation of the center of the detection gear is 13±0.25mm from the sensor mounting face.
(Note 5) Install in the place where water, oil, etc. do not contact the sensor and cable section.
(Note 6) Do not bend the cable, as this could result in the separation or crack of potting on the root section of the sensor and cable.
(Note 7) Make sure that the minimum bend radius of the cable is more than four times of the cable outer diameter.
(Note 8) Make sure that force is not constantly applied on the sensor or cable.
(Note 9) Fix the output connector at the machine structure section so that the connector will not vibrate.
(Note 10) A connector of the signal cable side (one plug and nine pins) is attached.

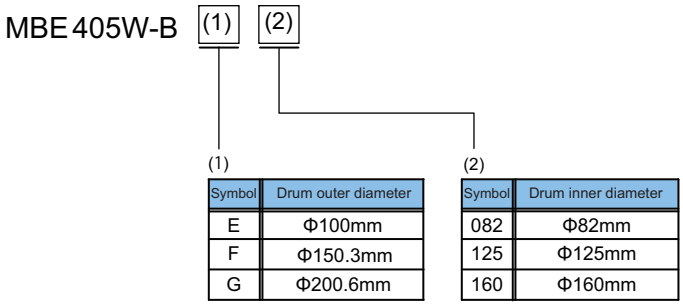
5.2.3 Twin-head Magnetic Encoder (MBE Series)

(1) Type description



(1)

Symbol	Drum outer diameter
E	Φ100mm
F	Φ150.3mm
G	Φ200.6mm

(2)

Symbol	Drum inner diameter
082	Φ82mm
125	Φ125mm
160	Φ160mm

(2) Specifications

Encoder type		MBE405W-BE082	MBE405W-BF125	MBE405W-BG160
Electrical characteristics	Encoder resolution	4,000,000p/rev		
	Detection method	Incremental		
	Accuracy (*1) (*2)	±4 seconds	±3 seconds	±2 seconds
	Wave number within one rotation	512 waves	768 waves	1024 waves
	Encoder output data	Serial data		
	Power consumption	0.2A or less		
Mechanical characteristics for rotation	Inertia	0.5×10^{-3}kg·m^2	2.4×10^{-3}kg·m^2	8.7×10^{-3}kg·m^2
	Tolerable continuous rotation speed	15000r/min	10000r/min	8000r/min
Mechanical configuration	Drum inner diameter	Φ82mm	Φ125mm	Φ160mm
	Drum outer diameter	Φ100mm	Φ150.3mm	Φ200.6mm
	Drum mass	0.2kg	0.46kg	1.0kg
	Degree of protection (*3)	IP67		
Working environment	Ambient temperature range	0°C to +55°C		
	Storage temperature range	-20°C to +85°C		
	Humidity	95%RH		
	Vibration resistance	Horizontal direction to the axis: 5G or less, Vertical direction to the axis: 5G or less		
	Impact resistance	490m/s^2 (50G)		

(*1) The values above are typical values after the calibration with our shipping test device and are not guaranteed.

(*2) The user is requested to install the magnetic drum and installation ring in the encoder within the accuracy range specified herein. Even when the accuracy of the encoder when shipped and when installed by the user is both within the specified range, there is a difference in the installation position. Therefore, the accuracy at the time of our shipment may not be acquired.

(*3) It is the degree of protection when fitted with a connector.

(3) Specifications of preamplifier

Item	Specified value
Output communication style	High-speed serial communication I/F
Working ambient temperature	0°C to +55°C
Working ambient humidity	90%RH or less (with no dew condensation)
Atmosphere	No toxic gases
Tolerable vibration	Horizontal direction to the axis: 5G or less, Vertical direction to the axis: 5G or less
Tolerable impact	490m/s^2 (50G)
Tolerable power voltage	DC5V±10%
Mass	0.33kg
Degree of protection (*2)	IP67

(*1) The values above are the specified values for the preamplifier provided with a twin-head magnetic encoder.

(*2) It is the degree of protection when fitted with a connector.

5.2.5 Machine Side Encoder

Refer to the section "5.1.4 Machine Side Encoder".

5.3 Encoder Interface Unit

5.3.1 Serial Output Interface Unit for ABZ Analog Encoder MDS-B-HR

This unit superimposes the scale analog output raw waves, and generates high resolution position data. Increasing the encoder resolution is effective for the servo high-gain. MDS-B-HR-12(P) is used for the synchronous control system that 1-scale 2-drive operation is possible.

(1) Type configuration

MDS-B-HR- (1) (2)

(1) Signal division function class

Symbol	Scale output voltage class
11	Output number 1
12	Output number 2 (with division)

(2) Degree of protection

Symbol	Degree of protection
None	IP65
P	IP67

(2) Specifications

Type MDS-B-HR-	11	12	11P	12P
Compatible scale (example)	LS186 / LS486 / LS186C / LS486C (HEIDENHAIN)			
Signal 2-division function	-	*	-	*
Analog signal input specifications	A-phase, B-phase, Z-phase (Amplitude 1Vp-p)			
Compatible frequency	Analog raw waveform max. 200kHz			
Scale resolution	Analog raw waveform/512 division			
Input/output communication style	High-speed serial communication I/F, RS485 or equivalent			
Working ambient temperature	0 to 55°C			
Working ambient humidity	90%RH or less (with no dew condensation)			
Atmosphere	No toxic gases			
Tolerable vibration	98.0 m/s^2 (10G)			
Tolerable impact	294.0 m/s^2 (30G)			
Tolerable power voltage	5VDC±5%			
Maximum heating value	2W			
Mass	0.5kg or less			
Degree of protection	IP65		IP67	

(3) Explanation of connectors

Connector name	Application	Remarks
CON1	For connection with servo drive unit (2nd system)	Not provided for 1-part system specifications
CON2	For connection with servo drive unit	
CON3	For connection with scale	
CON4	For connection with pole detection unit (MDS-B-MD)	*Used for linear servo system

CON1		CON2		CON3		CON4	
Pin No.	Function	Pin No.	Function	Pin No.	Function	Pin No.	Function
1	RQ+ signal	1	RQ+ signal	1	A+ phase signal	1	A phase signal

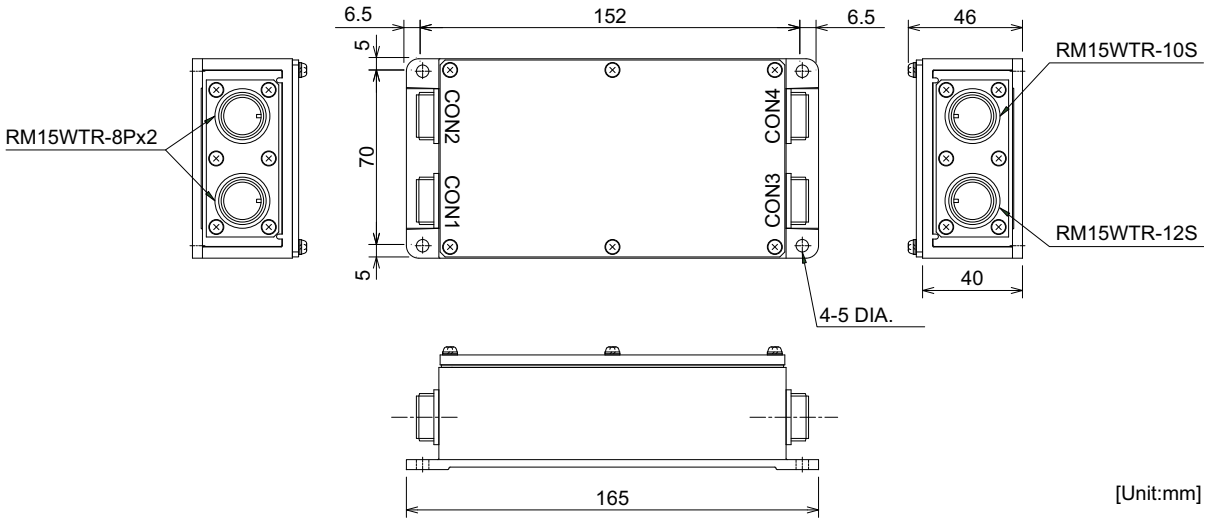
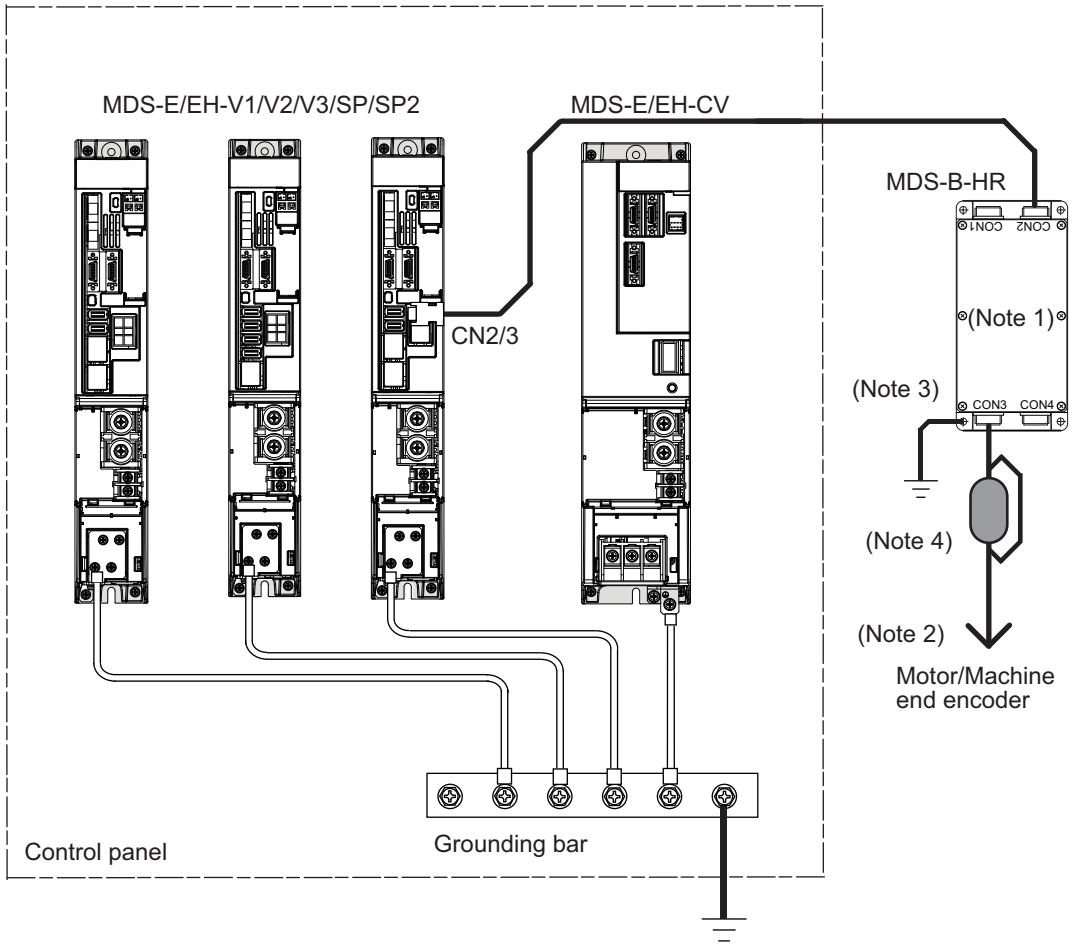
(4) Outline dimension drawings



[Unit:mm]

(5) Example of wiring



(Note 1) Install the MDS-B-HR unit outside the control panel.
(Note 2) For connections between an encoder and MDS-B-HR unit, keep the cable length as short as possible.
(Note 3) Ground the MDS-B-HR unit.
(Note 4) Place a ferrite core as close as possible to the MDS-B-HR unit.
Wind the cable around the unit one time when installing a ferrite core.

5.3.2 Serial Signal Division Unit MDS-B-SD

This unit has a function to divide the position and speed signals fed back from the high-speed serial encoder and high-speed serial linear scale. This unit is used to carry out synchronized control of the motor with two MDS-E/EH-V1 drive units.

(1) Specifications

Type	MDS-B-SD
Compatible servo drive unit	MDS-E/EH-V1- ☐
Input/output communication style	High-speed serial communication I/F, RS485 or equivalent
Working ambient temperature	0 to 55°C
Working ambient humidity	90%RH or less (with no dew condensation)
Atmosphere	No toxic gases
Tolerable vibration	98.0 m/s^2 (10G)
Tolerable impact	294.0 m/s^2 (30G)
Tolerable power voltage	5VDC±10%
Maximum heating value	4W
Mass	0.5kg or less
Degree of protection	IP20

POINT

Always provide one MDS-B-SD unit for one speed command synchronous control operation.

The CN2 system's CN2A and the CN3 system's CN3A cannot be connected to different servo drive units.

(2) Explanation of connectors

Encoder connector : CN2			
Pin No.	Name	Pin No.	Name

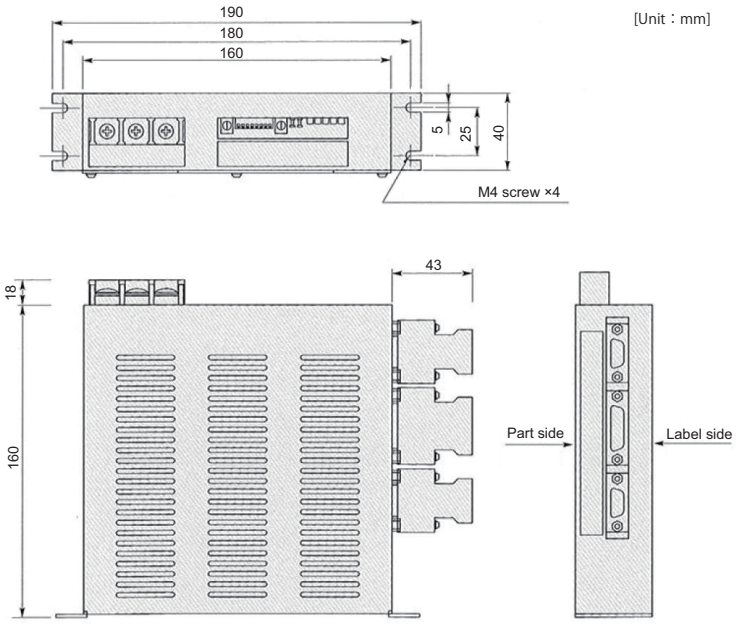
5.3.6 Serial Output Interface Unit for ABZ Analog Encoder ADB-20J Series (Other Manufacturer's Product)

(1) Appearance

(2) Specifications

Type	ADB-20J20	ADB-20J60		ADB-20J71
Manufacturer	Mitsubishi Heavy Industries, Ltd.			
Maximum response speed	10,000r/min	3,600m/min	5,000r/min	10,000r/min
Output signal	Mitsubishi high-speed serial signal			
Compatible encoder	MPCI series	MPS Series	MPI Series	MPRZ series
Minimum detection resolution	0.00005° (7,200,000p/rev)	0.05μm	0.000025° (1,440,000p/rev)	0.000043° (8,388,608p/rev)
Working temperature	0°C to 55°C			
Degree of protection	IP20			
Mass	0.9kg			

(3) Outline dimension drawings



> **⚠ CAUTION**
>
> These are other manufacturer's products. When purchasing these products, refer to the manufacturer's information materials for the product specifications.

5.4 Drive Unit Option

5.4.1 DC Connection Bar

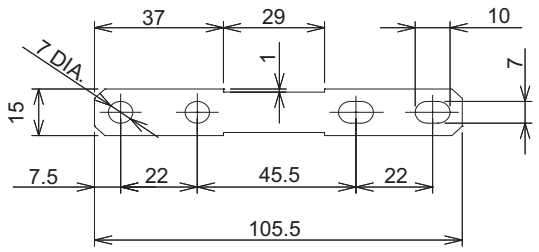
When connecting a large capacity drive unit with L+L- terminal of power supply unit, DC connection bar is required. In use of the following large capacity drive units, use a dedicated DC connection bar. The DC connection bar to be used depends on the connected power supply, so make a selection according to the following table.

Series	Large capacity drive unit	Power supply unit	Required connection bar
MDS-E	MDS-E-SP-400 MDS-E-SP-640	MDS-E-CV-300 MDS-E-CV-370 MDS-E-CV-450	E-BAR-B0606
	MDS-E-SP-400 MDS-E-SP-640	MDS-E-CV-550	E-BAR-A0606 (Two-parts set)
MDS-EH	MDS-EH-SP-200 MDS-EH-SP-320 MDS-EH-SP-480	MDS-EH-CV-550 MDS-EH-CV-750	E-BAR-A0606 (Two-parts set)
	MDS-EH-V1-200 MDS-EH-SP-200 MDS-EH-SP-320	MDS-EH-CV-300 MDS-EH-CV-370 MDS-EH-CV-450	DH-BAR-B0606
	MDS-EH-V1-200	MDS-EH-CV-185	DH-BAR-C0606

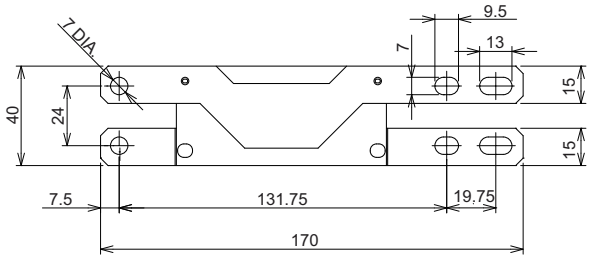
(1) Outline dimension drawings

[Unit:mm]

E-BAR-A0606

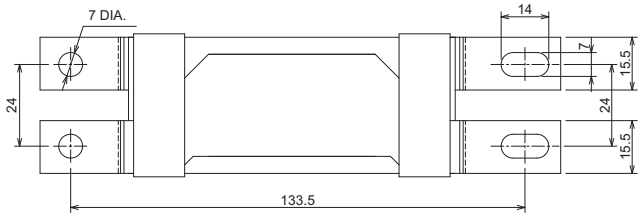


E-BAR-B0606

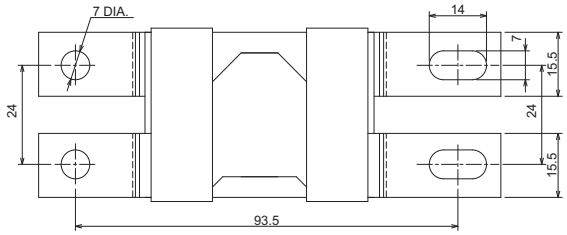


(Note) E-BAR-A0606 is a set of two DC connection bars.

DH-BAR-B0606



DH-BAR-C0606



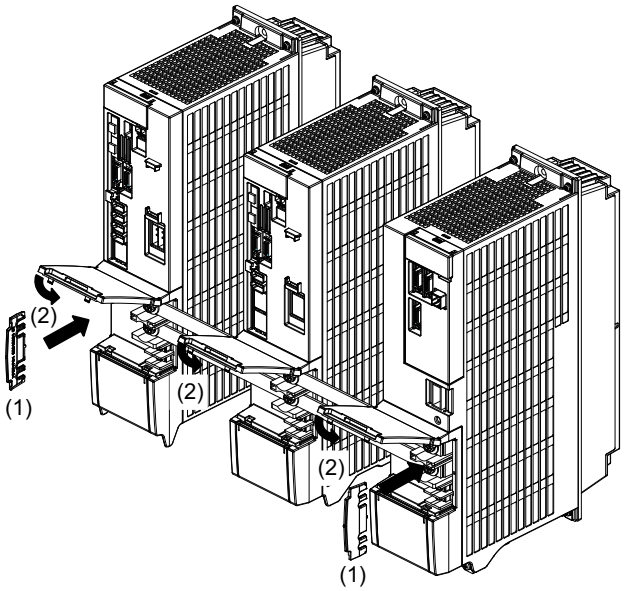
POINT

Always install a large capacity drive unit in the left side of power supply unit, and connect with DC connection bar.

5.4.2 Side Protection Cover

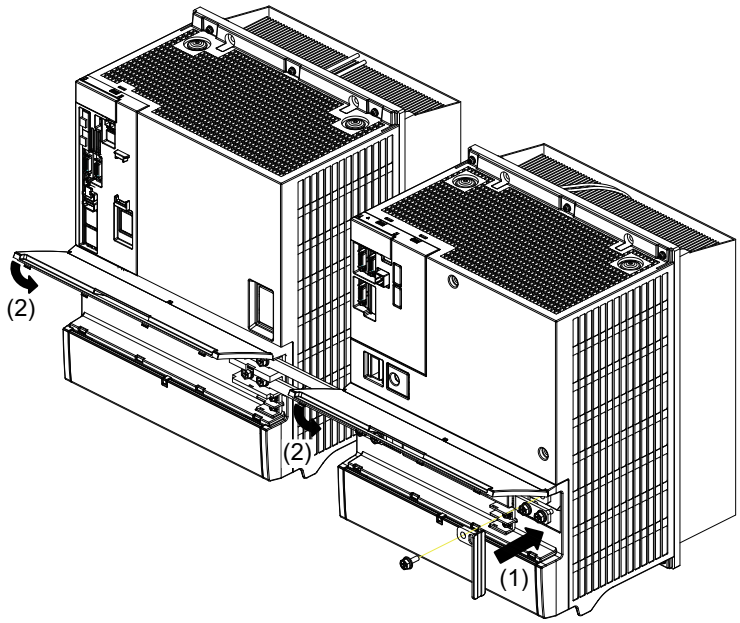
Install the side protection cover outside the both ends of the connected units.

(Installation method 1): Installation of medium capacity unit



(1): Install the side protection cover (type: E-COVER-1).
(2): Close the front cover.

(Installation method 2): Installation of large capacity unit



(1): Install the side protection cover (type: E-COVER-2).
(2): Close the front cover.

5.4.3 Power Backup Unit (MDS-D/DH-PFU)

MDS-D/DH-PFU unit is a system to protect the machine and the drive units safely by decelerating and stopping the motor at power failure. There are two unit types of 200V specification and 400V specification in accordance with the NC servo and spindle system.

(1) Type configuration

MDS- (1) -PFU

(1)

Symbol	Voltage class
D	200V
DH	400V

(2) Specifications

Model Name		MDS-D-PFU	MDS-DH-PFU
AC Input	Rated voltage [V]	200 to 230AC (50/60Hz) Tolerable fluctuation : between +10% and -15%	380 to 480AC (50/60Hz) (Exclusively for earthed-star supply system) Tolerable fluctuation : between +10% and -10%
	Frequency [Hz]	50/60 Tolerable fluctuation : between +3% and -3%	
	Rated current [A]	4	2
DC Input and output	Rated voltage [V]	270 to 311DC	513 to 648DC
	Rated current [A]	Regenerating Input: MAX 300A Powering Output: MAX 200A	Regenerating Input: MAX 200A Powering Output: MAX 160A
AC output for control power supply backup	Voltage [V]	Single phase 200 to 230VAC (50Hz or 60Hz) 50Hz at backup	Single phase 380 to 480VAC (50Hz or 60Hz) 50Hz at backup
	Current [A]	MAX 4	MAX 2
	Maximum number of connectable drive units	6 (excluding power supply units)	
	Changeover time	100ms or less after instantaneous interruption of AC input	
	Minimum backup time	75ms or longer (When 200VAC is input and the maximum number of connectable drive units is connected)	75ms or longer (When 380VAC is input and the maximum number of connectable drive units is connected)
Degree of protection		IP20 (Except for Terminal block and Connector)	
Environment	Ambient temperature	Operation: 0 to 55°C (with no freezing) Storage / Transportation: -15°C to 70°C (with no freezing)	
	Ambient humidity	Operation / Storage / Transportation: 90%RH or less (with no dew condensation)	
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles	
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 13000 meters or less above sea level	
	Vibration	Operation / Storage: 4.9m/s^2 (0.5G) or less	
Cooling method		Natural air cooling	
Mass [kg]		4	
Noise		Less than 55dB	

(3) Outline dimension drawings

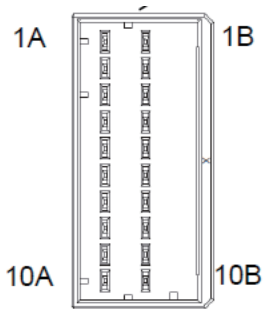
(5) Explanation of connectors

< CN43 connector >



No.	Signal name	Function	Description
1B	24VOUT	Internal 24V output	Internal 24V output. This enables connection to the 24V input power supply for DO. (Note that the DO output current should be 100mA or less.)
2B	DO_COM	DO common terminal	Common terminal for DO output circuit
5B	DO2	Tool escape request	ON:Normal, OFF: Tool escape request
10B	THM1	Thermal error detection	Shorted: Normal, Open: Error detection
1A	24GOUT	Internal 24V output GND	
2A	DO_COM2	DO common terminal 2	
3A	DO_COM2	DO common terminal 2	
10A	THM2(24GOUT)	Thermal error detection	GND for internal 24V input

5.4.4 Regenerative Resistors for Power Backup Unit (R-UNIT-6,7)

Check the availability of connection of the power backup unit and the regenerative resistor for the power backup unit.
The regenerative resistor generates heats, so wire and install the unit while taking care to safety.

(1) Specifications

Model Name		R-UNIT-7	R-UNIT-6
Compatible power backup unit name		MDS-D-PFU	MDS-DH-PFU
Resistance value [Ω]		1.4	5
Instantaneous regeneration capacity [kW]		114	128
Allowable regeneration workload [kJ]		180	180
Environment	Ambient temperature	Operation: 0 to 55°C (with no freezing) Storage / Transportation: -15°C to 70°C (with no freezing)	
	Ambient humidity	Operation / Storage / Transportation: 90%RH or less (with no dew condensation)	
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles	
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 13000 meters or less above sea level	
	Vibration	Operation / Storage: 4.9m/s^2 (0.5G) or less	
Cooling method		Natural air cooling	
Mass [kg]		10	

⚠ CAUTION

1. Only the designated combination can be used for the power backup unit and the regenerative resistor for the power backup unit.
   There is a risk of fire, so always use the designated combination.
2. Select the function selection rotary switch (SW1) of the power backup unit according to the regenerative resistor for the power backup unit to be used.

(2) Outline dimension drawings

< R-UNIT-6 / R-UNIT-7 >

[Unit : mm]

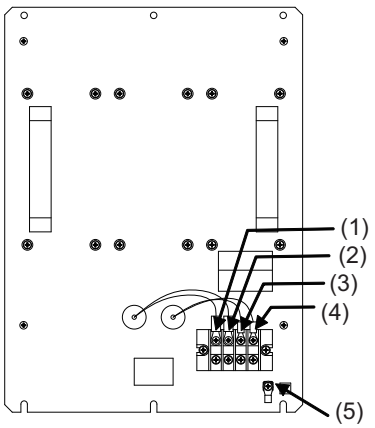
< R-UNIT-6 / R-UNIT-7 >



Name		Function	Compatible wire	Terminal specification
(1)	R1	PFU connection terminal	AWG10 (5.5 mm^2)	M4 screw Compatible crimp terminal: Round: Up to 5.5-4
(2)	R2			
(3)	AL1	Thermal connection output terminal	AWG#18 to AWG#24 (0.75mm^2 to 0.2mm^2)	M4 screw Compatible crimp terminal: Round: Up to 1.25-4
(4)	AL2			
(5)	E	Grounding terminal	AWG10 (5.5 mm^2)	M4 screw Compatible crimp terminal: Round: Up to 5.5-4

5.4.5 Capacitor Unit for Power Backup Unit (MDS-D/DH-CU)

Check the availability of connection of the power backup unit and the capacitor unit. The powering energy at retraction/ tool escape is supplied to the capacitor unit.

(1) Specifications

Model Name		MDS-D-CU	MDS-DH-CU
Compatible power backup unit name		MDS-D-PFU	MDS-DH-PFU
Capacity [μF]		28000	7000
DC Input and output	Rated voltage [V]	DC270 to 311	DC513 to 648
Environment	Ambient temperature	Operation: 0 to 55°C (with no freezing) Storage / Transportation: -15°C to 70°C (with no freezing)	
	Ambient humidity	Operation / Storage / Transportation: 90%RH or less (with no dew condensation)	
	Atmosphere	Indoors (no direct sunlight) With no corrosive gas, inflammable gas, oil mist, dust or conductive fine particles	
	Altitude	Operation/Storage: 1000 meters or less above sea level, Transportation: 13000 meters or less above sea level	
	Vibration	Operation / Storage: 4.9m/s^2 (0.5G) or less	
Cooling method		Natural air cooling	
Mass [kg]		11	

⚠ CAUTION

1. Only the designated combination can be used for the power backup unit and the capacitor unit.
   There is a risk of fire, so always use the designated combination.
2. Do not reverse the polarity when connecting.
3. When using the retraction/tool escape function, the supported software version for the power backup unit is A1 or later.
4. Select the function setting dip switch (SW2) of the power backup unit according to the capacitor unit to be used.

5.5.3 Optical Communication Cable Specifications

(1) Specifications

Cable model		J396 L ☐ M	J395 L ☐ M	G380 L ☐ M
Specification application		For wiring inside panel	For wiring outside panel	For wiring outside panel For long distance wiring
Cable length		0.3, 0.5, 1.0, 2.0, 3.0, 5.0m	3, 5, 7, 10m	5.0, 10, 12, 15, 20, 25, 30m
Optical communication cable	Minimum bend radius	25mm	Enforced covering cable: 50mm cord: 30mm	
	Tension strength	140N	980N (Enforced covering cable)	
	Temperature range for use (Note1)	-40 to 85°C	-20 to 70°C	
	Ambient	Indoors (no direct sunlight) No solvent or oil		
	Cable appearance [mm]			
	Connector appearance [mm]			

(Note 1) This temperature range for use is the value for optical cable (cord) only. Temperature condition for the connector is the same as that for drive unit.

(Note 2) Do not see directly the light generated from CN1A/CN1B connector of drive unit or the end of cable. When the light gets into eye, you may feel something is wrong for eye.
(The light source of optical communication corresponds to class1 defined in JISC6802 or IEC60825-1.)

(2) Cautions for using optical communication cable

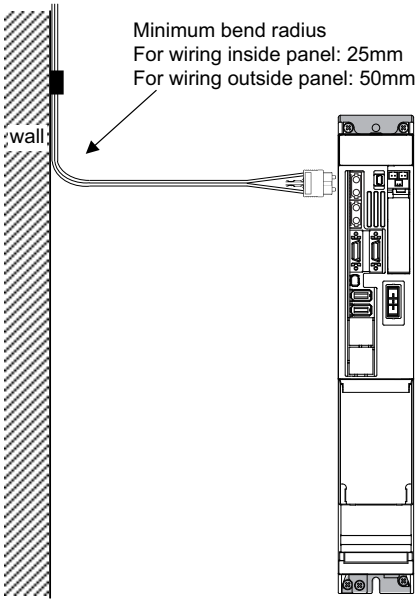
Optical communication cable is made from optical fiber. If optical fiber is added a power such as a major shock, lateral pressure, haul, sudden bending or twist, its inside distorts or breaks, and optical transmission will not be available. Especially, as optical fiber for J396 L □ M is made of synthetic resin, it melts down if being left near the fire or high temperature. Therefore, do not make it touched the part, which becomes high temperature, such as radiator or regenerative brake option of drive unit.
Read described item in this section carefully and handle it with caution.

(a) Minimum bend radius

Make sure to lay the cable with greater radius than the minimum bend radius. Do not press the cable to edges of equipment or others. For the optical communication cable, the appropriate length should be selected with due consideration for the dimensions and arrangement of drive unit so that the cable bend will not become smaller than the minimum bend radius in cable laying. When closing the door of control box, pay careful attention for avoiding the case that optical communication cable is hold down by the door and the cable bend becomes smaller than the minimum bend radius.
Lay the cable so that the numbers of bends will be less than 10 times.

(b) Bundle fixing

When using optical communication cable of 3m or longer, fix the cable at the closest part to the connector with bundle material in order to prevent optical communication cable from putting its own weight on CN1A/CN1B connector of drive unit. Optical cord should be given loose slack to avoid from becoming smaller than the minimum bend radius, and it should not be twisted.
When tightening up the cable with nylon band, the sheath material should not be distorted. Fix the cable with tightening force of 1 to 2kg or less as a guide.



When laying cable, fix and hold it in position with using cushioning such as sponge or rubber which does not contain plasticizing material. If it is fixed by a cable tie and the like without using cushioning, the wire breakage may occur. Never use vinyl tape for cord. Plasticizing material in vinyl tape goes into optical fiber and lowers the optical characteristic. At worst, it may cause wire breakage. If using adhesive tape for cable laying, the fire resistant acetate cloth adhesive tape 570F (Teraoka Seisakusho Co., Ltd) is recommended.
If laying with other wires, do not make the cable touched wires or cables made from material which contains plasticizing material.

(c) Tension

If tension is added on optical fiber, the increase of transmission loss occurs because of external force which concentrates on the fixing part of optical fiber or the connecting part of optical connector. At worst, the breakage of optical fiber or damage of optical connector may occur. For cable laying, handle without putting forced tension.

(d) Lateral pressure

If lateral pressure is added on optical communication cable, the optical cable itself distorts, internal optical fiber gets stressed, and then transmission loss will increase. At worst, the breakage of optical cable may occur. As the same condition also occurs at cable laying, do not tighten up optical communication cable with a thing such as nylon band (TY-RAP).

Do not trample it down or tuck it down with the door of control box or others.

(e) Twisting

If optical fiber is twisted, it will become the same stress added condition as when local lateral pressure or bend is added. Consequently, transmission loss increases, and the breakage of optical fiber may occur at worst.

(f) Cable selection

- When wiring is outside the power distribution panel or machine cabinet, there is a highly possibility that external power is added. Therefore, make sure to use the cable for wiring outside panel (J395 L □ M)
- If a part of the wiring is moved, use the cable for wiring outside panel.
- In a place where sparks may fly and flame may be generated, use the cable for wiring outside panel.

(g) Method to lay cable

When laying the cable, do not haul the optical fiver or connector of the optical communication cable strongly. If strong force is added between the optical fiver and connector, it may lead to a poor connection.

(h) Protection when not in use

When the CN1A/CN1B connector of the drive unite or the optical communication cable connector is not used such as pulling out the optical communication cable from drive unit, protect the joint surface with attached cap or tube for edge protection. If the connector is left with its joint surface bared, it may lead to a poor connection caused by dirty.

(i) Attaching /Detaching optical communication cable connector

With holding the connector body, attach/detach the optical communication cable connector. If attaching/detaching the optical communication cable with directly holding it, the cable may be pulled out, and it may cause a poor connection.

When pulling out the optical communication connector, pull out it after releasing the lock of clock lever.

(j) Cleaning

If CN1A and CN1B connector of the drive unit or optical communication cable connector is dirty, it may cause poor connection. If it becomes dirty, wipe with a bonded textile, etc. Do not use solvent such as alcohol.

(k) Disposal

When incinerating optical communication cable, hydrogen fluoride gas or hydrogen chloride gas which is corrosive and harmful may be generated. For disposal of optical communication cable, request for specialized industrial waste disposal services that has incineration facility for disposing hydrogen fluoride gas or hydrogen chloride gas.

(l) Return in troubles

When asking repair of drive unit for some troubles, make sure to put a cap on CN1A/CN1B connector.

When the connector is not put a cap, the light device may be damaged at the transit. In this case, exchange and repair of light device is required.

6

Specifications of Peripheral Devices

6.1 Selection of Wire

6.1.1 Example of Wires by Unit

Selected wires must be able to tolerate rated current of the unit's terminal to which the wire is connected.
How to calculate tolerable current of an insulated wire or cable is shown in "Tolerable current of electric cable" (1) of Japanese Cable Makers' Association Standard (JCS)-168-E (1995), its electric equipment technical standards or JEAC regulates tolerable current, etc. wire.
When exporting wires, select them according to the related standards of the country or area to export. In the UL standards, certification conditions are to use wires of 60°C and 75°C product. (UL508C)
Wire's tolerable current is different depending on conditions such as its material, structure, ambient temperature, etc. Check the tolerable current described in the specification of the wire to use.
Example of wire selections according to each standard is as follows.

Wire size		Tolerable current	
Conductor（copper）[mm^2]	AWG	60 ℃ (IV wire)	75 ℃ (HIV wire)
2	14	15A	15A
3.5	12	20A	20A
5.5	10	28A	30A
8	8	34A	46A
14	6	50A	65A
22	4	65A	85A
38	2	92A	115A
60	1/0	124A	150A
80	3/0	145A	200A
100	4/0	170A	225A

(Note) The relation between wire size and tolerable current above corresponds to restrictions specified in IEC/EN60204-1,UL508C,JEAC8001.
Wire's tolerable current is different depending on the specifications even for the wires of the same size. Confirm the operating environment and conditions, and wire with the applicable wires.

(1) 600V vinyl insulated wire (IV wire) 60°C product (Example according to IEC/EN60204-1, UL508C)

(Note) The values inside of ( ) are M side.

Unit type		Terminal name					
		TE1 (U, V, W,⏚)		TE2 (L+, L-)		TE3 (L11, L21, L12, L22)	
		mm²	AWG	mm²	AWG	mm²	AWG
Power backup unit	MDS-DH-PFU	2	14	22	4	2	14

⚠ CAUTION

1. Selection conditions follow IEC/EN60204-1, UL508C, JEAC8001.
   - Ambient temperature is maximum 40°C.
   - Cable installed on walls without ducts or conduits.

   To use the wire under conditions other than above, check the standards you are supposed to follow.
2. The maximum wiring length to the motor is 30m.

   If the wiring distance between the drive unit and motor is 20m or longer, use a thick wire so that the cable voltage drop is 2% or less.
3. Always wire the grounding wire.

6.2 Selection of Circuit Protector and Contactor

Always select the circuit protector and contactor properly, and install them to each power supply unit to prevent disasters.

6.2.1 Selection of Circuit Protector

Calculate a circuit protector selection current from the rated output and the nominal input voltage (voltage supplied to the power supply unit) as in the expression below. And then select the minimum capacity circuit protector whose rated current meets the circuit protector selection current.

< MDS-E Series >

Circuit protector selection current [A] =

(Circuit protector selection current for 200V input [A] / Nominal input voltage [V]) × 200 [V]

Selection of circuit protector for 200V input

Unit type MDS-E-CV-	37	75	110	185	300	370	450	550
Rated output	3.7kW	7.5kW	11kW	18.5kW	30kW	37kW	45kW	55kW
Circuit protector selection current for 200V input	15A	31A	45A	76A	124A	153A	186A	224A
Selection example of circuit protector (Mitsubishi Electric Corp.)	NF63-CW3P-20A	NF63-CW3P-40A	NF63-CW3P-50A	NF125-CW3P-100A	NF250-CW3P-125A	NF250-CW3P-175A	NF250-CW3P-200A	NF250-CW3P-225A
Rated current of the selection example of circuit protector	20A	40A	50A	100A	125A	175A	200A	225A

Option part: A circuit protector is not prepared as an NC unit accessory, so purchase the part from your dealer, etc.

(Example)
Select a circuit protector for using the MDS-E-CV-110 with a 220V nominal input voltage.
Circuit protector selection current = 45/220 × 200 = 40.9[A]
According to the table above, select "NF63-CW3P-50A".

< MDS-EH Series >

Circuit protector selection current [A] =

(Circuit protector selection current for 380V input [A] / Nominal input voltage [V]) × 380 [V]

Selection of circuit protector for 380V input

Unit type MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Rated output	3.7kW	7.5kW	11kW	18.5kW	30kW	37kW	45kW	55kW	75kW
Circuit protector selection current for 380V input	8A	16A	24A	40A	65A	80A	98A	119A	163A
Selection example of circuit protector (Mitsubishi Electric Corp.)	NF63-CW3P-10A	NF63-CW3P-20A	NF63-CW3P-30A	NF63-CW3P-40A	NF125-CW3P-75A	NF125-CW3P-100A	NF125-CW3P-100A	NF250-CW3P-125A	NF250-CW3P-200A
Rated current of the selection example of circuit protector	10A	20A	30A	40A	75A	100A	100A	125A	200A

Option part: A circuit protector is not prepared as an NC unit accessory, so purchase the part from your dealer, etc.

(Example)
Select a circuit protector for using the MDS-EH-CV-450 with a 480V nominal input voltage.
Circuit protector selection current = 98/480×380 = 77.6[A]
According to the table above, select "NF125-CW3P-100A".

⚠ CAUTION

1. It is dangerous to share a circuit protector for multiple power supply units, so do not share it. Always install the circuit protectors for each power supply unit.
2. If the control power (L11, L21) must be protected, select according to the section "Circuit protector ".

6.2.2 Selection of Contactor

Select the contactor selection current that is calculated from the rated output and the nominal input voltage (voltage supplied to the power supply unit) as in the expression below. And then select the contactor whose conventional free-air thermal current meets the contactor selection current.

< MDS-E Series >

Contactor selection current [A]=
(Contactor selection current for 200V input [A] / Nominal input voltage [V]) × 200 [V]

Selection of contactor for 200V input

Unit type MDS-E-CV-	37	75	110	185	300	370	450	550
Rated output	3.7kW	7.5kW	11kW	18.5kW	30kW	37kW	45kW	55kW
Contactor selection current for 200V input	15A	31A	45A	76A	124A	153A	186A	224A
Selection example of contactor (Mitsubishi Electric Corp.)	S-T12 -AC200V	S-T35 -AC200V	S-T35 -AC200V	S-T65 -AC200V	S-T80 -AC200V	S-N150 -AC200V	S-N150 -AC200V	S-N180 -AC200V
Conventional freeair thermal current of the selection example of contactor	20A	50A	50A	100A	135A	200A	200A	260A

Option part: A contactor is not prepared as an NC unit accessory, so purchase the part from your dealer, etc.

(Example)
Select a contactor for using the MDS-E-CV-110 with a 220V nominal input voltage.
Contactor selection current = 45/220 × 200 = 40.9[A]
According to the table above, select "S-T35-AC200V".

< MDS-EH Series >

Contactor selection current [A] =
(Contactor selection current for 380V input [A] / Nominal input voltage [V]) × 380 [V]

Selection of contactor for 380V input

Unit type MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Rated output	3.7kW	7.5kW	11kW	18.5kW	30kW	37kW	45kW	55kW	75kW
Contactor selection current for 380V input	8A	16A	24A	40A	65A	80A	98A	119A	163A
Selection example of contactor (Mitsubishi Electric Corp.)	S-T12- AC400V	S-T12- AC400V	S-T21- AC400V	S-T35- AC400V	S-T50- AC400V	S-T65- AC400V	S-T65- AC400V	S-T80- AC400V	S-N150- AC400V
Conventional freeair thermal current of the selection example of contactor	20A	20A	32A	50A	80A	100A	100A	135A	200A

Option part: A contactor is not prepared as an NC unit accessory, so purchase the part from your dealer, etc.

(Example)
Select a contactor for using the MDS-EH-CV-450 with a 480V nominal input voltage.
Contactor selection current = 98/480×380 = 77.6[A]
According to the table above, select "S-T50-AC400V".

POINT

1. Use an alternating contactor.
2. If the contactor selection current is 20A or less, select the S-T12 product for the contactor.
3. Select a contactor whose excitation coil does not operate at 15mA or less.

6.3 Selection of Earth Leakage Breaker

When installing an earth leakage breaker, select the breaker on the following basis to prevent the breaker from malfunctioning by the higher frequency earth leakage current generated in the servo or spindle drive unit.

(1) Selection

Obtaining the earth leakage current for all drive units referring to the following table, select an earth leakage breaker within the "rated non-operation sensitivity current".
Usually use an earth leakage breaker for inverter products that function at a leakage current within the commercial frequency range (50 to 60Hz).
If a product sensitive to higher frequencies is used, the breaker could malfunction at a level less than the maximum earth leakage current value.

Earth leakage current for each unit

Series	Drive unit	Earth leakage current	Maximum earth leakage current
MDS-E	MDS-E-SP-20 to 640	6mA	15mA
	MDS-E-SP2-20 to 80	6mA	30mA
	MDS-E-V1-20 to 320W	1mA	2mA
	MDS-E-V2-20 to 160W	1mA	4mA (for two axes)
	MDS-E-V3-20 to 40	3mA	6mA (for three axes)
MDS-EH	MDS-EH-SP-20 to 480	6mA	15mA
	MDS-EH-V1-10 to 200	1mA	2mA
	MDS-EH-V2-10 to 80W	1mA	4mA (for two axes)

(Note1) Maximum earth leakage current: Value that considers wiring length and grounding, etc.(Commercial frequency 50/60Hz)

(Note2) The earth leakage current in the power supply unit side is included in the drive unit side.

(2) Measurement of earth leakage current

When actually measuring the earth leakage current, use a product that is not easily affected by the higher frequency earth leakage current. The measurement range should be 50 to 60Hz.

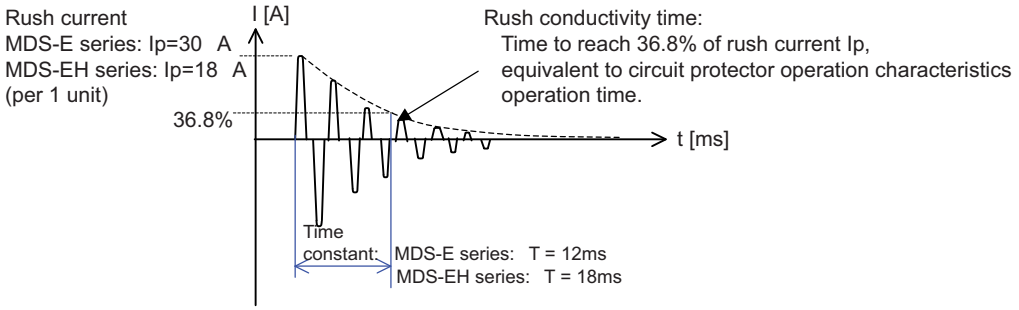
POINT

1. The earth leakage current tends to increase as the motor capacity increases.
2. A higher frequency earth leakage current will always be generated because the inverter circuit in the drive unit switches the transistor at high speed. Always ground to reduce the higher frequency earth leakage current as much as possible.
3. An earth leakage current containing higher frequency may reach approx. several hundreds of mA. According to IEC479-2, this level is not hazardous to the human body.

6.4 Branch-circuit Protection (for Control Power Supply)

6.4.1 Circuit Protector

This breaker is used to switch the control power and to provide overload and short-circuit protection.
When connecting a circuit protector to the power input (TE3 terminals L11 and L21) for the control circuit, use a product that does not trip (incorrectly activate) by a rush current when the power is turned ON. A circuit protector with inertial delay is available to prevent unnecessary tripping. Select the product to be used according to the machine specifications.
The rush current and rush conductivity time differ according to the power impedance and power ON timing, so select a product that does not trip even under the conditions listed in the following table.



POINT

When collectively protecting the control circuit power for multiple units, select a circuit protector that satisfies the total sum of the rush current Ip.
The largest value is used for the rush conductivity time T.

6.4.2 Fuse Protection

The fuse of branch-circuit protection must use UL class CC, J or T. In the selection, please consider rush current and rush conductive time.

Selection of branch-circuit protection fuse

Connected total of unit	Fuse (Class CC)		Wire Size
	Rated [V]	Current [A]	AWG
1 to 4	600	20	16 to 14
5 to 8		35	

⚠ CAUTION

For continued protection against risk of fire, replace only with same type 600 V, 80 or 35 A (UL CLASS CC) fuse.

⚠ WARNING

Before replacing fuse, confirm all power controlling the drive system is shut-OFF. Be sure to look out the power source to prevent the power from being turned ON while maintenance is being performed.

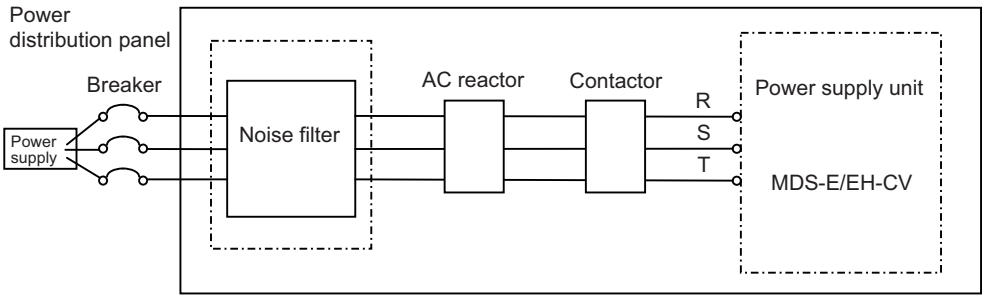
6.5 Noise Filter

(1) Selection

Use an EMC noise filter if the noise conducted to the power line must be reduced. Select an EMC noise filter taking the power supply unit's input rated voltage and input rated current into consideration.

(2) Noise filter mounting position

Install the noise filter to the power supply unit's power input as the diagram below indicates.



(Note) The noise filter must be prepared by the user.

Recommended devices:

MDS-E/EH Series

Soshin Electric HF3000C-SZA Series

Contact:

Soshin Electric Co., Ltd. http://www.soshin-ele.com/

(Note) The above devices may be changed at the manufacturer's discretion.
Contact each manufacturer for more information.

6.6 Surge Absorber

When controlling a magnetic brake of a servo motor in DC OFF circuit, a surge absorber must be installed to protect the relay contacts and brakes. Commonly a varistor is used.

(1) Selection of varistor

When a varistor is installed in parallel with the coil, the surge voltage can be adsorbed as heat to protect a circuit. Commonly a 82V product is applied. When the brake operation time is delayed, use a 120V product. Always confirm the operation with an actual machine.

(2) Specifications

Select a varistor with the following or equivalent specifications. To prevent short-circuiting, attach a flame resistant insulation tube, etc., onto the leads as shown in the following outline dimension drawing.

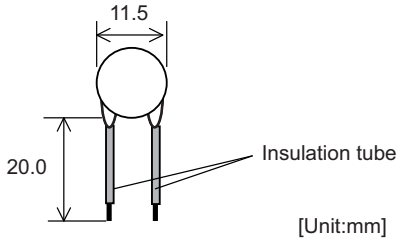
Varistor specification

Varistor type	Varistor voltage rating (range)	Rating							Max. limit voltage	Electrostatic capacity (reference value)
		Tolerable circuit voltage		Surge current withstand level (A)		Energy withstand level (J)		Power		
	(V)	AC(V)	DC(V)	1 time	2 times	10/1000μs	2ms	(W)	(V)	(pF)
ERZV10D820 TNR10V820K	82 (74 to 90)	50	65	3500	2500	14	10	0.4	135	2000
ERZV10D121 TND10V121K	120 (108 to 132)	75	100	3500	2500	20	14.5	0.4	200	1400

(Note) ERZV10D820 and ERZV10D121 are manufactured by Panasonic Corporation.
TNR10V820K and TNR10V121K are manufactured by Nippon Chemi-Con Corporation.
Contact: Panasonic Corporation http://www.panasonic.com/
Nippon Chemi-Con Corporation http://www.chemi-con.co.jp/e/index.html

(3) Outline dimension drawing

ERZV10D820, ERZV10D121



POINT

Normally use a product with 82V varistor voltage. If there is no allowance for the brake operation time, use the 120V product. A varistor whose voltage exceeds 120V cannot be used, as such varistor will exceed the specifications of the relay in the unit.

6.7 Relay

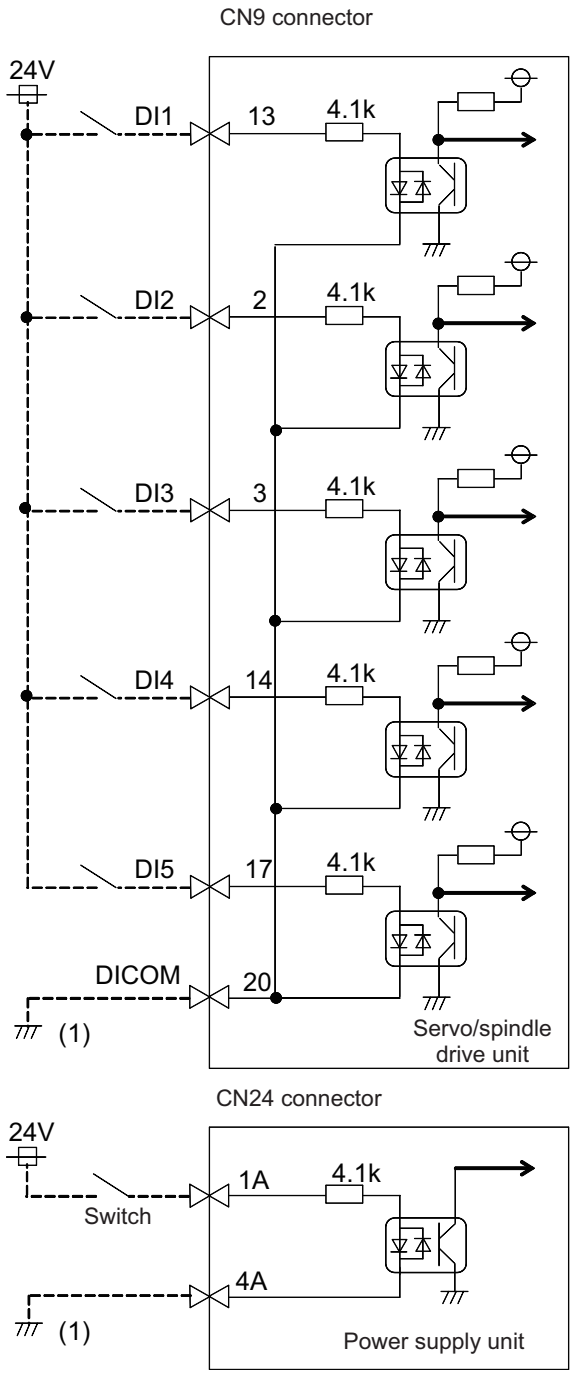
CN9 connector is equipped with 24V input/output circuit for the control of external devices and the control by an external signal.
Set the relevant parameters and use them with care for the wiring since some signals are changeover type, which can be switched over by parameters. Refer to the description of each function in relevant sections for details on the function specifications and settings.

Connector	Input condition		Connector	Output condition	
CN9	**Switch ON**	18VDC to 25.2VDC 4.3mA or more	CN9	**Output voltage**	24VDC ±5%
	Switch OFF	4VDC or less 2mA or less		**Tolerable output current**	50mA or less
CN24	**Switch ON**	18VDC to 25.2VDC 4.3mA or more			
	Switch OFF	4VDC or less 2mA or less			

For a switch or relay to be wired, use a switch or relay that satisfies the input/output (voltage, current) conditions.

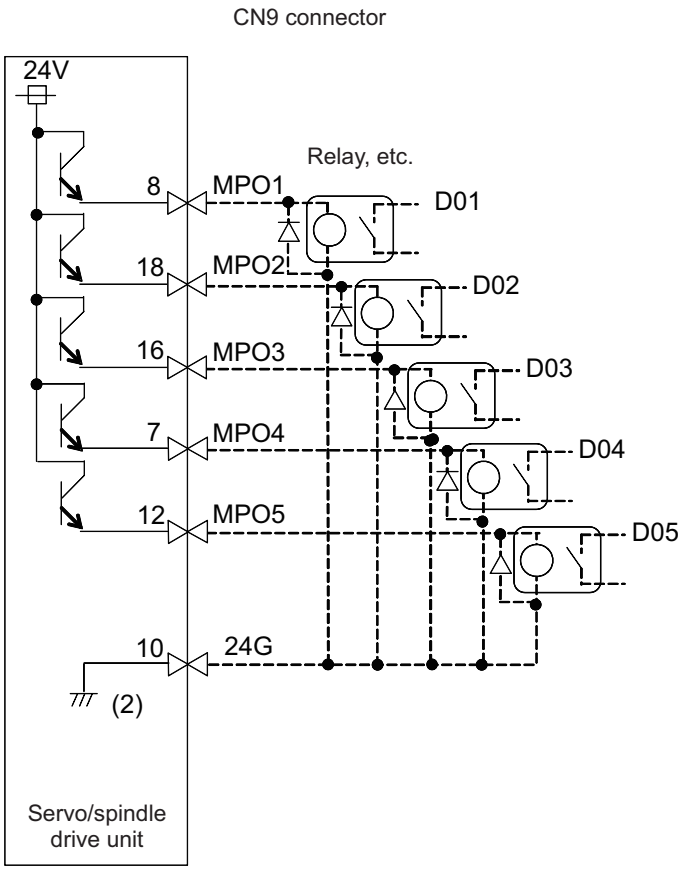
Interface name	Selection example
For digital input signal (CN24,CN9)	Use a minute signal switch which is stably contacted and operated even with low voltage or current. < Example > OMRON: G2A, G6B type, MY type, LY type
For digital output signal (CN9)	Use a compact relay operated with rating of 24VDC, 40mA or less. < Example > OMROM: G6B type, MY type

Input circuit



CN24 connector

Output circuit



The part indicated by the " ----- " must be prepared by the user.

(Note) Do not connect "(1)" or "(2)".
If a ground of the external 24V power is same as the 24V power in the drive unit, a fault or abnormal operation could occur.

Servo input/output signal (CN9 connector)

	Device name	Connector pin No.	Signal name	Signal changeover parameter
Servo input signal	MPI1	CN9-13	(Reservation)	
	MPI2	CN9-2	(Reservation)	
	MPI3	CN9-3	(Reservation)	
	MPI4	CN9-14	(Reservation)	
	MPI5	CN9-17	(Reservation)	
Servo output signal	MPO1	CN9-8	SBC1 relay control	
	MPO2	CN9-18	Servo specified speed signal	SV082/bit9,8=01
	MPO3	CN9-16	SBC2 relay control	
	MPO4	CN9-7	(Reservation)	
	MPO5	CN9-12	(Reservation)	

Spindle input/output signal (CN9 connector)

	Device name	Connector pin No.	Signal name	Signal changeover parameter
Spindle input signal	MPI1	CN9-13	(Reservation)	
			Orientation function Proximity switch signal	SP227/bitF-C=4
	MPI2	CN9-2	(Reservation)	
	MPI3	CN9-3	(Reservation)	
	MPI4	CN9-14	(Reservation)	
	MPI5	CN9-17	(Reservation)	
Spindle input signal	MPO1	CN9-8	Coil changeover signal	
	MPO2	CN9-18	Spindle specified speed signal	SP229/bitC=1
	MPO3	CN9-16	(Reservation)	
	MPO4	CN9-7	(Reservation)	
	MPO5	CN9-12	(Reservation)	

POINT

The different signal changeover parameter setting is not available for the same connector pin number of each axis in 2-axis or 3-axis drive unit.

6.8 Selection of Link Bar

6.8.1 Wire Size for L11 and L21 Link Bar

Regardless of the power supply unit and drive unit capacities, the wire size must be IV2SQ or more. When using a conductor bar, the conductor cross-sectional area must be 1mm^2 or more.
The wire size between the circuit protector and L11, L21 must also be IV2SQ or more.

6.8.2 Wire Size for L+ and L- Link Bar

< Selection method 1 > To unify the L+ and L- link bar size

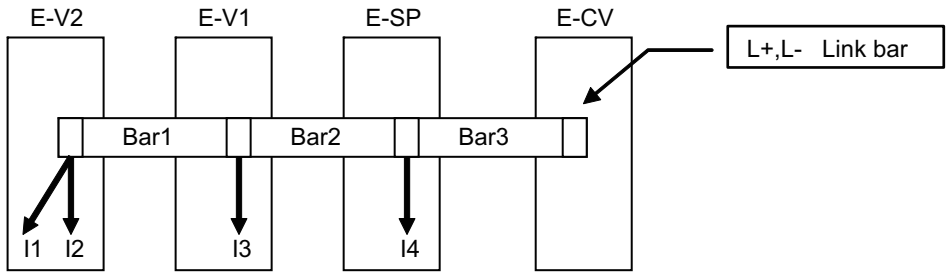
To unify the L+ and L- link bar size, select the following size or larger for the L+ and L- link bars connected to the same power supply unit based on the power supply unit capacity.

Model	E-CV-37	E-CV-75	E-CV-110	E-CV-185	E-CV-300	E-CV-370	E-CV-450	E-CV-550
Rated output current	17A	30A	41A	76A	144A	164A	198A	238A
Wire size	IV3.5SQ HIV3.5SQ	IV5.5SQ HIV5.5SQ	IV22SQ HIV14SQ	IV38SQ HIV22SQ	HIV60SQ	HIV60SQ or more	HIV60SQ or more	Dedicated bar
Conductor bar cross-sectional area	5mm^2 or more	8mm^{2}or more	11mm^{2}or more	19mm^{2}or more	36mm^{2}or more	41mm^{2}or more	50mm^{2}or more	

Model	EH-CV-37	EH-CV-75	EH-CV-110	EH-CV-185	EH-CV-300	EH-CV-370	EH-CV-450	EH-CV-550	EH-CV-750
Rated output current	7.1A	15A	21A	38A	72A	82A	99A	119A	150A
Wire size	IV2.0SQ HIV2.0SQ	IV3.5SQ HIV3.5SQ	IV5.5SQ HIV5.5SQ	IV14SQ HIV8SQ	IV38SQ HIV22SQ	IV50SQ HIV38SQ	IV60SQ HIV50SQ	Dedicated bar	Dedicated bar
Conductor bar cross-sectional area	2mm^2 or more	4mm^2 or more	6mm^2 or more	10mm^2 or more	18mm^2 or more	21mm^2 or more	25mm^2 or more		

< Selection method 2 > To suppress the L+ and L- link bar size to the minimum required for each unit

To suppress the L+ and L- link bar size to the minimum required for each unit, select as shown below based on the current value that actually flows to the link bar.
In this section, the case when two servo drive units and one spindle drive unit are connected to one power supply unit is explained. The same selection methods apply in all other cases.



(1) If the current which flows through the L+ and L- bus bars of each drive unit is I1 to I4 as shown above, the current that flows through each link bar (Bar1 to Bar3) is the following equation [1]. Thus, the wire for each L+, L- link bar should tolerate the above current.
However, if the above current (I(Bar □)) exceeds the rated output current in < Selection method 1 >, use the wire size and conductor bar for L+ and L- link bar in < Selection method 1 >.

$$\left.\begin{aligned} I(Bar1) &= I1 + I2 \\ I(Bar2) &= I1 + I2 + I3 \\ I(Bar3) &= I1 + I2 + I3 + I4 \end{aligned}\right\} \cdots [1]$$

(2) The I1 to I4 values are actually obtained with the following equation [2].

(I1 to I4) = Motor output current × 1.1 ・・・[2]

Note that the value of the following table (a) Compatible spindle drive unit capacity for spindle motor or (b) Compatible servo motor type for servo motor is substituted into "Motor output current" in the equation [2].

(a) Compatible spindle drive unit capacity

Spindle drive unit capacity	E-SP-20	E-SP-40	E-SP-80	E-SP-160	E-SP-200	E-SP-240	E-SP-320	E-SP-400
Motor output current	4.5A	10A	18A	37A	63A	79A	130A	174A

Spindle drive unit capacity	EH-SP-20	EH-SP-40	EH-SP-80	EH-SP-100	EH-SP-160	EH-SP-200	EH-SP-320	EH-SP-480	EH-SP-600
Motor output current	9A	13A	19A	30A	65A	70A	103A	132A	200A

(b) Compatible servo motor type

Servo motor type	HG75	HG105	HG54	HG104	HG154	HG224	HG204	HG354
Motor output current	2.8A	3.6A	1.8A	3.6A	5.8A	8.5A	6.8A	13.8A

Servo motor type	HG123	HG223	HG303	HG453	HG703	HG903	HG142	HG302
Motor output current	5.2A	9.0A	10.7A	13.4A	16.6A	27.2A	3.9A	10.9A

Servo motor type	HG46	HG56	HG96
Motor output current	1.4A	1.8A	3.3A

Servo motor type	HG-H75	HG-H105	HG-H54	HG-H104	HG-H154	HG-H204	HG354	HG453
Motor output current	1.4A	1.8A	0.9A	1.8A	2.9A	3.4A	6.9A	6.7A

Servo motor type	HG-H703	HG-H903
Motor output current	8.3A	13.6A

Servo motor type	HG-H903	HG-H1103
Motor output current	11.1A	12.6A

(3) Obtain I (Bar1) to I (Bar3) using the equations [1] based on I1 to I4 obtained with the equation (2)[2]. Match that value against the following table, and select the IV wire size.
When using a conductor bar, calculate the value at 4A (reference value) per 1mm^2 of conductor area.

Wire size	Tolerable current	
	IV wire (60°C)	HIV wire (75°C)
2SQ	15A	15A
3.5SQ	20A	20A
5.5SQ	28A	30A
8SQ	34A	46A
14SQ	50A	65A
22SQ	65A	85A
38SQ	92A	115A
60SQ	124A	150A

(Ambient temperature is 40°C or less)

⚠ CAUTION

1. When the number of units is an odd number, install and adjust the height by spacer etc. because the bar of the final axis floats by the thickness of the bar.
2. Unify the thickness of the bar to prevent a contact failure due to the inclination at thread fastening.
   The thickness for two-ply bar must be 6.4mm or less.
3. To ensure the contact area of the bar, 15 to 16mm is recommended for the bar width.
4. The following material and plating are recommended for the DC link bar.
   Material: Tough-pitch copper (C1100)
   Plating: Tin plating

7

Selection

7.1 Selection of the Servo Motor

7.1.1 Outline

It is important to select a servo motor matched to the purpose of the machine that will be installed. If the servo motor and machine to be installed do not match, the motor performance cannot be fully realized, and it will also be difficult to adjust the parameters. Be sure to understand the servo motor characteristics in this chapter to select the correct motor.

(1) Motor inertia

The servo motor has an optimum load inertia scale. If the load inertia exceeds the optimum range, the control becomes unstable and the servo parameters become difficult to adjust. When the load inertia is too large, decelerate with the gears (The motor axis conversion load inertia is proportional to the square of the deceleration ratio.), or change to a motor with a large inertia.

(2) Rated speed

Even with motors having the same capacity, the rated speed will differ according to the motor.
The motor's rated output is designed to be generated at the rated speed, and the output P (W) is expressed with expression (7-1). Thus, even when the motors have the same capacity, the rated torque will differ according to the rated speed.

$$P = 2\pi NT \text{ (W)} \quad \text{---(7-1)}$$

N: Motor speed (1/sec)
T: Output torque (N.m)

In other words, even with motors having the same capacities, the one with the lower rated speed will generate a larger torque. If generated torque is the same, the drive unit capacity can be downsized. When actually mounted on the machine, if the positioning distance is short and the motor cannot reach the maximum speed, the motor with the lower rated speed will have a shorter positioning time. When selecting the motor, consider the axis stroke and usage methods, and select the motor with the optimum rated speed.

7.1.2 Selection of Servo Motor Capacity

The following three elements are used to determine the servo motor capacity.

1. Load inertia ratio
2. Short time characteristics (acceleration/deceleration torque)
3. Continuous characteristics (continuous effective load torque)

Carry out appropriate measures, such as increasing the motor capacity, if any of the above conditions is not fulfilled.

(1) Load inertia ratio

Each servo motor has an appropriate load inertia ratio (load inertia/motor inertia). The control becomes unstable when the load inertia ratio is too large, and the servo parameter adjustment becomes difficult. It becomes difficult to improve the surface precision in the feed axis, and the positioning time cannot be shortened in the positioning axis because the settling time is longer.

If the load inertia ratio exceeds the recommended value in the servo specifications list, increase the motor capacity, and select so that the load inertia ratio is within the recommended range.

Note that the recommended value for the load inertia ratio is strictly one guideline. This does not mean that controlling of the load with inertia exceeding the recommended value is impossible.

POINT

1. When selecting feed axis servo motors for NC unit machine tools, place importance on the surface precision during machining. To do this, always select a servo motor with a load inertia ratio within the recommended value. Select the lowest value possible within that range.
2. The load inertia ratio for the motor with brakes must be judged based on the motor inertia for the motor without brakes.

(2) Short time characteristics

In addition to the continuous operation range, the servo motor has the short time operation range that can be used only in a short time such as acceleration/deceleration. This range is expressed by the maximum torque and the torque characteristics. The maximum torque or the torque characteristics differ according to each motor, so confirm the specifications in section "2.1 Servo Motor".

The torque required for the servo motor's acceleration/deceleration differs according to the CNC's command pattern or the servo's position control method.

Determine the required maximum motor torque from the following expression, and select the servo motor capacity.

(a) Selection with the maximum torque characteristics

In a low-speed rotation range (approximately less than half of the servo motor maximum speed), the linear acceleration/deceleration time constant "ta" that can be driven depends on the motor maximum torque. That can be approximated from the machine specifications using the expression (7-2).

$$ta = \frac{1.05 \times 10^{-2} \times (J_L/\eta + J_M) \times N}{(0.8 \times T_{MAX} - T_L)} \quad (ms) \quad \cdots (7\text{-}2)$$

N	: Motor reach speed	(r/min)
J_L	: Motor shaft conversion load inertia	($\times 10^{-4}$kg•m^2)
J_M	: Motor inertia	($\times 10^{-4}$kg•m^2)
η	: Drive system efficiency (Normally 0.8 to 0.95)	
T_{MAX}	: Maximum motor torque	(N•m)
T_L	: Motor shaft conversion load (friction, unbalance) torque	(N•m)

Using the approximate linear acceleration/deceleration time constant "ta" calculated above, confirm the torque characteristics of the high-speed rotation range in the CNC's command pattern or the servo's position control method.

(b) Approximation when using the NC command linear acceleration/deceleration pattern + servo standard position control

This is a normal command pattern or servo standard position control method.

Using the expression (7-3) and (7-4), approximate the maximum torque "Ta1" and maximum torque occurrence speed "Nm" required for this acceleration/deceleration pattern.

$$Ta1 = \frac{1.05 \times 10^{-2} \times (J_L/\eta + J_M) \times N}{ta} \times (1 - e^{\frac{-Kp \times ta}{1000}}) + T_L \quad (N \cdot m) \quad \cdots (7\text{-}3)$$

$$Nm = N \times \{1 - \frac{1000}{Kp \times ta} \times (1 - e^{\frac{-Kp \times ta}{1000}})\} \quad (r/min) \quad \cdots (7\text{-}4)$$

ta	: Acceleration/deceleration time constant	(ms)
Kp	: Position loop gain (SV003)	(rad/s)
N	: Motor reach speed	(r/min)
J_L	: Motor shaft conversion load inertia	($\times 10^{-4}$kg•m^2)
J_M	: Motor inertia	($\times 10^{-4}$kg•m^2)
η	: Drive system efficiency (Normally 0.8 to 0.95)	
T_L	: Motor shaft conversion load (friction, unbalance) torque	(N•m)

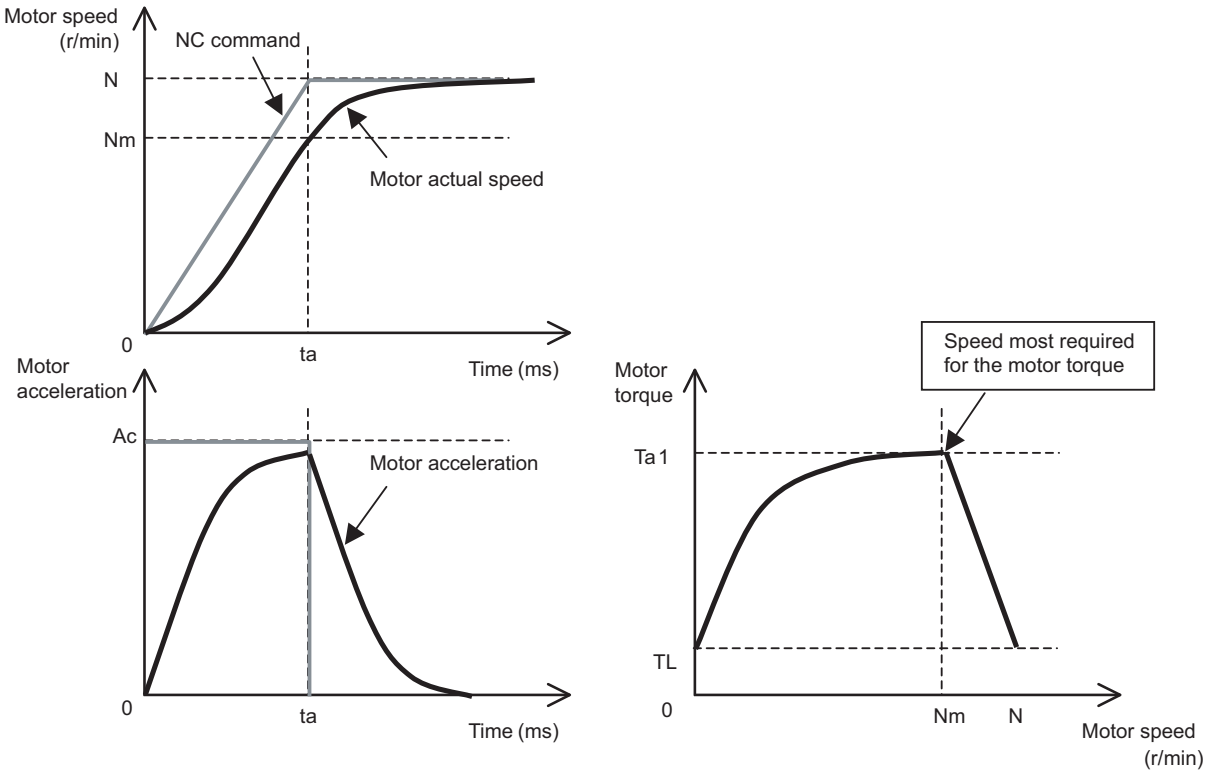


Fig.1 Speed, acceleration and torque characteristics when using the NC command linear acceleration/deceleration pattern + servo standard position control

(c) Approximation when using the NC command linear acceleration/deceleration pattern + servo SHG control (option)
This is a servo's position control method to achieve a normal command pattern and high precision. SHG control improves the position loop gain by stably controlling a delay of the position loop in the servo system. This allows the settling time to be reduced and a high precision to be achieved.
Using the expression (7-5) and (7-6), approximate the maximum torque "Ta1" and maximum torque occurrence speed "Nm" required for this acceleration/deceleration pattern.

$$T_a1 = \frac{1.05 \times 10^{-2} \times (J_L/\eta + J_M) \times N}{ta} \times (1 - 0.586 \times e^{\frac{-2 \times Kp \times ta}{1000}}) + T_L \quad (N \cdot m) \quad \bullet\bullet\bullet (7\text{-}5)$$

$$Nm = N \times \{1 - \frac{1000}{1.3 \times Kp \times ta} \times (1 - 1.5 \times e^{\frac{-2 \times Kp \times ta}{1000}})\} \quad (r/min) \quad \bullet\bullet\bullet (7\text{-}6)$$

ta	: Acceleration/deceleration time constant	(ms)
Kp	: Position loop gain (SV003)	(rad/s)
N	: Motor reach speed	(r/min)
J_L	: Motor shaft conversion load inertia	($\times 10^{-4}$kg•m^2)
J_M	: Motor inertia	($\times 10^{-4}$kg•m^2)
η	: Drive system efficiency (Normally 0.8 to 0.95)	
T_L	: Motor shaft conversion load (friction, unbalance) torque	(N•m)

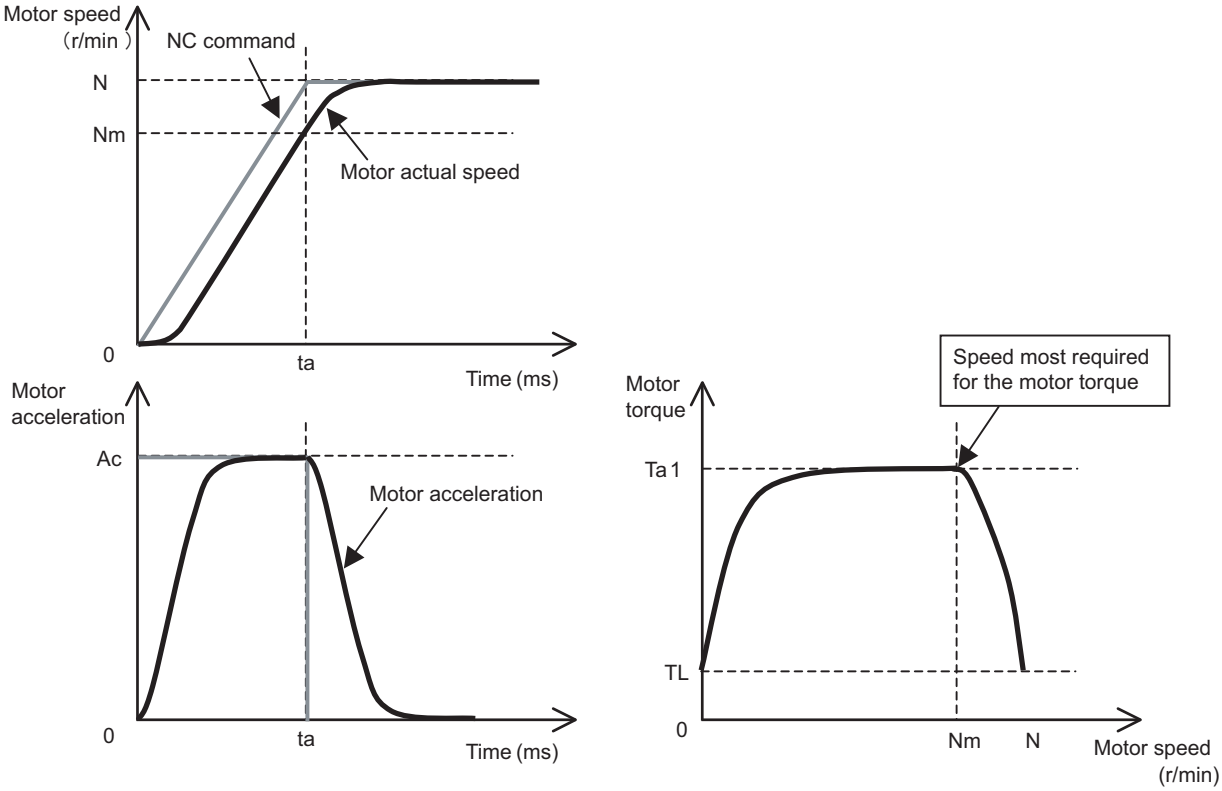

Fig.2 Speed, acceleration and torque characteristics when using the NC command linear acceleration/deceleration pattern + servo SHG control

(d) Approximation when using the NC command soft acceleration/deceleration pattern + feed forward control
This is an approximation when using high-speed high-accuracy control and OMR-FF control.
If the feed forward amount is set properly, the delay of the servo position loop is guaranteed. Therefore, this command acceleration pattern can be approximated to the NC command and does not depend on the servo position control method.
Using the expression (7-7) and (7-8), approximate the maximum torque "Ta1" and maximum torque occurrence speed "Nm" required for this acceleration/deceleration pattern.

$$Ta1 = \frac{1.05 \times 10^{-2} \times (J_L/\eta + J_M) \times N}{ta} + T_L \quad (N \cdot m) \quad \bullet\bullet\bullet (7\text{-}7)$$

$$Nm = N \times (1 - \frac{1}{2} \times \frac{tb}{ta}) \quad (r/min) \quad \bullet\bullet\bullet (7\text{-}8)$$

ta	: Acceleration/deceleration time constant	(ms)
tb	: Acceleration/deceleration time constant	(ms)
N	: Motor reach speed	(r/min)
J_L	: Motor shaft conversion load inertia	($\times 10^{-4}$kg•m^2)
J_M	: Motor inertia	($\times 10^{-4}$kg•m^2)
η	: Drive system efficiency (Normally 0.8 to 0.95)	
T_L	: Motor shaft conversion load (friction, unbalance) torque	(N•m)

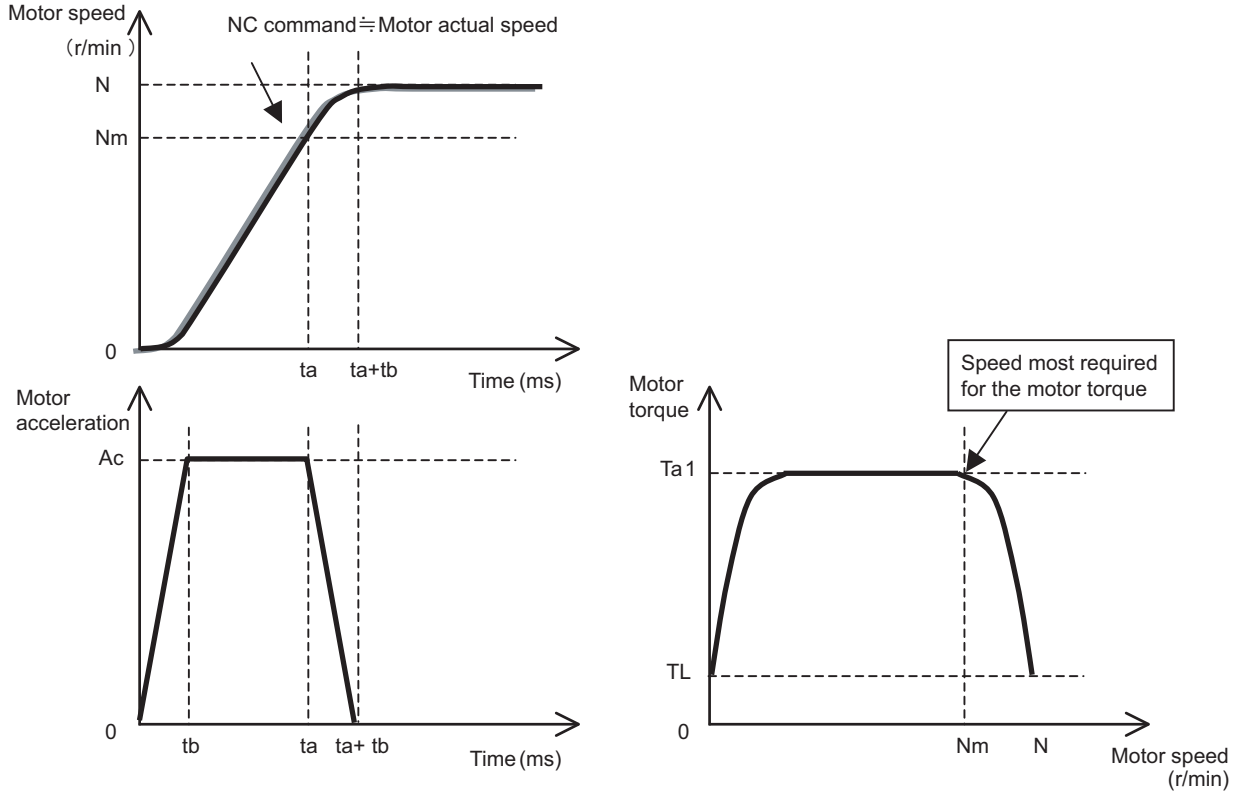

Fig 3. Speed, acceleration and torque characteristic when using the NC command soft acceleration/deceleration pattern + feed forward control

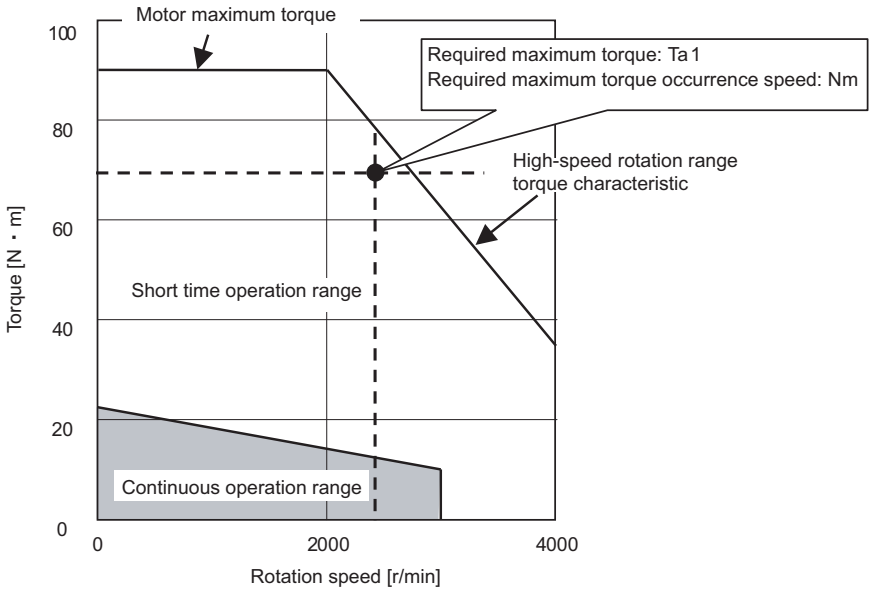
(e) Confirmation in the torque characteristics
Confirm whether the maximum torque "Ta1" and maximum torque occurrence speed "Nm" required for this acceleration/deceleration pattern calculated in the item "(b)" to "(d)" are in the short time operation range of the torque characteristics.



Motor torque characteristics

If they are not in the short time operation range, return to the item "(b)" to "(d)" and make the linear acceleration/deceleration time constant "ta" large.
If the acceleration specification cannot be changed (the linear acceleration/deceleration time constant cannot be increased), reconsider the selection, such as increasing the motor capacity.

POINT

1. In selecting the maximum torque "Ta1" required for this acceleration/deceleration pattern, the measure of it is 80% of the motor maximum torque "T_{MAX} "
2. In high-speed rotation range, confirm that the maximum torque "Ta1" and maximum torque occurrence speed "Nm" required for this acceleration/deceleration is in the short time operation range.
3. The drive system efficiency is normally approx. 0.95 in the ball screw mechanism and approx. 0.8 in the gear mechanism
4. For the torque characteristics in the motor high-speed rotation range, the AC input voltage is 200V (200V series) or 380V (400V series). If the input voltage is low or if the power wire connecting the servo motor and drive unit is long (20m length), the short time operation range is limited. In this case, an allowance must be provided for the selection of the high-speed rotation range.

(3) Continuous characteristics

A typical operation pattern is assumed, and the motor's continuous effective load torque (Trms) is calculated from the motor shaft conversion and load torque. If numbers <1> to <8> in the following drawing were considered a one cycle operation pattern, the continuous effective load torque is obtained from the root mean square of the torque during each operation, as shown in the expression (7-9).

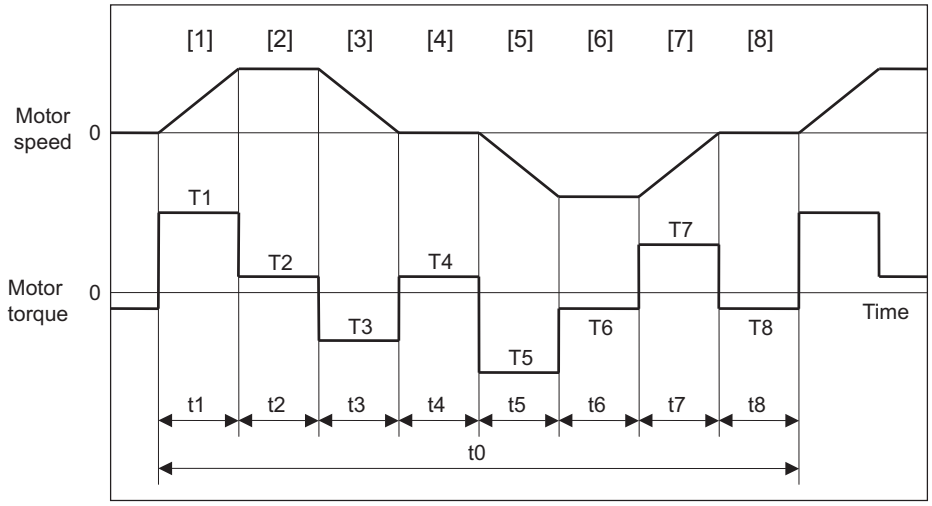


Fig. 1 Continuous operation pattern

$$Trms = \sqrt{\frac{T1^2 \cdot t1 + T2^2 \cdot t2 + T3^2 \cdot t3 + T4^2 \cdot t4 + T5^2 \cdot t5 + T6^2 \cdot t6 + T7^2 \cdot t7 + T8^2 \cdot t8}{t0}} \quad \cdots (7\text{-}9)$$

Select a motor so that the continuous effective load torque Trms is 80% or less of the motor stall torque Tst.

$$Trms \leqq 0.8 \cdot Tst \quad \cdots (7\text{-}10)$$

The amount of acceleration torque (Ta) shown in tables 7-3 and 7-4 is the torque to accelerate the load inertia in a frictionless state. It can be calculated by the expression (7-11). (For Acceleration/deceleration)

$$T_a = \frac{1.05 \times 10^{-2} \times (J_L/\eta + J_M) \times N}{ta} \quad (N \cdot m) \quad \cdots (7\text{-}11)$$

N	: Motor reach speed	(r/min)
J_L	: Motor shaft conversion load inertia	($\times 10^{-4}$kg•m^2)
J_M	: Motor inertia	($\times 10^{-4}$kg•m^2)
ta	: Acceleration/deceleration time constant	(ms)
η	: Drive system efficiency (Normally 0.8 to 0.95)	

For an unbalance axis, select a motor so that the motor shaft conversion load torque (friction torque + unbalance torque) is 60% or less of the stall.

$$TL \leqq 0.6 \cdot Tst \quad \cdots (7\text{-}12)$$

(a) Horizontal axis load torque

When operations [1] to [8] are for a horizontal axis, calculate so that the following torques are required in each period.

Table 7-3 Load torques of horizontal axes

Period	Load torque calculation method	Explanation
[1]	(Amount of acceleration torque) + (Kinetic friction torque)	Normally the acceleration/deceleration time constant is calculated so that this torque is 80% of the maximum torque of the motor.
[2]	(Kinetic friction torque)	
[3]	(Amount of deceleration torque) + (Kinetic friction torque)	The absolute value of the acceleration torque amount is same as the one of the deceleration torque amount. The signs for the amount of acceleration torque and amount of deceleration torque are reversed.
[4]	(Static friction torque)	Calculate so that the static friction torque is always required during a stop.
[5]	- (Amount of acceleration torque) - (Kinetic friction torque)	The signs are reversed with period <1> when the kinetic friction does not change according to movement direction.
[6]	- (Kinetic friction torque)	The signs are reversed with period <2> when the kinetic friction does not change according to movement direction.
[7]	- (Amount of deceleration torque) - (Kinetic friction torque)	The signs are reversed with period <3> when the kinetic friction does not change according to movement direction.
[8]	- (Static friction torque)	Calculate so that the static friction torque is always required during a stop.

(b) Unbalance axis load torque

When operations [1] to [8] are for an unbalance axis, calculate so that the following torques are required in each period. Note that the forward speed shall be an upward movement.

Table 7-4 Load torques of unbalance axes

Period	Load torque calculation method	Explanation
[1]	(Amount of acceleration torque) + (Kinetic friction torque) + (Unbalance torque)	Normally the acceleration/deceleration time constant is calculated so that this torque is 80% of the maximum torque of the motor.
[2]	(Kinetic friction torque) + (Unbalance torque)	
[3]	(Amount of deceleration torque) + (Kinetic friction torque) + (Unbalance torque)	The absolute value of the acceleration torque amount is same as the one of the deceleration torque amount. The signs for the amount of acceleration torque and amount of deceleration torque are reversed.
[4]	(Static friction torque) + (Unbalance torque)	The holding torque during a stop becomes fairly large. (Upward stop)
[5]	- (Amount of acceleration torque) - (Kinetic friction torque) + (Unbalance torque)	
[6]	- (Kinetic friction torque) + (Unbalance torque)	The generated torque may be in the reverse of the movement direction, depending on the size of the unbalance torque.
[7]	- (Amount of deceleration torque) - (Kinetic friction torque) + (Unbalance torque)	
[8]	- (Static friction torque) + (Unbalance torque)	The holding torque becomes smaller than the upward stop. (Downward stop)

POINT

During a stop, the static friction torque may constantly be applied. The static friction torque and unbalance torque may be applied during an unbalance axis upward stop, and the torque during a stop may become extremely large. Therefore, caution is advised.

7.1.3 Motor Shaft Conversion Load Torque

The calculation method for a representative load torque is shown.

Type	Mechanism	Calculation expression
Linear movement		$T_L = \frac{F}{2\times10^3\pi\eta}\cdot(\frac{V}{N}) = \frac{F\cdot\Delta S}{2\times10^3\pi\eta}$ T_L:Load torque (N•m) F:Force in axial direction of the machine that moves linearly (N) η: Drive system efficiency V:Speed of object that moves linearly (mm/min) N:Motor speed (r/min) ΔS:Object movement amount per motor rotation (mm) Z_1,Z_2:Deceleration ratio **F in the above expression is obtained from the expression below when the table is moved as shown on the left.** **$F=Fc+\mu(W\cdot g+F_0)$** F_c:Force applied on axial direction of moving section (N) F_0:Tightening force on inner surface of table guide (N) W:Total mass of moving section (kg) g:Gravitational acceleration = 9.8 (m/s^2) μ:Friction coefficient
Rotary movement		$T_L = \frac{Z_1}{Z_2}\cdot\frac{1}{\eta}\cdot T_{L0}+T_F = \frac{1}{n}\cdot\frac{1}{\eta}\cdot T_{L0}+T_F$ T_L:Load torque (N•m) T_{L0}:Load torque on load shaft (N•m) T_F:Motor shaft conversion load friction torque (N•m) η:Drive system efficiency Z_1,Z_2:Deceleration ratio n:Deceleration ratio
Vertical movement		**When rising $T_L=T_U+T_F$ When lowering $T_L=-T_U\cdot\eta^2+T_F$** T_L:Load torque (N•m) T_U:Unbalanced torque (N•m) T_F:Friction torque on moving section (N•m) $T_U = \frac{(W_1-W_2)\cdot g}{2\times10^3\pi\eta}\cdot(\frac{V}{N}) = \frac{(W_1-W_2)\cdot g\cdot\Delta S}{2\times10^3\pi\eta}$ $T_F = \frac{\mu\cdot(W_1+W_2)\cdot g\cdot\Delta S}{2\times10^3\pi\eta}$ W_1:Load mass (kg) W_2:Counterweight mass (kg) η: Drive system efficiency g:Gravitational acceleration = 9.8 (m/s^2) V:Speed of object that moves linearly (mm/min) N:Motor speed (r/min) ΔS:Object movement amount per motor rotation (mm) μ:Friction coefficient

7.1.4 Expressions for Load Inertia Calculation

The calculation method for a representative load inertia is shown.

Type	Mechanism	Calculation expression
Cylinder	Rotary shaft is cylinder center 	$J_L = \frac{\pi \cdot \rho \cdot L}{32} \cdot (D_1^4 - D_2^4) = \frac{W}{8} \cdot (D_1^2 + D_2^2)$ T_L:Load inertia (kg•cm^2) ρ: Density of cylinder material (kg/cm^3) L:Length of cylinder (cm) D_1:Outer diameter of cylinder (cm) D_2:Inner diameter of cylinder (cm) W:Mass of cylinder (kg) <Reference data (Material densities)> Iron:7.80×10^{-3}(kg/cm^3) Aluminum:2.70×10^{-3}(kg/cm^3) Copper:8.96×10^{-3}(kg/cm^3)
	When rotary shaft and cylinder shaft are deviated 	$J_L = \frac{W}{8} \cdot (D^2 + 8R^2)$ J_L:Load inertia (kg•cm^2) W:Mass of cylinder (kg) D:Outer diameter of cylinder (cm) R:Distance between rotary axis and cylinder axis (cm)

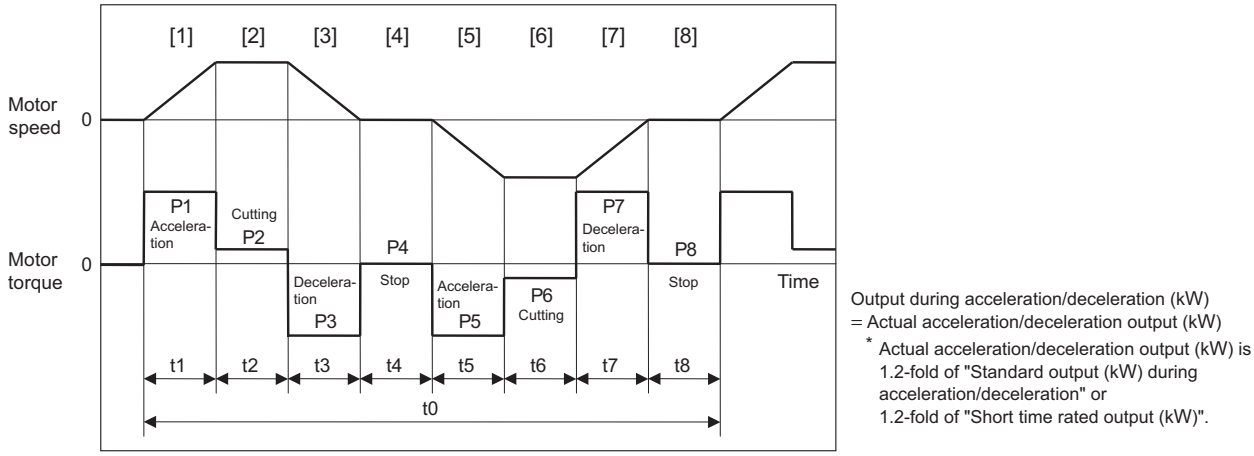
Converted load		$J_L = J_{11} + (J_{21} + J_{22} + J_A) \cdot (\frac{N_2}{N_1})^2 + (J_{31} + J_B) \cdot (\frac{N_3}{N_1})^2$ J_L:Load inertia (kg•cm^2) J_A,J_B:Inertia of load A, B (kg•cm^2) J_{11} to J_{31}:Inertia (kg•cm^2) N_1 to N_3:Each shaft's speed (r/min)

7.2 Selection of the Spindle Motor

(1) Calculation of average output for spindle

In the machine which carries out the spindle's acceleration/deceleration frequently (example: tapping center), short-time rating is frequently used, and a rise in temperature become significant on the spindle motor or drive unit. Thus, calculate the average output (P_{AV}) from one cycle operation pattern and confirm that the calculated value is less than the continuous rating output of the selected spindle motor.



Output during acceleration/deceleration (kW)
= Actual acceleration/deceleration output (kW)
* Actual acceleration/deceleration output (kW) is 1.2-fold of "Standard output (kW) during acceleration/deceleration" or 1.2-fold of "Short time rated output (kW)".

Continuous operation pattern (example)

$$P_{AV} = \sqrt{\frac{P1^2 \cdot t1 + P2^2 \cdot t2 + P3^2 \cdot t3 + P4^2 \cdot t4 + P5^2 \cdot t5 + P6^2 \cdot t6 + P7^2 \cdot t7 + P8^2 \cdot t8}{t0}}$$

P1 to P8 :Output
t1 to t8 :Time
t0 :One cycle operation time

Continuous rated output $\geqq$ One cycle operation pattern average output (P_{AV})

POINT

1. Calculate acceleration/deceleration time by the accurate load inertia because even if the rotation speed is the same, acceleration/deceleration time varies with a tool or workpiece mounted to the spindle.
   Refer to the section "Adjusting the Acceleration/Deceleration Operation" (1) in Instruction Manual.
2. Calculation method of synchronous tapping
   The acceleration/deceleration number of times is twice, for forward run and reverse run are carried out in one machining.
   The output guideline is 50% of the short-time rating. The time is tapping time constant.
3. Calculation method of spindle synchronization
   The output guideline is 70% of the short-time rating. The time is spindle synchronization time constant.

7.3 Selection of the Power Supply Unit

For the power supply unit, calculate the spindle motor output and servo motor output each, and select the capacity satisfying the required rated capacity and the maximum momentary output.

7.3.1 Calculation of Spindle Output

The spindle rated output and spindle maximum momentary rated output are calculated.

(1) Calculation of spindle rated output

The spindle rated output is calculated according to the following procedure.

(a) Spindle motor rated output

The spindle motor rated output is calculated from the following expression.

Spindle motor rated output =
MAX (continuous rated output, short-time rated output × short-time rated output coefficient α, %ED rated output × %ED rated output coefficient β)

(Note 1) For the spindle motor rated output, use the maximum value of "continuous rated output", "short-time rated output × short-time rated output coefficient α", and "%ED rated output × %ED rated output coefficient β".
(Note 2) Select the maximum value for the spindle motor with multiple %ED rated output characteristics.

For the spindle short-time rated output coefficient α, use the value in the "Table 1.1", and for the %ED rated output coefficient β, use the value in the "Table 1.2".

Table1.1 List of short-time rated output time and short-time rated output coefficient

Short-time rated output time	Short-time rated output coefficient α	Short-time rated output time	Short-time rated output coefficient α
1 minute	0.2	**5 minutes**	0.7
2 minutes	0.4	**6 to 7 minutes**	0.8
3 minutes	0.5	**8 to 9 minutes**	0.9
4 minutes	0.6	**10 minutes or more**	1.0

(Note 1) Select the set time for the short-time rated output of your spindle motor from the list.
E.g.) When the set time for the short-time rated output is "1/12h", it means "5 minutes".
(Note 2) For the motor with coil changeover specification, select the set time for the short-time rated output of the high-speed coil.

Table 1.2 List of %ED rated output time and %ED rated output coefficient

%ED rated output time	%ED rated output coefficient β
More than or equal to 10% but less than 20%	0.7
More than or equal to 20% but less than 30%	0.9
More than or equal to 30%	1.0

(b) Spindle rated output

The spindle rated output is calculated from the following expression.

Spindle rated output

=Spindle motor rated output × motor output coefficient γ of the combined spindle drive unit

For the spindle motor rated output of the above expression, use the value calculated in (a).
For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit in the table 2.

Table 2. Motor output coefficient list of combined spindle drive unit

< MDS-E Series >

Spindle motor rated output	Combined spindle drive unit MDS-E-SP-								
	20	40	80	160	200	240	320	400	640
to 1.5kW	1.00	1.15	1.25	-	-	-	-	-	-
to 2.2kW	-	1.00	1.15	1.30	-	-	-	-	-
to 3.7kW	-	1.00	1.05	1.20	-	-	-	-	-
to 5.5kW	-	-	1.00	1.10	1.20	-	-	-	-
to 7.5kW	-	-	-	1.00	1.15	1.20	-	-	-
to 11.0kW	-	-	-	1.00	1.05	1.10	1.15	-	-
to 15.0kW	-	-	-	-	1.00	1.05	1.10	-	-
to 18.5kW	-	-	-	-	1.00	1.00	1.05	1.10	-
to 22kW	-	-	-	-	-	1.00	1.00	1.05	1.15
to 26kW	-	-	-	-	-	-	1.00	1.00	1.10
to 30kW	-	-	-	-	-	-	1.00	1.00	1.05
to 37kW	-	-	-	-	-	-	-	1.00	1.05
to 45kW	-	-	-	-	-	-	-	-	1.0
to 55kW	-	-	-	-	-	-	-	-	1.0

< MDS-EH Series >

Spindle motor rated output	Combined spindle drive unit MDS-EH-SP-								
	20	40	80	100	160	200	320	480	600
to 2.2kW	1.00	1.15	1.30	-	-	-	-	-	-
to 3.7kW	1.00	1.05	1.20	-	-	-	-	-	-
to 5.5kW	-	1.00	1.10	1.20	-	-	-	-	-
to 7.5kW	-	-	1.00	1.15	-	-	-	-	-
to 11.0kW	-	-	1.00	1.05	1.15	-	-	-	-
to 15.0kW	-	-	-	1.00	1.10	-	-	-	-
to 18.5kW	-	-	-	1.00	1.05	1.10	-	-	-
to 22kW	-	-	-	-	1.00	1.05	1.15	-	-
to 26kW	-	-	-	-	1.00	1.00	1.10	1.20	-
to 30kW	-	-	-	-	1.00	1.00	1.05	1.15	-
to 37kW	-	-	-	-	-	1.00	1.05	1.10	1.10
to 45kW	-	-	-	-	-	-	1.00	1.05	1.05
to 55kW	-	-	-	-	-	-	1.00	1.00	1.00
to 75kW	-	-	-	-	-	-	-	1.00	1.00

POINT

1. When the spindle motor applies to the wide range constant output specification or the high-torque specification, the spindle rated output may become large.
2. The spindle rated output is calculated from the motor output coefficient of the spindle drive unit used in combination with the spindle motor.

(2) Calculation of spindle maximum momentary output

The spindle maximum momentary output is calculated from the following expression.

Spindle maximum momentary output
=MAX (short-time rated output × 1.2, output at acceleration/deceleration × 1.2 or %ED rated output×1.2)

(Note) For the spindle rated output, use the larger one of "short-time rated output × 1.2" , "output at acceleration/deceleration × 1.2" or "%ED rated output×1.2".

7.3.2 Calculation of Servo Motor Output

(1) Selection with rated output

(2) Selection with maximum momentary output

For the rated output and maximum momentary output of the servo motor, use the value corresponding to the servo motor in the table 3.

Table 3. Data for servo motor output selection

< 200V series >

Motor HG	75	105	54	104	154	224	204	354
Rated output (kW)	0.75	1.0	0.5	1.0	1.5	2.2	2.0	3.5
Maximum momentary output (kW)	2.6	3.6	2.3	5.0	9.0	12.3	8.0	18.0

Motor HG	123	223	303	453	703	903	142	302
Rated output (kW)	1.2	2.2	3.0	4.5	7.0	9.0	1.4	3.0
Maximum momentary output (kW)	4.0	7.5	12.0	22.0	28.0	41.0	3.8	7.4

Motor HG	46	56	96
Rated output (kW)	0.4	0.5	0.9
Maximum momentary output (kW)	0.85	1.7	3.2

< 400V series >

Motor HG-H	75	105	54	104	154	204	354	453	703	903	1502
Rated output (kW)	0.75	1.0	0.5	1.0	1.5	2.0	3.5	4.5	7.0	9.0	15.0
Maximum momentary output (kW)	2.6	3.6	2.3	5.0	9.0	8.0	18.0	22.0	28.0	41.0	61.0

Motor HQ-H	903	1103
Rated output (kW)	9.0	11.0
Maximum momentary output (kW)	33.0	50.0

(Note) The maximum momentary output in this table is reference data for selecting the power supply unit and is not data which guarantees the maximum output.

7.3.3 Selection of the Power Supply Unit

Select the power supply unit from the total sum of the rated output and the maximum momentary output.

(1) Calculation of required rated output

Power supply unit rated capacity > Σ (Spindle rated output) + 0.3 Σ (Servo motor rated output)

Substitute the output calculated from "7.3.1(1)" and "7.3.2(1)" to the above expression, and calculate the total sum of the spindle rated output and servo motor rated output. According to this, select the power supply unit satisfying the rated capacity from the table 4.

(2) Calculation of required maximum momentary output

Maximum momentary rated capacity of power supply unit ≧
Σ (Spindle maximum momentary output) + Σ (Maximum momentary output of servomotor accelerating/ decelerating simultaneously + Maximum momentary output of direct drive motor accelerating/ decelerating simultaneously)

Substitute the output calculated from "7.3.1(2)" and "7.3.2(2)" to the above expression, and calculate the total sum of the "spindle maximum momentary output" and "output of servo motor accelerating/decelerating simultaneously". According to this, select the power supply unit satisfying the maximum momentary rated capacity from the table 4.

(3) Selection of power supply unit

Select the power supply unit of which the capacity is larger than that selected in the item (1) and (2).

Table 4. Power supply unit rated capacity and maximum momentary rated capacity

< MDS-E Series >

Unit / MDS-E-CV-	37	75	110	185	300	370	450	550
Rated capacity (kW)	4.2	8	11.5	19	31	38	46	56
Maximum momentary rated capacity (kW)	16	23	39	60	92	101	125	175

< MDS-EH Series >

Unit / MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Rated capacity (kW)	4.2	8	11.5	19	31	38	46	56	76
Maximum momentary rated capacity (kW)	16	23	39	60	92	101	125	175	180

⚠ CAUTION

1. When reducing the time constant replacing the conventional motor with the HG or HG-H Series motor, the power supply capacity may rise because the motor maximum momentary output increases more than the conventional motor. Therefore, make sure to check the selection with maximum momentary rated capacity.
2. When the large capacity drive unit (MDS-E-SP-400/640, MDS-EH-SP-200/320/480, MDS-EH-V1-200) is connected to the power supply unit, always install the drive unit proximally in the left side of the power supply unit and connect PN terminal with the dedicated DC connection bar.
3. When using two large capacity drive units or more, the power supply unit is required for each drive unit.

7.3.4 Required Capacity of Power Supply

For the power supply capacity, calculate the required spindle rated output and servo motor rated output each, and select the power supply capacity satisfying them.

(1) Spindle rated output required for power supply

The spindle rated output required for power supply is calculated from the following expression.

Spindle rated output required for power supply =
MAX (Spindle motor continuous rated output, Spindle motor output at accelerating/decelerating, Spindle motor short-time output)× motor output coefficient γ of combined spindle drive unit

(Note) For the spindle rated output required for the power supply, multiply the largest one of "spindle motor continuous rated output", "spindle motor output at acceleration/deceleration" and "spindle motor short-time output" by the motor output coefficient γ of the combined spindle drive unit.
For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit in the table 2. of 7.3.1 (1).

(2) Servo motor rated output required for power supply

For the servo motor rated output required for power supply, use the value calculated in 7.3.2 (1).

(3) Calculation of rated output required for power supply

Rated capacity required for power supply =
Σ (Spindle rated output required for power supply) + 0.3 Σ (servo motor rated output required for power supply)

Substitute the output calculated from the item (1) and (2) to the above expression, and calculate the rated capacity required for the power supply.

(4) Calculation of required power supply

Power supply capacity (kVA) = Σ{(Required rated capacity calculated in the item (3)(kW) / Capacity of selected power supply unit (kW)) × Power supply capacity base value (kVA)}

The power supply capacity base value corresponding to the capacity of the selected power supply unit is as the following table.

< MDS-E Series >

Unit	MDS-E-CV-	37	75	110	185	300	370	450	550
Power supply capacity base value (kVA)		5.3	11.0	16.0	27.0	43.0	53.0	64.0	78.0

< MDS-EH Series >

Unit	MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Power supply capacity base value (kVA)		5.3	11.0	16.0	27.0	43.0	53.0	64.0	78.0	107.0

7.3.5 Example for Power Supply Unit and Power Supply Facility Capacity

< MDS-E Series >

(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Y-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Z-axis	HG354	(MDS-E-V1-160)	3.5kW	18kW
Spindle	Spindle motor 22kW	MDS-E-SP-320 (Output coefficient 1.0)	22kW	26.4kW
Total			0.3 × (3.5 × 3) + 22 = 25.15kW < 31kW (E-CV-300)	(18 × 3) + 26.4 = 80.4kW < 92kW (E-CV-300)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-E-CV-300.
Required power supply capacity (kVA) = (25.15 / 30) × 43 = 36.0 (kVA)

(Example 2)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X1-axis	HG453	(MDS-E-V2-160)	4.5kW	22kW
X2-axis	HG453	(MDS-E-V2-160)	4.5kW	22kW
Y-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Z-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Spindle	Spindle motor 15kW	MDS-E-SP-200 (Output coefficient 1.0)	15kW	18kW
Total			0.3 × (4.5 × 2 + 3.5 x 2) + 15 = 19.8kW < 31kW (E-CV-300)	22 × 2 + 18 × 2 + 18 = 98.0kW < 101kW (E-CV-370)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-E-CV-370.
Required power supply capacity (kVA) = (19.8 / 37) × 53 = 28.4 (kVA)

(Example 3)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG354	MDS-E-V1-160	3.5kW	18kW
Y-axis	HG204	MDS-E-V2-80	2.0kW	8kW
Z-axis	HG204	MDS-E-V2-80	2.0kW	8kW
Spindle	Spindle motor 15kW (High-torque motor)	MDS-E-SP-320 (Output coefficient 1.1)	16.5kW	18kW
Total			0.3 × (3.5 + 2.0 × 2) + 16.5 = 18.75kW < 19kW (E-CV-185)	18 + 8 × 2 + 18 = 52kW < 60kW (E-CV-185)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-E-CV-185.
Required power supply capacity (kVA) = (18.75 / 18.5) × 27 = 27.4 (kVA)

< MDS-EH Series >

(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Y-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Z-axis	HG-H354	(MDS-EH-V1-80)	3.5kW	18kW
Spindle	Spindle motor 22kW	MDS-EH-SP-160 (Output 22kW)	22kW	26.4kW
Total			0.3×(3.5×3)+22 =25.15kW <31kW(EH-CV-300)	(18×3)+26.4 =80.4kW <92kW(EH-CV-300)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-EH-CV-300.
Required power supply capacity (kVA) = (25.15 / 30) x 43 = 36.0 (kVA)

(Example 2)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X1-axis	HG-H453	(MDS-EH-V2-80)	4.5kW	22kW
X2-axis	HG-H453	(MDS-EH-V2-80)	4.5kW	22kW
Y-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Z-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Spindle	Spindle motor 15kW	MDS-EH-SP-100 (Output coefficient 1.0)	15kW	18kW
Total			0.3×(4.5×2+3.5×2)+15 =19.8kW <31kW(EH-CV-300)	22×2+18×2+18 =98.0kW <101kW(EH-CV-370)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-EH-CV-370.
Required power supply capacity (kVA) = (19.8 / 37) x 53 = 28.4 (kVA)

(Example 3)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG-H354	MDS-EH-V1-160	3.5kW	18kW
Y-axis	HG-H204	MDS-EH-V2-80	2.0kW	8kW
Z-axis	HG-H204	MDS-EH-V2-80	2.0kW	8kW
Spindle	Spindle motor 15kW (High-torque motor)	MDS-EH-SP-320 (Output coefficient 1.1)	16.5kW	18kW
Total			0.3×(3.5+2.0×2)+16.5 =18.75kW <19kW(EH-CV-185)	18+8×2+18 =52kW <60kW(EH-CV-185)

The power supply unit satisfying the total of the rated output and the maximum momentary output is MDS-EH-CV-185.
Required power supply capacity (kVA) = (18.75 / 18.5) x 27 = 27.4 (kVA)

7.3.6 Selection of Regenerative Resistor for Power Backup Unit (R-UNIT-6,7) and Capacitor Unit for Power Backup Unit (MDS-D/DH-CU)

When using the retraction function at power failure with MDS-D/DH-PFU, select to satisfy the stop operation for the regenerative resistor and the continuous rated output of the spindle motor for the capacitor unit.

(1) Selection of regenerative resistor for power backup unit

When using the retraction function at power failure, a resistor unit is required to make the spindle deceleration and stop after the retraction is completed.

> **⚠ CAUTION**
>
> 1. When not using a resistor unit, control to coast the spindle motor after the retraction operation is completed.
> 2. Only the designated combination can be used for the power backup unit and the regenerative resistor.

(2) Selection of capacitor unit for power backup unit

When using the retraction function at power failure, the required number of capacitor units is decided by the continuous rated output [kW] of the spindle motor. Select according to the following specifications.

List of spindle continuous rated output and number of capacitor unit

Spindle continuous rated output	Number of capacitor unit
3.7kW or less	1
5.5kW or less	2
7.5kW or less	3
11kW or less	4
15kW or less	5
22kW or less	6

Appendix 1

Cable and Connector Specifications

Appendix 1.1 Selection of Cable

Appendix 1.1.1 Cable Wire and Assembly

(1) Cable wire

The specifications of the wire used for each cable, and the machining methods are shown in this section. The Mitsubishi designated cable is the recommended cables shown below. When manufacturing the encoder cable and battery connection cable, use the recommended wires shown below or equivalent products.

(a) Heat resistant specifications cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics					
				Configuration	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Flexibility
BD20288 Compound 6-pair shielded cable Specification No. Bangishi-17145 (Note 1)	8.7mm	Heat resistant PVC	2 ($0.5mm^2$)	100 strands/ 0.08mm	40.7Ω/km or less	500VAC/ 1min	1000 MΩ/km or more	105°C	$70×10^4$ times or more at R200
			4 ($0.2mm^2$)	40 strands/ 0.08mm	103Ω/km or less				

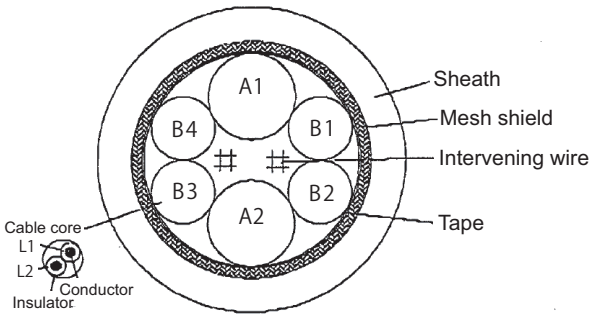
(b) General-purpose heat resistant specifications cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics					
				Configuration	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Flexibility
BD20032 Compound 6-pair shielded cable Specification No. Bangishi-16903 Revision No. 3 (Note 1)	8.7mm	PVC	2 ($0.5mm^2$)	100 strands/ 0.08mm	40.7Ω/km or less	500VAC/ 1min	1000 MΩ/km or more	60°C	$100×10^4$ times or more at R200
			4 ($0.2mm^2$)	40 strands/ 0.08mm	103Ω/km or less				

(Note 1) BANDO Electric Wire (http://www.bew.co.jp/)

(Note 2) The Mitsubishi standard cable is the (a) Heat resistant specifications cable. When the working environment temperature is low and so higher flexibility is required, use the (b) General-purpose heat resistant specifications cable.

Compound 6-pair cable structure drawing

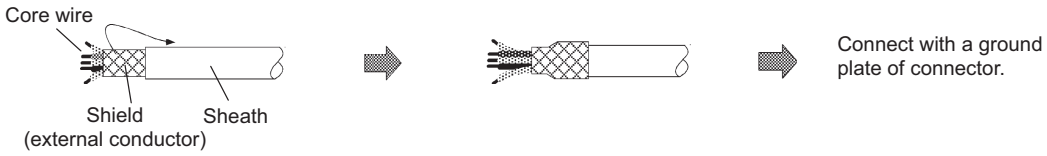


Core identification

Pair No.	Insulator color	
	L1	L2
A1 ($0.5mm^2$)	Red	White
A2 ($0.5mm^2$)	Black	White
B1 ($0.2mm^2$)	Brown	Orange
B2 ($0.2mm^2$)	Blue	Green
B3 ($0.2mm^2$)	Purple	White
B4 ($0.2mm^2$)	Yellow	White

(2) Cable assembly

Assemble the cable with the cable shield wire securely connected to the ground plate of the connector.



(Note) Shield processing of battery cable is unnecessary.

(3) Battery connection cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics					
				Configura-tion	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Minimum bend radius
J14B101224-00 Two core shield cable	3.3mm	PVC	1 ($0.2mm^2$)	7strands / 0.2mm	91.2Ω/km or less	AC500V/ 1min	1000MΩ/ km or less	80°C	R33mm

(Note) The above wiring diagrams apply to both MBA405W and MBE405W.
The connection of BT can be omitted for MBE405W (incremental).

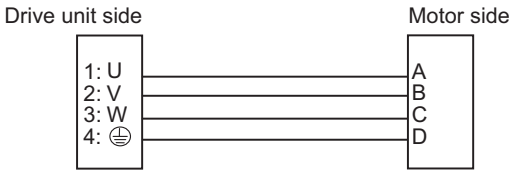
Appendix 1.3 Main Circuit Cable Connection Diagram

The methods for wiring to the main circuit are shown below.

< DRSV1/DRSV2 cable connection diagram >

These cables are used to connect the drive unit's TE1 terminal and HG, HG-H series motor.

- DRSV1 cable: This is the power line for the single-axis unit (MDS-E/EH-V1-) and dual-axis integrated unit (MDS-E/EH-V2-) L axis.
- DRSV2 cable: This is the power line for the dual-axis integrated unit (MDS-E/EH-V2-) M axis.



⚠ CAUTION

1. The main circuit cable must be manufactured by the user.
2. Refer to the section "Specification of Peripheral Devices" in Specifications Manual when selecting the wire material.
3. Lay out the terminal block on the drive unit side as shown in "DRIVE SYSTEM DATA BOOK".
4. Refer to "DRIVE SYSTEM DATA BOOK" for details on the motor's connectors and terminal block.

Appendix 2

Restrictions for Lithium Batteries

Appendix 2.1 Restriction for Packing

When transporting lithium batteries with means such as by air transport, measures corresponding to the United Nations Dangerous Goods Regulations (hereafter called "UN Regulations") must be taken.
The UN Regulations classify the batteries as dangerous goods (Class 9) or not dangerous goods according to the lithium metal content. To ensure safety during transportation, lithium batteries (battery unit) directly exported from Mitsubishi are packaged in a dedicated container (UN package) for which safety has been confirmed.
When the customer is transporting these products with means subject to the UN Regulations, such as air transport, the shipper must follow the details explained in the section "Transportation Restrictions for Lithium Batteries: Handling by User".
The followings are restrictions for transportation. Each restriction is specified based on the recommendation of the United Nations.

Area	Transportation method	Restriction	Special clause
World	Air	ICAO, IATA	-
World	Marine	IMO	188
United States	All (air, marine, land)	DOT	49 CFR 173.185
Europe	land	RID, ADR	-

Appendix 2.1.1 Target Products

The following Mitsubishi NC products use lithium batteries. If the lithium metal content exceeds 1g for battery cell and 2g for battery, the battery is classified as dangerous good (Class9).
In order to avoid an accidental actuation during the transportation, all lithium battery products incorporated in a machinery or device must be fixed securely and must be shipped with wrapped over the outer package as to prevent damage or short-circuits.

(1) Materials falling under Class 9

Mitsubishi type (Type for arrangement)	Battery type	Lithium metal content	Number of incorporated batteries	Application (Data backup)	Battery class	Outline dimension drawing
CR23500SE-CJ5	CR23500SE-CJ5	1.52g	-	For NC SRAM (M500)	Battery cell	Refer to "Battery Option" in the specification manual for drive unit you are using for the outline dimension drawing for servo.

(2) Materials not falling under Class 9

Mitsubishi type (Type for arrangement)	Battery type	Lithium metal content	Number of incorporated batteries	Application (Data backup)	Battery class	Outline dimension drawing
CR2032 (for built-in battery)	CR2032	0.067g	-	For NC SRAM/	Battery cell	Refer to "Battery Option" in the specification manual for drive unit you are using for the outline dimension drawing for servo.
CR2450 (for built-in battery)	CR2450	0.173g	-	For NC SRAM		
ER6, ER6V series (for built-in battery)	ER6, ER6V	0.65g	-	For NC SRAM/ servo encoder		
A6BAT(MR-BAT)	ER17330V	0.48g	-	For servo encoder		
Q6BAT	Q6BAT	0.49g	-	For NC SRAM		
MDS-BAT6V1SET	2CR17335A	1.2g	2	For servo encoder	Battery	
MR-BAT6V1SET						

(Note) If the number of batteries exceeds 24 batteries for the battery cell or 12 batteries for the battery, the dedicated packing (for materials falling under Class 9) is required.

Appendix 2.1.2 Handling by User

The shipper must confirm the latest IATA Dangerous Goods Regulations, IMDG Codes and laws and orders of the corresponding export country.
These should be checked by the company commissioned for the actual transportation.

IATA: International Air Transport Association
http://www.iata.org/
IMDG Code: A uniform international code for the transport of dangerous goods by seas determined by IMO (International Maritime Organization).
http://www.imo.org/

Appendix 2.1.3 Reference

Refer to the following materials for details on the regulations and responses.
Guidelines regarding transportation of lithium batteries and lithium ion batteries
Battery Association of Japan
http://www.baj.or.jp/e/

Appendix 2.2 Products Information Data Sheet (ER Battery)

MSDS system does not cover the product used in enclosed state. The ER battery described in this section applies to that product.
This description is applied to the normal use, and is provided as reference but not as guarantee.
This description is based on the lithium battery's (ER battery) hazardous goods data sheet (Products Information Data Sheet) which MITSUBISHI has researched, and will be applied only to the ER batteries described in "Transportation Restrictions for Lithium Batteries: Restriction for Packing".

(1) Outline of hazard

Principal hazard and effect	Not found.
Specific hazard	As the chemical substance is stored in a sealed metal container, the battery itself is not hazardous. But when the internal lithium metal attaches to human skin, it causes a chemical skin burn. As a reaction of lithium with water, it may ignite or forms flammable hydrogen gas.
Environmental effect	Not found.
Possible state of emergency	Damages or short-circuits may occur due to external mechanical or electrical pressures.

(2) First-aid measure

Inhalation	If a person inhales the vapor of the substance due to the battery damage, move the person immediately to fresh air. If the person feels sick, consult a doctor immediately.
Skin contact	If the content of the battery attaches to human skin, wash off immediately with water and soap. If skin irritation persists, consult a doctor.
Eye contact	In case of contact with eyes due to the battery damage, rinse immediately with a plenty of water for at least 15 minutes and then consult a doctor.
Ingestion	If swallowed, consult a doctor immediately.

(3) Fire-fighting measure

Appropriate fire-extinguisher	Dry sand, dry chemical, graphite powder or carbon dioxide gas
Special fire-fighting measure	Keep the battery away from the fireplace to prevent fire spreading.
Protectors against fire	Fire-protection gloves, eye/face protector (face mask), body/skin protective cloth

(4) Measure for leakage

Environmental precaution	Dispose of them immediately because strong odors are produced when left for a long time.
How to remove	Get them absorbed into dry sand and then collect the sand in an empty container.

(5) Handling and storage

Handling	**Cautions for safety handling**	Do not peel the external tube or damage it. Do not dispose of the battery in fire or expose it to heat. Do not immerse the battery in water or get it wet. Do not throw the battery. Do not disassemble, modify or transform the battery. Do not short-circuit the battery.
Storage	**Appropriate storage condition**	Avoid direct sunlight, high temperature and high humidity. (Recommended temp. range: +5 to +35C°, humidity: 70%RH or less)
	Material to avoid	Flammable or conductive material (Metal: may cause a short-circuit)

(6) Physical/chemical properties

Appearance	**Physical form**	Solid
	Shape	Cylinder type
	Smell	Odorless
	pH	Not applicable (insoluble)
	Boiling point/Boiling range, Melting point, Decomposition temperature, Flash point	No information

(7) Stability and reactivity

Stability	Stable under normal handling condition.
Condition to avoid	Do not mix multiple batteries with their terminals uninsulated. This may cause a short-circuit, resulting in heating, bursting or ignition.
Hazardous decomposition products	Irritative or toxic gas is emitted in the case of fire.

(8) Toxicological information

As the chemical substance is stored in a sealed metal container, the battery has no harmfulness. Just for reference, the table below describes the main substance of the battery.

< Lithium metal >

Acute toxicity	No information
Local effect	Corrosive action in case of skin contact

< Thionyl chloride >

Acute toxicity	Lc_{50}: 500ppm (inhaled administration to rat)
Local effect	The lungs can be damaged by chronic cough, dyspnea and asthma.

< Aluminum chloride >

Acute toxicity	L_{D50}: 3700ppm (oral administration to rat)
Local effect	Not found.

< Lithium chloride >

Acute toxicity	L_{D50}: 526ppm (oral administration to rat)
Local effect	The central nerves and kidney can be influenced.

< Carbon black >

Acute toxicity	L_{D50}: 2,000mg/kg > (rat)
Carcinogenicity	LARC group 2 (suspected of being carcinogenic)

(9) Ecological information

Mobility, Persistence/ Decomposability, Bio-accumulation potential, Ecological toxicity	Not found.

(10) Caution for disposal

Dispose of the battery following local laws or regulations.

Pack the battery properly to prevent a short-circuit and avoid contact with water.

Appendix 2.3 Forbiddance of Transporting Lithium Battery by Passenger Aircraft Provided in the Code of Federal Regulation

This regulation became effective from Dec.29, 2004. This law is a domestic law of the United States, however it also applies to the domestic flight and international flight departing from or arriving in the United States. Therefore, when transporting lithium batteries to the United State, or within the United State, the shipper must take measures required to transport lithium batteries. Refer to the Federal Register and the code of Federal Regulation for details.
When transporting primary lithium battery by cargo aircraft, indicate that transportation by passenger aircraft is forbidden on the exterior box.
"Lithium Metal batteries forbidden for transport aboard Passenger aircraft"

Appendix 2.4 California Code of Regulation "Best Management Practices for Perchlorate Materials"

When any products that contain primary lithium batteries with perchlorate are shipped to or transported through the State of California, they are subject to the above regulation.The following information must be indicated on the package, etc. of the products that contain primary lithium batteries (with a perchlorate content of 6 ppb or higher).
"Perchlorate Meterial-special handling may apply. See http://www.dtsc.ca.gov/hazardouswaste/perchlorate"

Appendix 2.5 Restriction Related to EU Battery Directive

EU Battery Directive (2006/66/EC) has been enforced since September 26th in 2008. Hereby, battery and machinery incorporating battery marketed in European Union countries must be in compliance with the EU Battery Directive. Lithium battery provided by MITSUBISHI are subjected to this restriction.

Appendix 2.5.1 Important Notes

Follow the instruction bellow as shipping products incorporating MITSUBISHI device.

(1) When shipping products incorporating MITSUBISHI device any time later than September 26th, 2008, the symbol mark shown as Figure 1 in section "Information for End-user" is required to be attached on the machinery or on the package. Also, the explanation of the symbol must be added.

(2) Machinery with battery and maintenance battery produced before the EU Battery Directive are also subjected to the restriction. When shipping those products to EU countries later than September 26th, 2008, follow the instruction explained in (1).

Appendix 2.5.2 Information for End-user

Figure 1

Note: This symbol mark is for EU countries only.

This symbol mark is according to the directive 2006/66/EC Article 20 Information for end-users and Annex II.

Your MITSUBISHI ELECTRIC product is designed and manufactured with high quality materials and components which can be recycled and/or reused. This symbol means that batteries and accumulators, at their end-of-life, should be disposed of separately from your household waste.

If a chemical symbol is printed beneath the symbol shown above, this chemical symbol means that the battery or accumulator contains a heavy metal at a certain concentration. This will be indicated as follows:Hg: mercury (0,0005%), Cd: cadmium (0,002%), Pb: lead (0,004%)

In the European Union there are separate collection systems for used batteries and accumulators. Please, dispose of batteries and accumulators correctly at your local community waste collection/recycling centre.

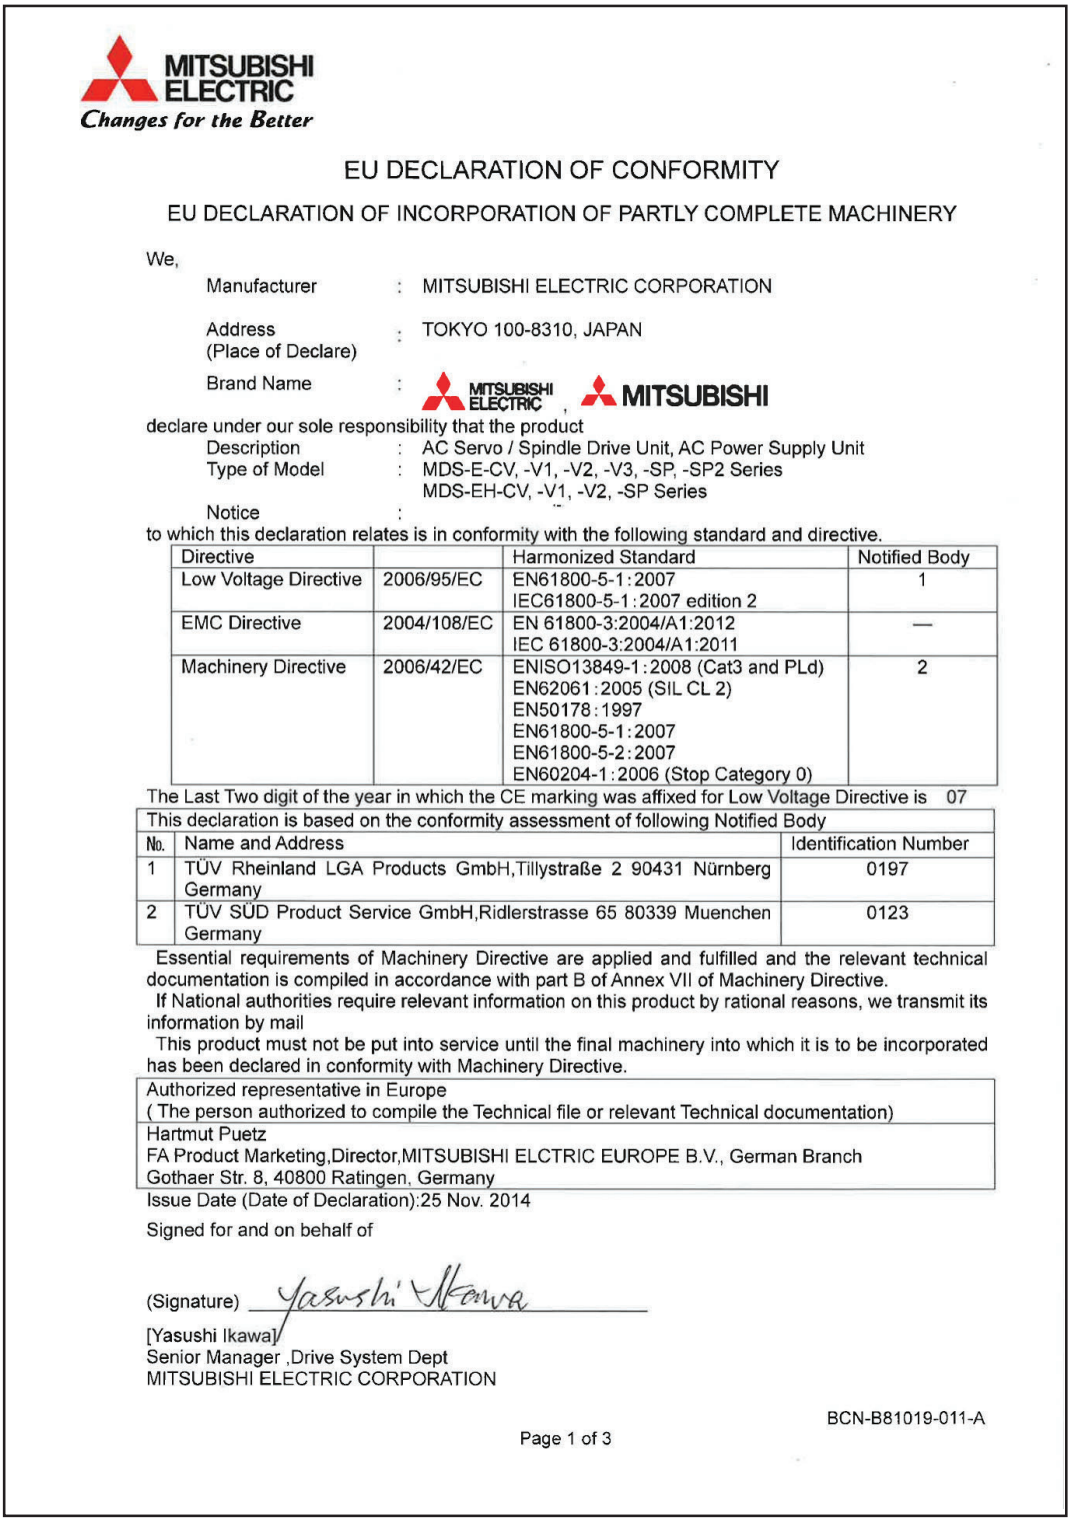
Please, help us to conserve the environment we live in!

Appendix 3

EC Declaration of Conformity

Appendix 3.1 EC Declaration of Conformity

Each series can respond to LVD and EMC and Machinery directive. Approval from a third party certification organization has been also acquired for the Low Voltage Directive.
The declaration of conformity of each unit is shown below.



MITSUBISHI ELECTRIC
Changes for the Better

EU DECLARATION OF CONFORMITY

EU DECLARATION OF INCORPORATION OF PARTLY COMPLETE MACHINERY

We,

Manufacturer : MITSUBISHI ELECTRIC CORPORATION

Address (Place of Declare) : TOKYO 100-8310, JAPAN

Brand Name : MITSUBISHI ELECTRIC , MITSUBISHI

declare under our sole responsibility that the product

Description : AC Servo / Spindle Drive Unit, AC Power Supply Unit
Type of Model : MDS-E-CV, -V1, -V2, -V3, -SP, -SP2 Series
MDS-EH-CV, -V1, -V2, -SP Series
Notice :

to which this declaration relates is in conformity with the following standard and directive.

Directive		Harmonized Standard	Notified Body
Low Voltage Directive	2006/95/EC	EN61800-5-1:2007 IEC61800-5-1:2007 edition 2	1
EMC Directive	2004/108/EC	EN 61800-3:2004/A1:2012 IEC 61800-3:2004/A1:2011	—
Machinery Directive	2006/42/EC	ENISO13849-1:2008 (Cat3 and PLd) EN62061:2005 (SIL CL 2) EN50178:1997 EN61800-5-1:2007 EN61800-5-2:2007 EN60204-1:2006 (Stop Category 0)	2

The Last Two digit of the year in which the CE marking was affixed for Low Voltage Directive is 07

This declaration is based on the conformity assessment of following Notified Body

No.	Name and Address	Identification Number
1	TÜV Rheinland LGA Products GmbH,Tillystraße 2 90431 Nürnberg Germany	0197
2	TÜV SÜD Product Service GmbH,Ridlerstrasse 65 80339 Muenchen Germany	0123

Essential requirements of Machinery Directive are applied and fulfilled and the relevant technical documentation is compiled in accordance with part B of Annex VII of Machinery Directive.
If National authorities require relevant information on this product by rational reasons, we transmit its information by mail
This product must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with Machinery Directive.

Authorized representative in Europe
(The person authorized to compile the Technical file or relevant Technical documentation)
Hartmut Puetz
FA Product Marketing,Director,MITSUBISHI ELCTRIC EUROPE B.V., German Branch
Gothaer Str. 8, 40800 Ratingen, Germany

Issue Date (Date of Declaration):25 Nov. 2014

Signed for and on behalf of

Appendix 4

Instruction Manual for Compliance with UL/c-UL Standard

The instructions of UL/c-UL listed products are described in this manual.
The descriptions of this manual are conditions to meet the UL/c-UL standard for the UL/c-UL listed products. To obtain the best performance, be sure to read this manual carefully before use.
To ensure proper use, be sure to read specification manual, connection manual and maintenance manual carefully for each product before use.

Appendix 4.1 Operation Surrounding Air Ambient Temperature

The recognized operation ambient temperature of each unit are as shown in the table below. The recognized operation ambient temperatures are the same as an original product specification for all of the units.

Classification	Unit name	Operation ambient temperature
AC servo/spindle system	Power supply unit, AC Reactor	0 to 55°C
	Servo, Spindle drive unit	0 to 55°C
	Power Backup unit	0 to 55°C
	Option unit, Battery unit	0 to 55°C
	Servo motor, Spindle motor	0 to 40°C

Appendix 4.2 Notes for AC Servo/Spindle System

Appendix 4.2.1 Warning

It takes 15 minutes maximum to discharge the bus capacitor.
When starting wiring or inspection, shut the power off and wait for more than 15 minutes to avoid a hazard of electrical shock.

Appendix 4.2.2 Installation

MDS-E/EH/EJ/EJH Series are UL/c-UL listed "open type" drives and must be installed into an end-use electrical enclosure.
The minimum enclosure size is based on 150 percent of each MDS-E/EH/EJ/EJH Series are installed a pollution degree 2 environment.
And also, design the enclosure so that the ambient temperature in the enclosure is 55°C (131°F) or less, refer to the specifications manual.

Appendix 4.2.3 Short-circuit Ratings (SCCR)

Suitable for use in a circuit capable of delivering not more than 100kA rms symmetrical amperes, 480 volts maximum. (MDS-E-CV, MDS-EJ are suitable for use in a circuit capable of delivering 240 volts maximum, MDS-EH-CV, MDS-EJH suitable for use in a circuit capable of delivering 480 volts maximum.)

Appendix 4.2.4 Over-temperature Protection for Motor

Motor Over temperature sensing is not provided by the drive.

Appendix 4.2.5 Peripheral Devices

To comply with UL/c-UL Standard, use the peripheral devices which conform to the corresponding standard.

Circuit Protector for spindle motor Fan

Select the Circuit Protector by doubling the spindle motor fan rated.
A rush current that is approximately double the rated current will flow, when the fan is started.

< Notice >

- For installation in United States, branch circuit protection must be provided, in accordance with the National Electrical Code and any applicable local codes.
- For installation in Canada, branch circuit protection must be provided, in accordance with the Canadian Electrical Code and any applicable provincial codes.

Appendix 4.2.6 Field Wiring Reference Table for Input and Output (Power Wiring)

Use the UL-approved round crimping terminals to wire the input and output terminals of each unit. Crimp the terminals with the crimping tool recommended by the terminal manufacturer. Please protect terminal ring by the insulation cover. Following described crimping terminals and tools type are examples of Japan Solderless Terminal Mfg. Co., Ltd. This wire size is each unit maximum rating. The selection method is indicated in each specification manual.

PE (⏚)

Unit Type	**MDS-EJ-V1-**	10 to 80	100
	MDS-EJH-V1-	10 to 40	---
Wire Size (AWG)/Temp Rating Note 1		#14/60 or 75°C	#14/60 or 75°C
Crimping Terminals Type		R2-4	R5.5-4
Crimping Tools Type		YHT-2210	YHT-2210

(Note 1) 60°C: Polyvinyl chloride insulated wires (IV).
75°C: Grade heat-resistant polyvinyl chloride insulated wires (HIV).
Use copper wire only.
Above listed wire are for use in the electric cabinet on machine or equipment.

(Note 2) Select the wire size according to the motor's rated current.

(4) Option Unit : Dynamic Brake Unit (MDS-D-DBU)

Type	**MDS-D-DBU**	
Terminal Screw Size	**U, V, W, ⏚**	M4
	Torque [lb in/ N m]	10.6/1.2

TE1 (U, V, W, ⏚)

Unit Type	**MDS-D-DBU**
Wire Size (AWG) /Temp Rating Note 1	#10/75°C
Crimping Terminals Type	R5.5-4
Crimping Tools Type	YHT-2210

(Note 1) 75°C: Grade heat-resistant polyvinyl chloride insulated wires (HIV).
Use copper wire only.
Above listed wire are for use in the electric cabinet on machine or equipment.

(Note 2) Select the wire size according to the motor's rated current.

(5) AC Reactor (D/DH-AL)

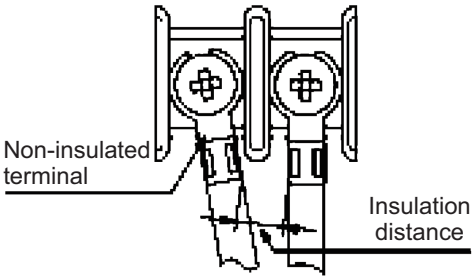
Type	**D-AL-**	7.5K, 11K	18.5K to 45K	55K
	DH-AL-	7.5K, 11K	18.5K to 75K	---
Terminal Screw Size	**L11, L12, L13, L21, L22, L23**	M5	M6	M10
	Torque [lb in/ N m]	17.7/2.0	35.4/4.0	97.3/11.0

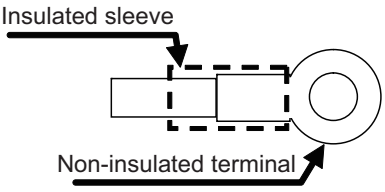
Input/Output (L11, L12, L13, L21, L22, L23)

The wire connected with AC Reactor becomes same size as TE1 of the selected Power supply unit.

(6) Notes of Round Crimping Terminals and Terminal Block

The non-insulation ring tongue must have the insulated sleeving described below to prevent electric shock. The insulated sleeve must be provided with SUMITOMO ELECTRIC FINE POLYMER INC. (File No.: E48762, Catalogue No.: SUMITUBE F(Z) or 939) per the illustration below.





Appendix 4.2.7 Motor Over Load Protection

Spindle drive unit MDS-E/EH-SP/SP2 Servo drive unit MDS-E/EH-V1/V2/V3, MDS-EJ/EJH series have each solid-state motor over load protection. (The motor full load current is the same as rated current.)

When adjusting the level of motor over load, set the parameter as follows.

(1) MDS-E/EH-SP/SP2, MDS-EJ-SP (Spindle drive unit)

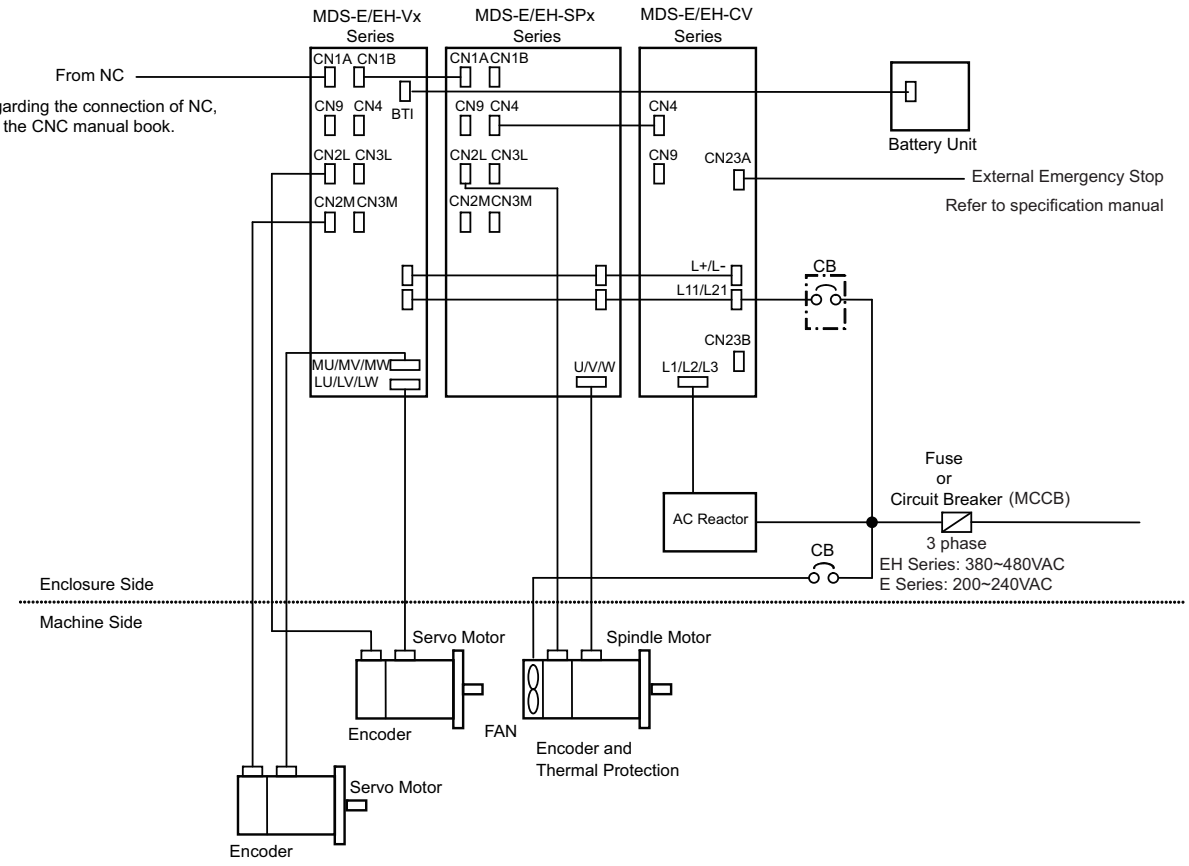
Parameter No.	Parameter abbr.	Parameter Name	Setting Procedure	Standard Setting Value	Setting Range
SP021	OLT*	Overload time constant	Set the time constant for overload detection. (Unit: 1 second.)	60s	0 to 15300s
SP022	OLL	Overload detection level	Set the overload current detection level with a percentage (%) of the rating.	120%	1 to 200%

(2) MDS-E/EH-V1/V2/V3, MDS-EJ/EJH-V1 (Servo drive unit)

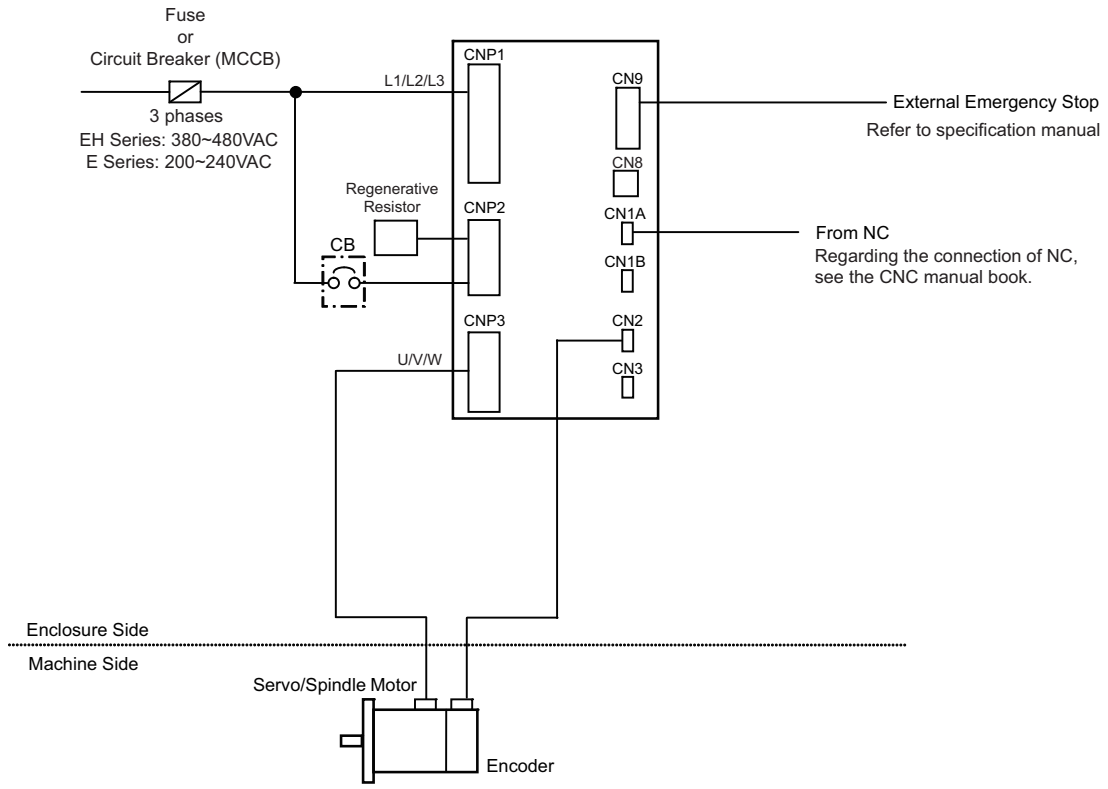
Parameter No.	Parameter abbr.	Parameter Name	Setting Procedure	Standard Setting Value	Setting Range
SV021	OLT	Overload time constant	Set the time constant for overload detection. (Unit: 1 second.)	60s	1 to 300s
SV022	OLL	Overload detection level	Set the overload current detection level with a percentage (%) of the stall rating.	150%	1 to 500%

Appendix 4.3 AC Servo/Spindle System Connection

Appendix 4.3.1 MDS-E/EH-Vx/SP Series



Appendix 4.3.2 MDS-EJ/EJH-V1/SP Series



Revision History

Date of revision	Manual No.	Revision details
Feb. 2015	IB(NA)1501226-A	First edition created.
May. 2015	IB(NA)1501226-B	- "Precautions for Safety" was revised. - Resolutions of encoders D48/D51/D74 were changed. - SJ-DG Series spindle motors were added. - "Explanation of Type" was revised. - "Specifications List" in "Servo Motor" was revised. - "Specifications" and "Output Characteristics" in "Spindle Motor" were revised. - "Servo Drive Unit", "Spindle Drive Unit", "Power Supply Unit", and "AC Reactor" in "Drive Unit" were revised. - "Explanation of Each Part" was revised. - "Function Specifications List" was revised. - "Speed Command Synchronous Control" was revised. - The pictures of NC in following chapters were changed to the ones of M800. "OMR-FF Control", "STO (Safe Torque Off) Function", "SBC (Safe Brake Control) Function", "Deceleration and Stop Function at Power Failure", and "Retraction Function at Power Failure". - "Motor Brake Control Function" was revised. - "Dynamic Brake Characteristics" was revised. - "Shaft Characteristics" in "Spindle Motor" was revised. - "Servo Options" was revised. - "Battery Option (MDS-BAT6V1SET, MDSBTBOX-LR2060)" was revised. - "Machine Side Encoder" was revised. - Example of wiring was added to "Serial Output Interface Unit for ABZ Analog Encoder MDS-B-HR". - "Side Protection Cover" was added. - "List of Cables and Connectors" was revised. - "Example of Wires by Unit" was revised. - "Relay" was revised. - "Wire Size for L+ and L- Link Bar" was revised. - "Calculation of Spindle Output" was revised. - "Cable and Connector Specifications" was revised. - "Restrictions for Lithium Batteries" was revised. - "Instruction Manual for Compliance with UL/c-UL Standard" was added. - Miswrite is corrected.
Mar. 2016	IB(NA)1501226-C	- Revisions were made to support MDS-E-V3 Series. - Specification descriptions of servo motor HG75, HG105, HG-H75, and HG-H105 were added. - Servo motor HG46, HG56, HG96, and HG-H1502 were added. - The encoder D47 was added. - The following spindle motors were deleted. SJ-VS7.5-14FZT,SJ-VKS26-09FZT,SJ-VKS30-16FZT,SJ-VLS15-11FZT, SJ-4-V3.7-05ZT,SJ-4-V11-23ZT,SJ-4-V15-18T,SJ-4-V37-04ZT, SJ-4-V11-21T,SJ-4-V18.5-17T - Descriptions for tool spindle motor were added. - "Precautions for Safety" was revised. - "System Configuration" was revised. - "Explanation of Type" was revised.

Date of revision	Manual No.	Revision details
Mar. 2016	IB(NA)1501226-C	- "Tool Spindle Motor Type" was added. - "Specifications List" and "Torque Characteristics" in "Servo Motor" were revised. - "Specifications" and "Output Characteristics" in "Spindle Motor" were revised. - "Tool Spindle Motor" was added. - "Servo Drive Unit", "Spindle Drive Unit", "Power Supply Unit", "Unit Outline Dimension Drawing" and "Explanation of Each Part" were revised. - Function Specifications List was revised. - "Real-time Tuning I" was added. - "Retraction Function at Power Failure" was revised. - "External Emergency Stop Function" was revised. - "Drive Unit Diagnosis Display Function" was added. - "Quakeproof Level" and "Shaft Characteristics" in "Servo Motor" were revised. - "Oil / Water Standards", "Installation of Servo Motor", "Overload Protection Characteristics", "Magnetic Brake", "Dynamic Brake Characteristics" were revised. - "Shaft Characteristics" and "Machine Accuracy" in "Spindle Motor" were revised. - "Installation of Spindle Motor" was revised. - "Heating Value" and "Drive Unit Arrangement" was revised. - "Servo Options" was revised. - "Battery Option (MDS-BAT6V1SET, MDSBTBOX-LR2060)" was revised. - "Ball Screw Side Encoder (OSA405ET2AS, OSA676ET2AS)" was revised. - "Spindle Side PLG Serial Output Encoder (TS5690, MU1606 Series)" was revised. - "Serial Output Interface Unit for ABZ Analog Encoder MDS-B-HR" was revised. - "DC Connection Bar" was revised. - "Cable Connection Diagram", "List of Cables and Connectors" and "Optical Communication Cable Specifications" were revised. - "Example of Wires by Unit" was revised. - "Selection of Contactor" was revised. - "Selection of Earth Leakage Breaker", "Surge Absorber" and "Selection of Link Bar" were revised. - "Selection of the Power Supply Unit" was revised. - "Brake Cable and Connector" was revised. - "Connector for Drive Unit" and "Connector for Servo" were revised. - "Instruction Manual for Compliance with UL/c-UL Standard" was revised. - "Global service network" was revised. - Miswrite is corrected.
